this color being beneath the skin. They gradually waste away until scarcely any flesh is left, this is more noticeable on the breast bone, which becomes almost bare of flesh. There are no symptoms of cold, roup or canker and the birds retain their appetite to the last. They linger for weeks or months unless killed, but never recover. These chickens apparently had a good chance. They were liberally fed, housed in colony houses and not crowded. Part were in a yard of about two acres planted to corn and asparagus, with some apple trees for shade. This was new ground for chickens. The rest had the run of the farm where chickens had been kept for years. The houses were cleaned and disinfected before the chickens were put in. I opened some of the affected birds but could see nothing abnormal. As I wish to continue in the business I would like to know how to prevent a recurrence of the disease, if it is a disease. Also whether it is contagious thru the ground or only from individual to individual. Is it safe to breed from flocks that have lost part of their number from this trouble? I have been told that the trouble might be coccidiosis, but that does not seem to be discussed in any work I have on poultry diseases. Will be glad to have any information you can give.

Northboro, Mass. H. F. A.

A. This is one of the cases that is not possible to diagnose without seeing the birds and looking over the premises. We should send some of the affected birds to the State Station at Amherst for laboratory diagnosis. Coccidiosis in chickens is a disease caused by a parasitic protozoan organism. By some this *coccidia* is blamed for white diarrhoea and also for "blackhead" in turkeys and fowls. If your birds had coccidiosis, which is a contagious disease of intestines and liver, we would expect to find you reporting the symptom diarrhoea; but you do not mention any diarrhoea. Where fowls and chickens contract this disease they usually get it from infected turkeys, or from fouled soil where diseased turkeys have run. The wasting of flesh and blue or purple tinge to comb and skin is observed in other contagious (usually parasitic) diseases where intestines, liver or lungs are seriously involved. Certainly would not breed from any part of that flock. Would clean up and thoroly disinfect the poultry quarters and would dress that land well with air slaked lime this winter and plow it deep in spring. Crop it well to sweeten it. Would not use any surface water, or water from brook or river in your neighborhood, for watering stock. The infection is probably thru contaminated drinking water or food, and from the soil. Fowls are such careless and voracious feeders that they usually mix in a lot of earth and other dirt with their food. If possible, after thoro disinfection and whitewashing of poultry houses, would move them to a part of farm not used before by poultry. Would like a further report.

Warm Water—Get Eggs

A Little Putnam Stove keeps water for poultry unfrozen in zero weather; 9 inches diameter, 4 inches high; holds 3 pints of oil and burns a month without refilling; never needs trimming; prevents frosted combs; increased eggs pay for stove in 30 days; fire proof. Most useful poultry appliance ever sold. Each \$1.50, six for \$8.00, postpaid. Satisfaction or money back.

I. Putnam, Route 105, Elmira, N. Y.

OWEN FARMS

WHITE LEGHORNS

At the Great Boston Show, 1916

1st and 2nd Cockerel; 1st, 3rd and 6th Pen; 2nd, 3rd and 5th Pullet; 3rd, 5th and 6th Cock; special for best three Cockerels and best three Pullets.

BUFF ORPINGTONS

At Boston, 1916

1st, 3rd and 5th Cock; 2nd and 3rd Hen; 1st Cockerel; 1st, 2nd and 3rd Pullet; 1st and 4th Pen, and all specials. Note—Madison Square 1st and 2nd winning Buffs were not shown at Boston.

S. C. R. I. REDS

At Boston

In best class of the year, won First Collection, Special for three best Cockerels, and three best Pullets, repeating their 1915 winnings at Boston of these same specials. In 1915 they also won 1st Cockerel, 1st Hen and 1st Pen.

White Plymouth Rocks

I am not showing White Rocks anywhere this winter. My sales in this variety have been the largest in the history of the Farms and my customers have won splendidly. The winnings of the flock during years past have well established their ABSOLUTE SUPREMACY and my 1916 Matings will produce birds that will maintain this position.

Breeding Males

February and March are the months for finishing your matings for the 1916 season. Some of your males have developed faults you will not tolerate. Some of your females are disappointing. I can still furnish superb breeding males from noted sires that will strengthen your matings. Write me carefully and accurately your weakest points, where you are strong and about what you wish to pay. I will then tell you frankly if I have the bird to help you and with equal frankness if I fail to find him in my flock. This real interest in the success of every customer has been the strongest factor in building up Owen Farms' business.

Breeding Females

Perhaps you have a superb male with only one or two females that are exactly what you want to mate with him. I have a grand lot of choice females to spare and among them may be the exact birds you need to complete the best mating you ever put together. Try me and see. Will be glad to give all the necessary time to carefully consider your requirements and tell you what I have.

Breeding Pens

Owen Farms has always made a special effort to mate for best results every breeding pen sold. The nicking of blood lines has been just as carefully considered as in our own mating. This personal service has made hosts of permanent customers and you can easily make it yours. Let me quote you, whether you need a utility mating, a good mating, a choice mating or the best mating I will sell. There are no flocks in existence that have been more carefully line bred than have mine and there is no guess work when Mr. Davey or the writer mates a pen for a customer.

Owen Farms' Flocks are Established

They are years beyond the experimental stage and have been the foundation blood of most of the really successful breeders in the country. Very few really good flocks exist that do not have more or less Owen Farms blood. My birds have made good for others and will start you on an equal fighting basis and save you many years uphill work. TRY THEM YOURSELF.

UTILITY QUALITIES

Owen Farms birds are famous the country over for size, bone, perfect health, vigor, prepotency and heavy laying qualities. There are no birds that excel them in these important functions and very few flocks anywhere near as good.

Satisfaction Guaranteed Every Customer Every Time

I do not want any customer to keep a bird that does not please him, and any bird I ship can be sent back after a forty-eight hours' rest and the purchase money will be promptly refunded. I will pay the return expressage on males at \$10.00 or more each and on females at \$5.00 or more each.

Good Things for Everybody

Helen F. Woods
Editor

"All day the wind has whispered tales about the old home range,
And I, a lonely maverick, am crying for a change
Shall we pull up our picket pins, and coil the cattle rope,
Then hit the trail and follow it adown the western slope?
This city life may be all right for those whose eyes are blind,
Or those who never see beyond the daily, dulling grind,
But herding round a snubbing post from eight till half past five
Has never kept the outdoor heart of vagabonds alive.

Here every man is for himself, the devil for them all,
And few have pity for the weak who by the wayside fall.
They're branded with the city's iron, in body, heart and soul,
On every hand I see them strive with money for their goal.
So outward where the sun goes down is room for you and me,
For there the men are what their God intended they should be.
This old corral is far too small for near six feet of brown.
So let us take the Western trail before another dawn.
And all we'll ask of future years is that our feet may stray
Along some sun-kissed range, until the final roundup day."

DURING the past year frequent mention has been made here as to the educational worth of reading aloud in the family circle. In planning a course of reading for this purpose, a great deal must be taken into consideration, as most families are of diversified ages, as well as tastes.

First of all, it should be understood that the reading is chiefly for the benefit of the children. There are those who are not alone wholly unfitted but equally unwilling to devote time or thought to the instruction of their children, but in such cases the children are not the only losers.

We have had some most interesting letters from readers on this subject and some very wise suggestions in regard to courses of reading. One letter, however, takes exception to the suggestion that the reading aloud of books aimed to in-

terest children may prove of equal interest to the older members of the family.

In many instances the intellectual powers of children are seriously underestimated. The reading of any number of meaningless books will not arouse the passive thoughts of a child into activity. What the children need in the matter of reading is a spur to thought, and this is just as true of their elders. There is no particular delight in reading matter which gives no opportunity for mental exertion. The criterion by which juvenile literature should be judged is that of holding the adult's interest. A juvenile book which will not interest adults is not worth publishing. When we get right down to the matter, it is really difficult to find other than certain scientific and professional books over the heads of the average wide-

awake child. One of the greatest drawbacks to the general education of the masses of children has been the lack of worth while literature dealt out to children.

As an experiment, a mother tried reading certain of Shakespeare's plays to her children (ages seven to eleven). The interest displayed was as marked, if not more so, than in any juvenile story she had read them. While reading Mark Anthony's Oration from Julius Caesar, the seven-year-old daughter voiced her regret that there were "no pictures of it, as it would make such a good one."

In this matter of reading to children, it is not only useless but actually harmful to their mental development to wade thru a lot of silly and meaningless so-called "juvenile literature." There are juvenile classics, and these will prove of interest to adults as well as children for all time, but books intended for childhood and lacking this interest, are not worth the time spent in reading them. Make it a rule to read over the child's head rather than under, and you will awaken undreamed of depths in the child's mind. Children in the same household or family may display widely different channels in the expansion of thought or natural interest. In such cases it is not a wise plan to select all reading along that particular channel. Give them an opportunity for a wide range of thought that they may not be narrowed down to their personal likes. In this way new interests are discovered and fostered that otherwise might forever lie dormant. With these things in mind the following list of books was selected and read aloud in one family during the past year:

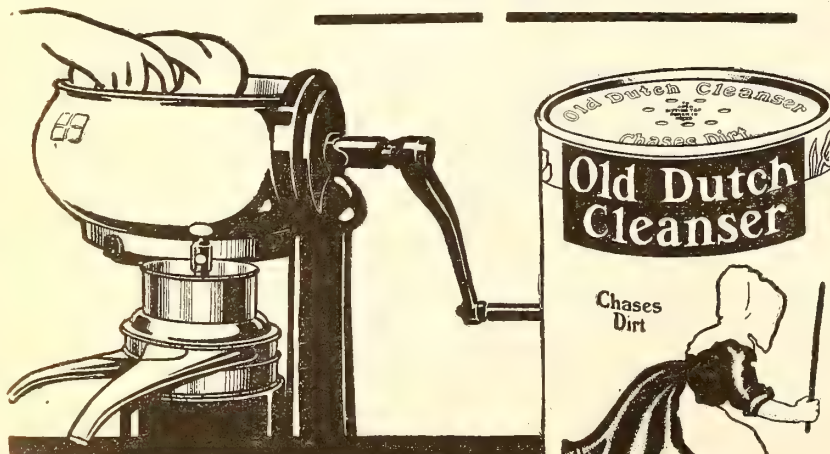

Hiawatha	Longfellow
The Life of Abraham Lincoln	Brooks
Treasure Island	Stevenson
Snowbound	Whittier
Uncle Tom's Cabin	Stow
Westward Ho	Kingsley
Before Adam	London
Two Years Before The Mast	Dana
The Man Without A Country	Hale
Abbe Constantin	Ludovic Halevy
Once Upon a Time in Delaware	Pyle
Writings of Columbus	Ford
Town and City	Jewett
History of England	Dickens
Tom Brown's School Days	Hughes
Helen's Babies	Habberton
South American Travels	Carpenter
Geographical Reader	Carpenter
Nights with Uncle Remus	Harris
The Jungle Books	Kipling
Ben Hur	Wallace
Stories of the Pilgrims	Pumphrey
The Land of the Midnight Sun	Du Chaillu
The Four Boys' Series	Tomlinson
History of the United States	Higginson
Evangeline	Longfellow
The Sketch Book	Irving
Wild Animals I Have Known	Seton Thompson
Julius Caesar	Shakespeare
Black Beauty	Sewell
Tom Sawyer	Twain
The Story of a Bad Boy	Aldrich

Old Dutch

\$22,000.00 in One Year From an Acre of Poultry

Over \$14,000.00 for Baby Chicks, All Hatched in CYCLES

EVERYONE should know my perfected way of hatching the LARGE, FLUFFY kind of chickens that come out of their shells with a determination to live, grow and make large profits for their owners. Never before has there been so many eggs laid, chickens hatched, and poultry raised on an acre of land. Our new Brooder saves half the cost, half the labor, and raises better chickens.

The following letter from Mr. Knoche refers to a shipment of Pedigree White Orpington Chickens hatched in the "Cycle" and shipped from Elmira to Des Moines, Iowa, October 26, 1915. The chickens were raised in our Brooder Coop, out-of-doors and without artificial heat at the most unfavorable season of the year for raising chickens.

THE PHILO SYSTEM Of Progressive Poultry Keeping

is unlike all other ways of keeping poultry and in many ways is exactly the reverse, accomplishing things in poultry work that have always been considered impossible, and getting unheard-of results that are hard to believe without seeing.

This new system covers all branches of the work necessary for success from selecting the breeders to marketing the products. It tells how to get eggs that will hatch, how to hatch nearly every egg, and how to raise nearly all the chicks hatched. It gives complete plans in detail how to make things necessary to run the business and at less than half the cost required to handle the poultry business in any other manner.

One of the secrets is to save the chickens that are fully developed at hatching time, whether they can crack the shell or not. It is a simple trick and believed to be the secret of the ancient Egyptians and Chinese which enabled them to sell the chicks at ten cents a dozen.

101 W. 3D St., FREDERICK, MD.,
JULY 23, 1914.

E. W. PHILO,

DEAR SIR:—I have been following your system for four years and have been very successful. This past February I had a few chicks to hatch and one chick at six weeks old weighed two and one-half pounds. I felt very proud. Last fall at the Frederick County Fair, I carried first prize and first sweepstake prize for eggs. I consider your system the root of it all.

Yours truly,
MRS. HUGH DEAN.

*Philo System Book, Postpaid, \$1.00.
Three Sets of Coop Plans from drawings showing the exact size and shape of every piece of wood, postpaid, \$1.00.*

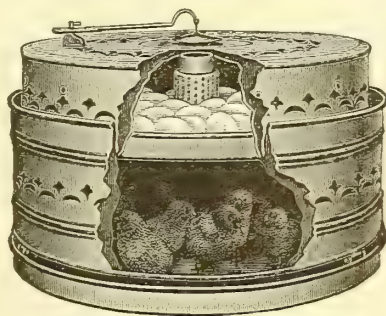

Cycle Hatcher Company.

Des Moines, Ia., Dec. 16, 1915.

Gentlemen—The chickens you sent me October 26th, are growing very fast. Although only seven weeks old they average nearly three pounds each. I have never taken the Brooder out of the coop and they are still using it. All who have seen them say they are beauties. Thanking you for your kindness, I am

Very truly yours, F. W. KNOCHE,

Send postal and get FREE copy "Poultry Profits." It tells all about the latest discoveries in the Poultry Business,

Brooder-Hatcher, complete, \$8.00

Philo System Book, 3 Sets Coop Plans, the New Book, "Farming," and a Brooder-Hatcher, complete, all for \$10.00.
If ordered direct from this advertisement I will give you a premium of Six Baby Chicks, a Brooder and Chick Feed FREE.

The "CYCLE" and "BROODER-HATCHERS" produce the LARGE, FLUFFY kind of chickens that come out of their shell with a determination to live and grow into PROFITABLE POULTRY. With these machines we find it so easy to hatch chicks that we can offer them for premiums by the thousands. The success of every poultry business is in the reproduction of the best poultry at the smallest cost. The CYCLE will help you as it is helping more than two hundred thousand poultry keepers in every section of the world. Read the following letters:

RAMONA, CAL., NOV. 6, 1915.

E. W. PHILO, ELMIRA, N. Y.
DEAR SIR:—As I am so well pleased with the ten incubators and twenty brooders ordered of you last April, I have decided to increase my plant. Enclosed you will find draft for which please send me twenty more Cycle Hatchers. Please rush. Yours truly, GEO R. COMINGS.

FARMING WITH ALFALFA And New Discoveries

The new farm book tells how to grow alfalfa successfully on nearly all kinds of land and why so many farmers have not been successful when trying to grow it. It gives advice about selecting a farm for a good investment, preparing the land, seeding, harvesting and marketing. How to convert alfalfa into cash, how to run a farm profitably without stock and at the same time keep up the fertility of the soil, or how to get the largest profits from stock raising, how to increase the milk production of a dairy without feeding grain, how to make poultry on the farm pay the largest profits, how to produce strong, fertile eggs, how to hatch and raise the chickens at the smallest cost for feed and labor, how to handle many things that often go to waste on the farm and turn them into profit, how to provide an abundance of everything good to eat for the table at a great saving in cost. Complete, easy-to-follow instructions will be furnished in book form, not a large, difficult book of theory, but a small one full of facts not generally known.

The alfalfa plant draws nitrogen from the air and fertilizer from the earth at a greater depth than can be reached by modern machinery and in greater quantities than the farmer can afford to buy, it puts new life into the soil and gathers by its own efforts the essential elements for growing plants to perfection. *Farming book, postpaid, \$1.00*

SELLERSVILLE, PA., JUNE 16, 1913.

E. W. PHILO, ELMIRA, N. Y.
DEAR SIR:—We are pleased to notify you that the Cycle Hatcher is the winner of our extensive Incubator contest, making the remarkable record of a 100 per cent hatch and the only machine in the contest that made a perfect record.

THE ITEM PUBLISHING COMPANY.

I will send you by return mail the PHILO SYSTEM BOOK, my new book, "FARMING," and three sets of COOP PLANS for \$3.00 and will give you absolutely free, SIX THOROUGHbred WHITE ORPINGTON CHICKS and BROODER. Order direct from this advertisement and I will include free of charge a package of chick food to give the PREMIUM chicks a good start. Will hold chicks for later delivery if desired. Catalog Free.

CYCLE HATCHER CO. 1686 Lake Street ELMIRA, N. Y.

Recent Inventions for Poultrymen

By Lester L. Sargent, Patent Attorney, Washington, D.C.

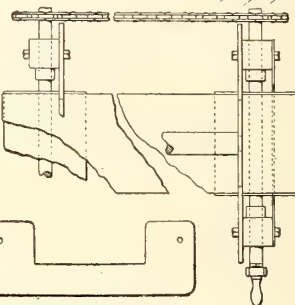

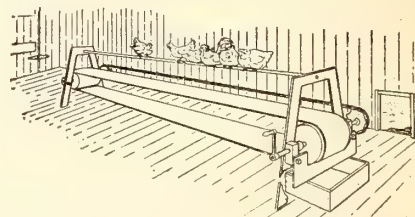

A NEW kind of poultry roost has been devised by Herbert C. Hart, Unionville, Ky. An endless belt mounted on rollers and positioned directly beneath the roost furnishes a means for quickly cleaning out. The rollers are connected by a chain and sprocket wheels which are rigid with the respective shafts of the rollers and one of them is provided with a crank. The patent is 1,165,252.

A heating attachment that can be used with the ordinary poultry drinking basin and which does not require a special form of water container has been invented by Frank C. Mosier, of Pitts-town, Pa. The attachment comprises a

bottom plate constituting a centering means, the casing on this plate, the covering for the casing and heat retaining means is usually a block of soapstone. The patent is 1,166,534.

A brooder designed to cover a large number of chicks has been patented by John F. MacKey, of Bordentown, N. J. In this brooder there is combined with a fire box, a downwardly flaring hood to form a brooder chamber. A circular drum surrounds the fire box instead of the hood and has opening communications with the interior of the hood. A cold air inlet extends to the interior of the drum. A valve in this inlet regulates

the introduction of cold air. It is automatically controlled by a thermostat. The damper to the ash box is also regulated by the thermostat to open or close.

Poultry Roost, patented December 21, 1915, by H. C. Hart, Unionville, Ky. No. 1,165,252.

as temperature conditions in the chick compartment require. Patent No. 1,166,773.

An improved drinking fountain for poultry, the invention of Frank Enos, Junior, has just been patented to the Norwich Automatic Feeder Company, of New London, Conn. The primary object of the invention is to provide a drinking cup which can be easily and quickly applied to and removed from the main reservoir. A spring attached

SEAL This Carton

AND MAIL IT AT PARCEL POST RATES

A new era has dawned for the poultryman. In the future you can seal your cartons of "hammocked eggs"—either fresh eggs or hatchlings and still send them at parcel post rates. This is a special ruling of the U. S. Postal authorities.

"Hammocked eggs" keep fresh many weeks longer. Every egg is enclosed in its own hammock of parchment paper which forms a second and stronger shell. Eggs can't break excepting in case of unusual accident. It takes no longer to

"HAMMOCK" Your Eggs

than it does to pack them in the old fashioned way. Your customers are certain to appreciate the quality-appearance of hammocked eggs and you are insured against loss—Parcel Post or Express.

FOR HATCHING you can see at a glance that Hammock cartons are exactly what you have been looking for. Each egg is held just rigidly enough to prevent vibration. Of course you can get a higher price for "hammocked" hatchlings. Special hatchling sizes.

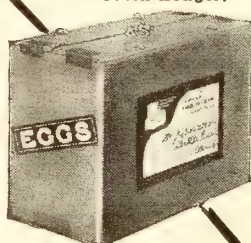

Mr. F. M. Babcock, Babcock Poultry Farm of Fredonia, N. Y., writes: "We think the Hammock Egg Carrier is the best carrier we have ever seen for carrying eggs for either hatching or market purposes."

Hammock Cartons and Reels are Returnable. They are collapsible and may be used many times over. Made in 1, 2, 3, 4 and 6-dozen sizes.

Investigate the Hammock Method. Write for our free book which explains how the Hammock system will increase your profits this year—and for many years to come.

PARKS' Barred Plym. Rocks

BRED-TO-AND-DO-LAY

1889

PARKS 200 EGG STRAIN
BRED-TO-LAY
BARRED PLYMOUTH ROCKS

1916

ARE AMERICAS' OLDEST and GREATEST LAYING STRAIN

In fact they are conceded by such men as Dr. Woods, Grant M. Curtis, Judge Schwab, Prof. Morrison, Wm. Denny and others to be the daddy laying strain of them all.

Their early history dates back to the year 1889, when a flock of 16 at that time averaged but 96 eggs each. While today they have to their credit individual records as high as 290 eggs in one year. Sworn continuous laying records up to 148 eggs. Small flock averages up to 242 eggs. While a flock of 128 averaged 208 eggs in one year and, better still, they just proved their official laying capacity by laying more eggs in the last Missouri Laying Contest than any other breed entered (The Famous English Leghorns included). In addition to making the best winter month record in the contest—and, by the way, just keep your eye on Pen No. 69 in the present contest. They stand fourth in the 100 pens, and lead all Barred Rocks by 30 eggs.

That's what over 26 years of careful, selection, trapnesting and pedigreeing for eggs has done, and not all at the sacrifice of Standard qualities, as our 18 firsts and seconds won at Elgin, Ill., Youngstown, O., Utica, N. Y., Wheeling, W. Va., and Altoona, in addition to four American Barred Rock Club Specials show. That's why our customers today include Madison Square Garden winning breeders.

Pedigreed Cockerels that transmit the lay. Foundation stock that reproduces. The above in limited numbers only, however, as stock of such quality is not produced and sold the happy-go-lucky way by the thousands. Yes, let the other fellow have your big orders, but remember us on the quality end.

Eggs that hatch, selected, \$5 per 15; \$8 per 30; \$11 per 50; \$20 per 100. Utility, \$2 per 13; \$6 per 45; \$12 per 100.

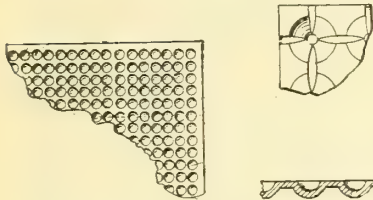

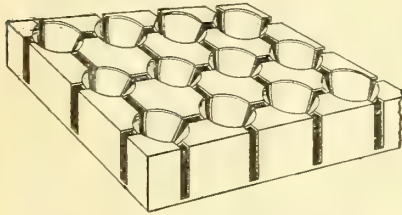

Day-Old Chicks that develop into layers. Chick, Eggs and Cockerel circulars free. Large 40-page illustrated catalog that tells all about how America's oldest and greatest laying strain has been produced, a dime.

J. W. PARKS

- Box J -

ALTOONA, PA.

to the fountain and one at its base engages from the rim of the cup, frictionally holding it in place. Owing to the necessity for cleaning poultry fountains whenever they are filled, this readily detachable cup saves the attendant much labor, as it can be readily cleaned without overturning the entire fountain. Patent No. 1,165,056.

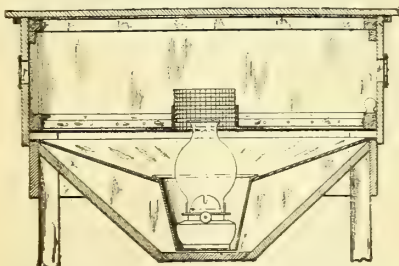

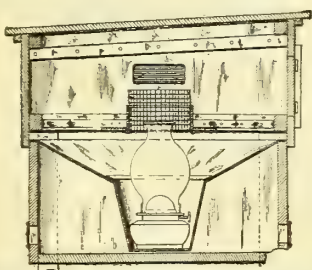

Filler for Egg Cases, patented December 21, 1915, by J. Petrich, Youngstown, Ohio. No. 1,165,204.

A new filler for egg cases has been invented by John Petrich, of Youngstown, Ohio. It is made of soft cotton rag paper and has semi-spherical cells, another inverted filler being used to complete the packing about the eggs. The particular novel feature of the device are the slots which divide the filler into cushioning elements. The patent is 1,165,204.

A new folding egg case invented by Francis F. Lee, of Lehigh, Neb., is arranged with the upper portions of the sides of the crate, hinged to the bottom of the crate so as to fold inward, overlapping one another when the device is folded in its most compact form. The patent is 1,165,885.

Elnora Irwin, of Montplier, Ind., is the inventor of a chicken brooder which can be quickly taken apart for purposes of cleaning or transportation. The lamp is centrally positioned in this brooder and communicates directly with the hover chamber. The lamp is supported within an approximately conical receiving case. Patent No. 1,165,509.

Chicken Brooder, patented December 28, 1915, by Elnora Irwin, Montplier, Ind. No. 1,165,509.

Taylor Instrument Companies,

100 Ames Street - Rochester, N. Y.

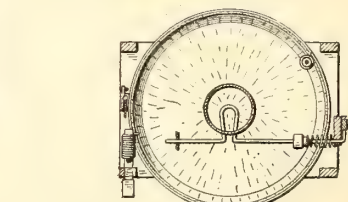

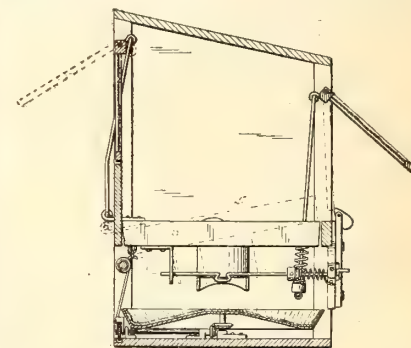

A trap-nest device invented by C. W. Mayers, of Dresden, Me., can be attached to an ordinary nest box to convert it into a trap-nest. The trap consists of a bar which is pivotally attached at its upper end to the nest box by a pivot screw and arranged to swing diagonally across the opening to the nest as soon as the hen has entered. A board or fall of irregular shape is pivoted at one side of this bar and together with a hook shaped link operates as the means for trapping the hen. The patent number is 1,165,270.

Trap Nest, patented December 21, 1915, by C. W. Mayers, Dresden, Maine. No. 1,165,270.

onally across the opening to the nest as soon as the hen has entered. A board or fall of irregular shape is pivoted at one side of this bar and together with a hook shaped link operates as the means for trapping the hen. The patent number is 1,165,270.

A trap nest of more intricate character invented by Samuel L. Denney, Lincoln University, Pa., traps the hen and also traps the egg when laid. The exit and entrance doors are operated by a depressible floor, to which they are operatively connected. The receptacle

Trap Nest, patented December 28, 1915, by S. L. Denney, Lincoln University, Pa. No. 1,166,191.

which traps the eggs beneath the portion of the nest occupied by the hen is a rotatable device. It is intermittently rotated by the depressible floor of the nest which the hen occupies. The doors to the nest automatically resets by gravity when the hen departs. The patent is 1,166,191.

Tells why chicks die

E. J. Reefer, the poultry expert, 3812 Reefer Bldg., Kansas City, Mo., is giving away free a valuable book entitled, "White Diarrhoea and How to Cure it." This book contains scientific facts on white diarrhoea and tells how to prepare a simple home solution that cures this terrible disease over night and actually raises 98 per cent of every hatch. All poultry raisers should certainly write Mr. Reefer for one of these valuable FREE books.

1000 Miles or Next Door

Makes No Difference How Far You Ship If You Use H. & D. Boxes

Ship just as far as your eggs will go without spoiling and your chicks without dying. H. & D. Boxes are built to stand hard knocks and they'll go anywhere without breaking.

They are made of double thickness jute board with corrugations that make the boxes proof against shocks and jars. The day-old chick

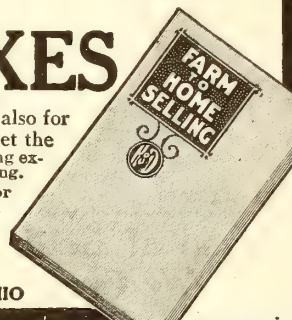

boxes have air holes so located that there is plenty of ventilation without draft. You know your shipments are safe when you use

H. & D. CHICK and EGG BOXES

We make boxes not only for poultry and eggs but also for fruit, vegetables, berries and every purpose. They meet the parcel post requirements. Their light weight keeps down shipping expenses. Fold flat and take little storage room. No sawing or nailing.

FREE BOOK "How to Pack It for Express and Parcel Post" or send 10c for "Farm to Home Selling" a valuable book which tells you the secrets of successful mail order marketing of poultry and farm produce. The book is really free because, with it, we send you a 10-cent rebate coupon good with first order.

PHILADELPHIA'S TENTH ANNUAL SHOW.

Record-breaker in Both Quality and Quantity of Birds Shown.

By EARL WHITNEY.

The tenth annual show of the Philadelphia Poultry, Pigeon and Pet Stock Association was held December 14th to 18th at the New Metropolitan Building, Philadelphia. Centering, as it does, in a hot-bed of poultry enthusiasm, Philadelphia has always maintained its prestige as one of the major shows of the country, and the tenth annual show has increased this prestige. I doubt, however, if any show has had to contend with the unusual weather conditions encountered by the Philadelphia management. Unfortunately for this splendid exhibition, the weather was so bad that only the most dyed-in-the-wool fanciers could hope to brave the storms in order to be present.

The Barred Rocks and Rhode Island Reds were unusually strong classes, although all the popular varieties were well represented. The show was one long to be remembered, not only from the standpoint of the excellent quality of the birds shown, but the fact that the quantity was there in all classes.

Following are the awards:

BARRED ROCKS—Robert J. Walden, Middleburg, Md., 1 cock, 4 hen, pit-bred male, 3-4 ckl, 5 pit, 1-3-4 ckl-bred female, 2-3 pen mated to produce Exh. Females: C. Guy Myers, Siddonsburg, Pa., 2 cock, pen, 1 ckl; C. N. Myers, Hanover, Pa., 3 cock, 1-5 hen, 5 ckl, 2-3 pit, 1-2 pit-bred

male, 1-4 pen mated to produce Exh. Females; Newton Cosh, Vineland, N. J., 4 cock, 2 hen, 1-4 pit, 5 pen; Meadowbrook Poultry Farm, Meadowbrook, Pa., 5 cock, pit-bred male, 3 hen, 1 pen; Miss M. J. Healy, Wintertur, Del., 2 ckl; Schreiber & Stewart, Philadelphia, Pa., 3 pit-bred male; S. M. Goucher, Moorestown, N. J., 2 ckl-bred female, 4 pen mated to produce Exh. Male; Ridgewood Poultry Farm, Oreland, Pa., 3 pen; Geo. E. Muth, Camden, N. J., 1-2 pen mated to produce Exh. Males; Warren Lackman, 2 pen mated to produce Exh. Males.

WHITE ROCKS—Bickmore Poultry Farm, Wallingford, Pa., 1 cock, ckl, 2 hen, pit; Meadowbrook Poultry Farm, 2 cock, pen, 5 ckl; Wood Crest Farms, Radnor, Pa., 3 cock, 4 hen; Minch Bros., Bridgeton, N. J., 4 cock, pit; Willow Brook Poultry Farm, Willow Grove, Pa., 5 cock, hen, 3 pen; Pine Grove Poultry, Farm, Halethorpe, Md., 1 hen, 2 ckl; Geo. H. L. Pettie, Philadelphia, Pa., 3 hen, ckl, 1-5 pit, 1 pen; H. H. Bond, Hadonfield, N. J., 4 ckl; Abbleyleix Yds., Penlyn, Pa., 3 pit; Paul G. Springer, Bridgeton, N. J., 4 pen.

BUFF ROCKS—Jas. H. Vincent, Hazelton, Pa., 1 cock, 1-2 hen, 1-4 ckl, 4-5 pit; Joe. H. Hertz, Hanover, Pa., 2 cock, 4 hen, 3 ckl, 1-2 pit; Kerlin Farm, Pottstown, Pa., 3 cock, pit; Wm. J. H. Goetz, Detroit, Mich., 4 cock, 3 hen, 5 ckl; B. U. Livingston, Jr., Penlyn, Pa., 5 hen, 2 ckl.

COLUMBIAN ROCKS—J. M. Jones, Hornerstown, N. J., 1 cock, 3 hen, 2 ckl, 4 pit; Lu-Esta Farm, Vineland, N. J., 2 cock, hen, 3 ckl; Wm. D. Ridgway, Bethayres, Pa., 3 cock, 5 hen, 4-5 ckl, 2-5 pit; F. G. Bean, Collegeville, Pa., 1-4 hen, 1 ckl, 3 pit; Paul G. Springer, 1 pit.

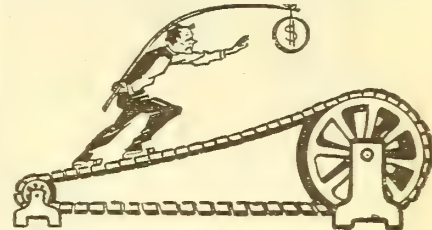

PARTRIDGE ROCKS—Ernest M. Brown, Fawn Grove, Pa., 1 cock, hen, ckl, 3 pit; H. J. Roth, McSherrystown, Pa., 2 cock, hen, ckl, pit; J. C. Myers, Ligonier, Pa., 3 ckl, 1 pit.

SILVER WYANDOTTES—T. K. McDowell, Rising Sun, Md., 1 cock, hen, pit, 1-2 ckl; Salem Poultry Farm, Salem, N. J., 2-3 cock, 2-3-4 hen; R. C. Brown, Cranesville, N. Y., 4 cock; H. M. Puder, Rutledge, Pa., 5 cock, 3 ckl, 2 pit; R. C. Creer, 3 pit.

WHITE WYANDOTTES—John Y. Cleaver, Gilbertsville, Pa., 1 cock; J. Clawell & E. Robbins, No. Glendale, Pa., 2 cock, 5 hen, pen, 3 pit; Allen C. Roberts, Parker Ford, Pa., 3 cock, 1 hen, pen, 5 ckl, 1-2 pit; Wm. D. Ridgway, 4 cock, pen, 2-3-4 hen, 3 ckl,

4-5 pit; Lu-Esta Farm, 5 cock; White Wyandotte Pity. Yds., Westborough, Mass., 1 ckl; Wood Crest Farms, 2 ckl; John J. Thoburn, Trenton, N. J., 4 ckl; Harry Freas, Ft. Washington, Pa., 2 pen; S. Y. Warner, Ardmore, Pa., 3 pen.

PARTRIDGE WYANDOTTES—Minch Bros., 1 cock, ckl, pit, 2 hen; Edgewood Poultry Farm, Lansdowne, Pa., 1 hen.

Life is a dull grind to the man who thinks only of the grist—

There's one Family Farm Paper that brings happiness without neglecting the grist. Nearly 1,000,000 are already enjoying its sunshine—why not you?

169 Washington Square, Philadelphia

MAKE CHICKS GROW BIG and HEALTHY

In Spite of Sudden Weather Changes

you can save your chicks by brooding with the MacKay because it has a bigger coal-burning heater with **both top and bottom drafts**.

The bottom draft is below the fire—where every good draft in any stove you ever used is located—and compels immediate increase of heat automatically when the thermostat is affected by a sudden change to cold weather.

Because of this double regulation—top and bottom drafts—the correct heat is assured all the time and the MacKay keeps the babies alive and growing and makes poultry-raising more profitable. No poisonous oil fumes or gas.

MACKAY Colony Brooder Three Sizes Broods up to 1000

These MacKays have bigger and heavier all-cast-iron heaters, lasting, heavy galvanized iron Deflectors, mechanically perfect and accurate double temperature regulation.

The MacKay Junior is the biggest value ever offered, as it has exactly the same operation and double regulation as the two larger and more expensive models, and is made from the same strong and lasting materials. It is sold at a price that makes any other method of Brooding expensive.

The MacKay is the original self-regulating Brooder of its kind; the first on the market; longest in use and has passed the real test of time. It is the safest and surest Brooder made.

You owe it to yourself to thoroughly investigate the MacKay before you buy your brooding equipment.

Write today for handsome catalog that fully describes and illustrates the MacKay. Please send your dealer's name.

"St. Augustine, Fla., Dec. 12, '15.
Dear Sirs:

I am writing to find out if you are going to have Baby Chicks as last year, as I want to put in an order for the first hatch. Last year I bought over 600 of you and this year I would like at least 1,000. I have some of the finest chickens I ever saw, many prize winners from those I bought of you.

Yours truly,

Ernest Oliveros."

20 Lbs. Raw Oats Make 70 Lbs. of Best Green Egg-Making Feed

WHY allow your hens to loaf when you can make them give you eggs a-plenty right at the time when prices are highest? Feed sprouted grain — crisp green feed that you can make yourself for only 15c a bushel with the "Successful" Grain Sprouter. Make three bushels of tempting egg-making feed from one bushel of oats, wheat or rye — increase the egg yield at least 50% — and at same time save 1/2 feeding cost. Write for catalog and 1916 offer we make on the

"SUCCESSFUL"

SECTIONAL ALL-STEEL GRAIN SPROUTER

Made with double steel walls — metal trays — nothing in it to warp, shrink, swell or mold the food. Fireproof. Lasts a lifetime. Large glass doors. Made in sections so you can add more sections as your needs grow. There's a size for your needs whether you keep 50 or 600 hens. Thousands of poultry raisers say they would not be without this wonderful food maker. The newest, most reliable construction ever made in a grain sprouter. Not only turns idle hens into industrious layers but supplies feed for growing chicks — protects health — prevents chick loss. Booklet "How to Raise 48 Out of 50 Chicks" 10 cents.

ZENOLEUM

Kills Lice and Mites

Disinfects the Hen House, Brooder and Incubator. Cures Roup, Scaly Leg, Canker, Cholera. Prevents White Diarrhoea

Safety First: Zenoleum has been on the market for 17 years. It is a powerful and safe disinfectant. Government vital statistics show that many people have been burned or killed by carbolic acid—more than by any other drug. Kerosene is not a disinfectant, and makes a fire danger. ZENOLEUM is safe to use, day or night, everywhere.

Endorsed by 50 Experiment Stations

Your State Agricultural College is using Zenoleum, and so are forty-nine others.

Disinfect the Incubator

Prof. W. R. Graham, Poultry Expert for the Ontario Agricultural College at Guelph, reports:

"We have succeeded in hatching 7 to 8% more chicks that grow and live well by washing the machine with a 10 per cent solution of Zenoleum before putting in the eggs. It proves of greatest value in maintaining the vitality of the chicks. I would use this substance in every machine set."

Pittsfield Poultry Farms Dip 1,000,000 Eggs

"Each year we use more Zenoleum in incubation. We dip our eggs and wash the incubators. After several years of thorough trial we are convinced it is very much worth while. We now use 185,000 eggs at a setting and Zenoleum is used on every hatch, just as it used to be when we set only 6,000 at a time."

Moderate in Cost—Continue to Use It

"It gives me great pleasure to say that we have used more Zenoleum the past year than in any previous year, not only using it in our incubators, as we have done for a long time, but as a general disinfectant in all our houses, and have used it very freely when doing our summer and fall house cleaning. I know of no better disinfectant and I can heartily recommend it to all poultrymen as being efficacious and very moderate in cost considering the excellent results, and the mere fact that I tried it out thoroughly before using it in a large way and continue to use it, is the strongest endorsement I can possibly give."

MAURICE F. DELANO.

Most of your poultry losses can be avoided by the use of ZENOLEUM. Our wide-open guarantee must convince you that ZENOLEUM is what we say for it. It will help you raise better stock with less worry. Give it a trial at our risk.

OUR GUARANTEE

If Zenoleum is not all YOU think it ought to be, you can have your money back.

PRICES: Postpaid; 8-oz. 25c; quart 50c; gallon \$1.50.

If you write promptly, we can supply you with a limited number of his progeny for immediate delivery. Now booking egg orders. Satisfaction or money back is the way we do business.

ROCK LEDGE FARM
SOUTHBOROUGH - MASS.

When Better Birds Are Bred - We Will Breed Them

THE CLEVELAND SHOW.

THIS year's Cleveland Show, conducted by the Cleveland Poultry Breeders' Association, was one of the most successful ever held in Uncle Sam's sixth city. The attendance was good, there was a large entry, and the work of the different judges was such that there was no dissatisfaction on the part of exhibitors so far as we could learn. The association feels that it has outgrown the site of its recent exhibition (Grays' Armory), and it is now negotiating for the engagement of a larger building for its next year's show.

Some people thought that the dates chosen for the show just held, January

Dr. R. H. Lindhorst, Cleveland, Ohio, Secretary The Cleveland Poultry Breeders' Association.

3-8, would have a tendency to cause a falling off in the entry on account of the conflict with Madison Square Garden, but this was not the case, as the exhibits in nearly all the classes were larger and finer than ever before.

The officers of this association are as follows: President and Superintendent, J. O. Somers; Secretary, Dr. R. H. Lindhorst; Treasurer, J. B. Holmden. These gentlemen proved themselves tireless workers and much praise is due them for their efforts; in fact, the whole organization, officers and members, are hustlers, and it is no wonder that they are making such a success with the Cleveland show. Everything was run in an up-to-date manner and every courtesy was shown the exhibitors and visiting fanciers.

The judges were: D. D. Whitaker, J. W. Simmons, L. A. Stream, W. G. Minich, J. E. Gault, A. H. Emch and J. H. Busch. There was quite a change this year in the assignment of the varieties to the different judges which seemed to work out well in many ways.

The cooping was furnished by the Genesee Cooping Co., Rochester, N. Y., and this end of the show was handled in first-class style under the able direction of Geo. Webb.

The show had a number of visitors well known in the poultry world. We saw in the aisles S. T. Campbell, Secretary of the American Poultry Association; F. C. Stier, President Ohio

TOM Barron's Winners

All Egg Contests Prove Them

World's Greatest Layers

Are Still at MORRIS FARM
R. 4 - Bridgeport, Conn.

I have the Most Profitable Flock of Poultry in America, and you cannot afford to be without my blood.

Remember, you take my word for nothing. I state only official records made at National Laying Contests.

In Wyandottes—

\$8.69 worth of Eggs by BARON-ESS V, the 282-egg hen, at North American Contest, 1913-14. Four others laid 274, 271, 258 and 252 eggs. The five laid 1337 eggs, an average of 267, or \$8.21 per hen.

I have a flock of 27 Hens that gave net profit per hen of \$4.67. These are the three Contest Pens I bought of Barron, and which he had at Pennsylvania, Connecticut and Missouri. All my Wyandottes are bred from these.

In Leghorns—

I am breeding the Highest Pedigree Cockerels in the World, out of the 288-Hen, winner at Newport, Eng. This affords new Winning blood for the Barron breeder. Others, 284, 256, 255, etc.

In Buff Rocks—

280, 265, 263, 240, etc. I guarantee all contest birds.

All Breeders tested by Storr's College. Free of white diarrhoea.

MORRIS FARM R. 4 Bridgeport, Conn.

IT SEEMS TO FALL TO

DUSTON

To Bring Out a

White WYANDOTTE

that really marks an epoch in the Wyandotte world.

"Framingham Chief"

stood out as a wonder for shape and quality. There probably was never shown his equal as a cockerel. That bird marked an epoch. At Madison Square Garden, this season another "Duston" cockerel, "Whirlwind 1st," won. This bird marked another epoch. The judge, an old Wyandotte breeder, attending Garden shows for many years, says: "This cockerel was the best he had ever seen in competition in the Garden." That is going some. I have won 1st cockerel between these males, but such birds are just winners, not models of the classic in Wyandottes. In addition to 1st cockerel, I won 1st pen, 4th and 5th cocks, 2nd and 3rd hens, 1st and 4th pullets, 1st collection (36 points to my nearest competitor's 19). Champion White Wyandotte male, best shaped male, best headed male. Mr. Sewell said after carefully going over the classes, if he wanted a model for a Wyandotte head he would choose 1st cockerel. Best shaped female, best headed female, and seven other specials, winning over Palace and Philadelphia winners. This on top of the winners I have sold proves the claims I have made as to the unsurpassed quality of my stock. I can furnish you breeders and show birds. Eggs from exhibition and practical matings. Send for catalog to the breeder who has made possible the world's best flocks.

ARTHUR G. DUSTON, Box 1020, Framingham, Mass.

Comeback Collapsible Brood

Coop slip together, take apart with your hands, no hammer, nails, bolts or screws, solid, sanitary, louse, rat and rain-proof. Repairing the old wood coop to save money is like stopping the clock to save time. Perfect protection while they are little will result in a larger per cent of mature birds. Ask for circular.

McDaniel & Cessna, Kansas, Ohio

THE EDWARDS BROODER

\$7.50 for 100 Chick Size
Rat and fire proof. Cost of oil only 5c per week. Chicks raised on a bed of warm sand.

State Poultry Breeders' Association; Prof. M. C. Kilpatrick, Ohio State University; H. C. Shepherd, Eugene Sites, T. H. Kline, Pub. Manager of the Forest City Fair, Len Rawnsley, and numerous others.

Barred Rocks—One of the largest and finest classes of this variety shown in Cleveland in several years. There were 60 single entries and 9 pens. Fine Plymouth Rock type and even, snappy barring were conspicuous among the winners.

Buff Rocks—Strong in numbers and quality. Awards somewhat split up among the different exhibitors.

Partridge Plymouth Rocks—A big class, full of quality.

White Rocks—A heavy entry, with

First S. C. Ancona cockerel at Cleveland, Ohio, January, 1916. J. O. Somers, Bedford, Ohio.

some beauties among the winners.

White Wyandottes—A very fine class, consisting of 53 singles and 5 pens. The first and second prize winners were all extra good.

Partridge Wyandottes—We don't believe there was ever a better quality show of this variety anywhere. They were out in force, too—61 single entries and 8 pens.

Buff Wyandottes—Not as large a class of Buffs as are usually at Cleveland, but some excellent birds were among the winners. The same can be said of Black, Golden, Silver and Columbian Wyandottes.

S. C. Reds—73 singles and 4 pens were lined up for the judge's inspection, and in Rose Comb Reds, 62 singles and 11 pens were on deck. We won't comment on any particular birds, as there were so many good ones both among the winners and those not quite good enough to get a place. Judge Simmons pronounced the showing of Reds at Cleveland one of the finest he had ever seen.

Rhode Island Whites—Were represented by a small but select class.

Light Brahmas—Light in numbers, but winners of good quality.

Black Langshans—Not a very large class. The winners of the several first prizes were real classy.

S. C. Brown Leghorns—Fair in numbers and excellent in quality, especially first cock, first and second hen and first cockerel.

S. C. White Leghorns—The banner

Queen - Built to Hatch Without Trouble

The Queen is built for results—under any and all conditions. We make the assertion that it will produce, year in and year out, **better hatches of stronger chicks**, with less attention than any other machine on the market—at any price.

Most any machine will hatch under ideal conditions, but if you are in the poultry business, you can't always have ideal conditions, and you must be protected against the unexpected, such as a sudden drop in temperature. The Queen Regulator will take care of a sudden change in temperature of seventy degrees.

Best East or West

John Bowen, of the Colorado Poultry Fanciers Association, wrote Sept. 24, 1915: "Last season the writer installed a Queen as an experiment, and found that it hatched 18 per cent better than Eastern made machines and 11 per cent better than any machine in the West. All the machines were run under exactly same conditions."

Richard Wayte, Gary, Ind., writes: "I have been in the poultry business and used both hot water and hot air machines. I have made a very thorough comparison of 12 different machines, and the Queen is the most thoroughly constructed of all."

Not a Cheap Machine

The Queen is not a cheap incubator, compared with many of the cheaply constructed machines on the market, but it is cheap in the long run. It will be turning out high-percentage hatches years after the cheap machines have been junked. It will be a pleasure to send you our new Catalog. Mailed free on request.

QUEEN INCUBATOR CO., 105 Bryan Ave., Lincoln, Neb.

Brown's Fence Bargain Book READY! WRITE NOW!

BIGGEST, BEST FENCE BOOK EVER PRINTED
Hold your fence order till you get my new book and new low prices. LAYERS OR SHOW BIRDS

We can supply you birds that cannot be excelled for type, color, or as egg producers. Our birds have free range on a 300 acre orchard, meaning sturdy, vigorous fowls; 265 trap-nests in operation, so we know what these birds will do.

White Wyandottes and S. C. White Leghorns.

STRAINS ESTABLISHED 1906

LAKEWOOD FARM

HOLLAND, MICH.

class of the show, with 122 single entries and 17 pens. There was quality to burn in this class. The writer took particular liking to first cockerel and first and second pullets.

Buff Leghorns—Fair sized class of good quality Black Leghorns, the best class ever seen at Cleveland, and quality of winners was great. There were several excellent birds unplaced that were bought from well known farms at long prices to win at this show, so you can imagine how keen was the competition and how excellent were the winners.

R. C. Brown, R. C. White and Silver Leghorns—Light in numbers, but quality good, especially in Silvers.

R. C. Black Minorcas—The International R. C. Black Minorca Club held its annual meet at this show and there was brought together one of the

The first prize White Wyandotte cockerel at Cleveland, Ohio, January, 1916. C. W. Sixt, West Park, Ohio.

largest and finest classes of this variety ever shown. There were surely some stars among the winners.

S. C. Black Minorcas—Another strong class in both numbers and quality.

Anconas—Not as large a class as is usually seen at Cleveland, but fine in quality, especially first hen and first cockerel in the single combs.

Orpingtons—This year the management decided to place W. G. Minich as judge of this class and the wisdom of this course proved good, as the finest, and probably the largest, entry of Orpingtons of the three more popular colors ever in Cleveland was shown. To say that the exhibitors were justified in their confidence thereby shown in "Bill" Minich's ability to handle the class is putting it mildly, as much favorable comment of his work was expressed. Among the Blacks were some stars, with competition keen. Buffs were a wonderful class, strong in numbers and with quality galore. The first prize cockerel in this class won the special for the best cockerel of any variety in the show. He was certainly the admiration of all eyes. White Orpingtons; a large class, the winners of the highest quality and shown in beautiful condition.

Red Sussex and Speckled Sussex—

Strong classes and keen competition, as might be expected when a lot of the winners at the Panama-Pacific, Chicago and other big shows get together.

Silver and Golden Campines—One of the largest and finest classes we have yet seen, some well known winners at other big shows being in competition.

White Crested Black Polish — A small class, but the first hen was indeed a beauty.

Houdans, Faverolles, Cornish — Small classes, but winners good in quality.

One fine pen of Silkies was shown. We were glad to see a better and larger showing of Bantams than is usually the case at Cleveland.

Some good Bronze turkeys were shown, also one very nice pair of Narragansetts.

Pekin ducks were very good, also there were some good Muscovy ducks and a few Toulouse and White China geese.

The awards follow:

R. C. ANCONAS—Geo. Young, Williams Ave., West Park, O., 1 cock, 2-4 hen, 1-2 chl, 2 plt, 1 yng pen; E. P. Bohrer, 122 River St., Berea, O., 2 cock, 3 hen, 4 chl; J. O. Somers, Bedford, O., 3 cock, 1-5 hen, 3 chl, 1 plt, 2 pen.

We Are Shipping 20,000 Chicks this Month

45,000 in March

50,000 in April

60,000 in May

and All S.C.W. Leghorns

All one strain and breeding. How many of these do you want? Write us for open dates of shipment. Don't forget that our Leghorns are all one strain, and have given such satisfaction in the past that we believe today we are the largest shippers of this breed in this section of the country.

We are not simply poultry keepers, but are real genuine breeders of a recognized strain of utility Leghorns. We sell chicks that are easily raised, and will develop into big money makers for you the coming season. We don't simply run a hatchery, but control the breeding of our strain of birds and every year sees a higher quality of stock leaving our farm. Our Leghorns have got size, good looks, and grand laying qualities of good sized eggs.

Our prices are about the same as you pay for ordinary, haphazard bred stock. Our chicks cost from 13c to 17c, according to the amount you purchase, whether 25 or 5,000 chicks.

We issue one of the largest illustrated Leghorn catalogs of any breeder in the country, which is chock full of information of all kinds, either for the beginner or the experienced poultryman. Our big business has been built up from making our customers successful. You should at least try out some of our Leghorn chicks the coming season. They are proving a revelation to a great many breeders in different parts of the country.

THE EVERLAY FARM

(The Lord Farms) Box 240-M, Methuen, Mass.

Send for this Book

IT IS FREE

Here is a book that tells the difference between a good incubator and the other kind. It tells why some incubators succeed and others fail. It tells in an honest, straightforward manner about the fakes and frauds on the market and contains a lot of additional information about incubators that will interest every poultry breeder.

If you own a hundred incubators this book will help you a lot and if you are just contemplating the purchase of your first machine it will be invaluable to you.

Just send a post card to the Buckeye Incubator Co., 501 Euclid Ave., Springfield, Ohio, and they will send you the book without charge. It costs you nothing and may be worth many dollars to you. Send for it today.

Chicks that Live

are hatched cheapest in a Paradise Hatchery, which is controlled by the only perfect regulator ever created—you can't go wrong—world's greatest hatching method. Don't set a single hen or an egg in any way until you get my literature—start 1916 hatching season right.

WILL REVOLUTIONIZE HATCHING

was the verdict of the Club Members and the

visitors at the Owensboro (Ky.) Poultry Show, writes Sec. Carpenter. Another: "We have used your Paradise Hatchery several seasons with grand results." Another: "We have had excellent hatches of strong, vigorous chicks and it is indeed a pleasure to hatch chicks the Paradise Way." Names given; also, more proof. Success is sure if you adopt the Paradise—absolutely no guess work. \$5,000 given away free in 1916 big introductory offers. Nothing like it ever before attempted by a reliable party. Write at once for free literature—do it now. Agents wanted everywhere. Remember: The Pleasure and Profit Way of chicken hatching is via the Paradise Way—"You'll Like It."

ELMER S. WEST, Inventor and Mgr.
Box 97 Ewing, Ky., U. S. A.

Middlemarch Champion Strain of

ORPINGTONS

BUFF and BLACK

Win at The National Buff Orpington Club Show, Chicago Coliseum, in strongest class of Orpingtons ever gathered in Chicago, a 2nd, 3rd, 5th and 6th. Also in past two seasons: Great Minnesota State Fair, 1-2-3-4 cockerels; La Crosse, Wis., all 5 firsts, 1 cock, 1 cockerel, 1 hen, 1 pullet, 1 pen, best display, best 10 birds; Birmingham, Ala., 1-2-3-4; Minneapolis (two entered), 1-2.

For customers in Rutland, Vermont; International Live Stock Show, Sioux City, Iowa; Gray Harbors Show, Washington; Sioux City Winter Show; Huron, S. D.; St. Cloud, Minn., and many others. It takes merit to win. Stock at all seasons.

Half price on all Eggs ordered before March 1, 1916. Ten live chicks guaranteed. Eggs delivered when you want them.

Finest matings in Blacks in the West. Finest matings I ever had in Buffs. They are the result of years of careful breeding and selection. Most liberal guarantee on eggs. Place your orders early.

\$10.00, \$5.00, \$2.50 for 15 eggs
Before March 1, \$5.00, \$2.50, \$1.50 for 15 eggs

JESSIE F. GORDON, Box 535, Spring Valley, Minn.
Sec.-Treas. of Minn. Branch of A. P. A.

CHAMPION

Rhode Island Reds

Win 1st hen and 4th cockerel at Greater Chicago Show, January, 1916, only three birds entered. Stock and eggs for sale. Eggs from 1st pen, \$5.00 per setting. This pen includes 1st hen at Chicago.

FRANK JOHNSON, 220 W. 110th St., Chicago

SCHABELL'S

Wh. and Buff Orpingtons

Win 1st prize pen at Chicago, January, 1916; 1st, 2nd and best pullet at Melrose Park; 1st young pen and 1st, 2nd, 3rd, 4th and 5th in singles at South Shore Show. Trapnesting all birds. Highest egg record 142 eggs per year. Eggs and stock. Mating list free.

JOHN SCHABELL, 3331 Cuyler Ave., Chicago, Ill.

White Wyandottes

Eggs from high class matings that will produce winners. \$2.00 per 15. Satisfaction guaranteed.

FRED A. RUE, Crown Point, Ind.

S. C. WH. ORPINGTONS, a Specialty

At Great Pittsburgh show—16 birds entered, everyone placed and none lower than 4th. Also cup for best display. Fancy birds, but not fancy prices. Book your egg order now.

OTTO J. EBERLE 1535 Grandview Ave. PITTSBURGH, PA.

Get the HOUDANS and Golden Sebright

BEST BANTAMS. Stock and eggs very reasonable.

Ralph W. Cagwin Williamstown, N. Y.
One of America's Oldest Fanciers.

Barred Rocks—At Boston, 1916, we entered 2 birds and won 1st PULLET, also 4th Pullet bred cockerel. This wonderful win, and there were 10 exhibitors. Stock and eggs, just like these winners.

Bear Brook Poultry Farm Wakefield, Mass.

"PREMIER" Partridge Wyandottes

Win majority of the prizes wherever shown. Breeders of "Premier" Partridge Wyandottes do not find it necessary to advertise ancient winnings, as they win the majority of the prizes every year. The following records tell the story plainer than pages of "talk". Sheffield Farm birds won at

Boston, January, 1916—4 firsts, 5 seconds, 4 thirds, 1 fourth.

Cleveland, O. (Nat'l P. W. Club Show), January, 1916—4 firsts, 3 seconds, 4 thirds, 3 fourths, 2 fifths.

Madison Square Garden, N. Y., January, 1916—3 firsts, 2 seconds, 2 thirds, 1 fourth.

Palace Show, N. Y., December, 1915—5 firsts, 4 seconds, 1 third, 2 fourths.

At the Allentown, Hagerstown, Syracuse and Indianapolis Shows, held during the Fall of 1915, we won 21 firsts out of a possible 23.

While the above list of unequalled winnings will give you an idea of the quality of the birds bred and owned by Sheffield Farm, their customers in a great many cases did equally as well, winning 1 third, 2 fourths, 1 fifth at **Madison Square Garden**; 2 thirds, 2 fourths, 1 fifth at the **Palace Show, N. Y.**; 1 first, 2 seconds, 2 thirds at **Cleveland**, and a goodly share at all the prominent shows of the year.

At the **San Francisco Exposition** in 1915 the 1st hen and 2d cock were "Premier" strain Partridge Wyandottes.

Unexcelled for utility and beauty, they are undoubtedly the "Twentieth Century Fowl." We can satisfactorily supply you with Exhibition and Breeding stock, young or old, at reasonable prices.

Eggs \$5.00 per setting of 15.

Partridge Wyandotte book free.

A Real Necessity About Poultry Yards and Buildings.
INEXPENSIVE. EFFICIENT. UNIFORM.
EASY TO USE.

KRESO DIP No. 1

will put an end to LICE and MITES;
 stop loss from contagious disease;
 CLEANSE, PURIFY AND DEODORIZE.

**One Gallon
 Makes 100 Gallons**

of disinfectant solution ready for immediate use.

Spray or sprinkle it about the poultry buildings and runs. Put a little in the drinking water. Dip the birds if they are badly infested with lice.

This is the best possible means of insuring the health and thrift of your flock.

Make all live stock quarters sanitary by using it to prevent contagious diseases.

Scientific tests on live hogs prove that a 2½% dilution of KRESO DIP NO. 1 will kill the most virulent HOG CHOLERA VIRUS in 5 minutes by contact.

Write for free booklets telling how to prevent common animal diseases.

Buy Kreso Dip No. 1 in original packages from your druggist.

FREE! BOOK OF 100 HARRIS HOMES, BARN, ETC.

This book shows our House, Barn, Garage and Apartment Designs in beautiful halftone engravings. Also shows floor plans, material lists, complete information, and details of the HARRIS WAY. Mailed free anywhere. Send coupon on opposite page.

Blue Prints and Specifications

We will furnish complete Building Blue Prints, Specifications and Material List to build any design on this page for \$1.00.

\$229 Buys a Whole Carload 15,000 Feet of Lumber

This year we are offering a carload of lumber at the lowest price we have ever made—right in the face of a swiftly advancing lumber market. If you are figuring on doing any building at all during 1916, do not hesitate to send us your order right away. Prices are going sky high, and will probably stay there.

At the above price we will furnish 15,000 feet of brand new, good lumber, guaranteed grades. Our offer includes timbers, dimension boards, siding, flooring, ceiling and patent lath. Shipment DIRECT TO YOU from our new mammoth mill and manufacturing plant. We are able to make this tremendous offer only by eliminating all in-between profits, eliminating re-loading and re-shipping charges, sending you a full carload direct of the kind of lumber you want, as in our \$229.00 Lumber Bargain Offer. YOU get the benefit of all the savings in freight and handling charges.

Send coupon in the right hand corner of opposite page today and ask for our \$229.00 Offer.

BUILD YOUR HOME THE HARRIS WAY SENSIBLY CUT-TO-FIT

The most economical and up-to-date way to build your new home is THE HARRIS WAY—Sensibly Cut-to-Fit—the best of all cut-to-fit methods. We send you all materials Sensibly cut-to-fit, and furnish you our Blue Print Plans and Specifications with Material List, so that you can build your home at a saving of one-third to one-half over building the old-fashioned way. Such well-known poultrymen as C. V. Keeler, John Memkin and others have built their homes the HARRIS WAY, and realized great savings together with freedom from trouble, care and worry.

First, we give you the materials SENSIBLY CUT-TO-FIT the HARRIS WAY, at prices that absolutely save you hundreds of dollars. Then by our wonderfully efficient building plan, which cost us thousands of dollars to perfect, you save tremendous amounts in building expense and freedom from waste and other losses. The HARRIS WAY is the result of twenty-four years of expert building experience and study.

Send the coupon for your copy of our free Book of Plans.

Saved \$510.00

READ THIS LETTER

Greensburg, Pa.

Chicago House Wrecking Co.

As to quantity and quality of material furnished me for my home (No. 131), I am highly pleased.

I have made a saving of \$510 and have had sufficient material for the smallest detail. I could not have duplicated this design for twice the amount paid your firm. Also might state further that Plans and working sheets for this design worked out to the letter.

I am always your friend for your fair and courteous treatment.

Yours respectfully,

H. A. HENRY, P. O. Box 516.

This Banner Bone Mill is a regular \$4.00 value. It is made extra strong, and will grind bones, oyster shells, small gravel, crockery, etc. Is equipped with a crusher and burrs, which can be adjusted to grind fine or coarse. Order No. 8-AF-8021. Bone Mill, \$1.97.

For other bargains in poultry supplies, get our Poultry Supply Book, by sending coupon in corner.

Famous Little Giants; Incubator and Brooder

They are small unit types, and consequently bring a large percentage of success. Made of metal except for the heavy glass top. Incubator is equipped with double-wafer thermostat warm air heating system. Brooder is also all metal except the flannel cover. Equipped with hot water heating system. This is an ideal combination for use with prize eggs or on a small farm for regular work. Special to poultrymen this year at the bargain price of \$6.95 for both. Both machines are 60-egg capacity. You can order them direct from this ad by Order No. 8-AF-298.

For the Little Giant Incubator separately, \$4.80. Order No. 8-AF-299.

For the Little Giant Brooder separately, \$2.50. Order No. 8-AF-297.

TYPEWRITER SENSATION

GREATEST TYPEWRITER BARGAIN EVER OFFERED

Only \$2.00 a month until the bargain price of \$29.60 is paid and the machine is yours. This startling offer has astounded the typewriter world. Absolutely the greatest typewriter bargain ever offered. For a short time only I offer a limited number of these standard,

VISIBLE WRITING MODEL No. 3

typewriters at this exceptional price. Perfect machines, not damaged or shop worn. Complete outfit, cover, tools, instructions, etc. Machine of standard size but light weight and portable, keyboard of standard arrangement writing the full 84 characters, two color ribbon, tabulator, back spacer, writes on ruled lines; in fact every late style feature and modern operating convenience, at less than a third of the regular price, and each letter visible as printed and all previous writing completely visible at all times.

FREE TRIAL You Take NO RISK

My brand new Model No. 3 offer for but \$29.60—and only \$2 per month.

I won't let you buy this typewriter before you see it. I want you to be absolutely convinced that this is the greatest typewriter bargain ever offered. If you have the slightest use for a typewriter you should accept this amazing offer. You cannot equal this wonderful value anywhere. When the typewriter arrives deposit with the express agent \$5.60 and take the machine for five days' trial. If you are convinced that it is the best typewriter you ever saw, keep it and send me \$2.00 a month until my bargain price is paid. If you don't want it, return to the express agent, receive your \$5.60 and he returns the machine to me. I will pay the return express charges. This machine is guaranteed just as if you paid \$100.00 for it.

ONLY 100 TYPEWRITERS At This Price

There is no time to lose. Fill in the coupon and mail it today—sure. The typewriter will be shipped promptly. There is no red tape—no solicitors—no collectors—no chattel mortgage. It is simply understood that I retain title to the machine until the full \$29.60 is paid. You cannot lose. It is the greatest typewriter opportunity you will ever have.

TEAR OUT—MAIL TODAY

H. A. SMITH, 902—231 N. Fifth Ave., Chicago, Ill.
Ship me your Model No. 3, F.O.B. Chicago, as described in this advertisement. I will pay you the \$24.00 balance of the SPECIAL \$29.60 purchase price at the rate of \$2.00 a month. The title to remain in you until fully paid for. It is understood that I have five days in which to examine and try the typewriter. If I choose not to keep it I will carefully repack it and return it to the express agent. It is understood that you give the standard guarantee for one year.

Neubert Incubator Factory, Box 30 Mankato, Minn.

CLASSIFIED ADS.

UNDER this heading ads will be inserted for seven cents per word each month for less than three months, and **five cents per word each insertion for three months or longer.** Changes in copy allowed every three months. Numbers and initials count as words. All ads will be inserted under **classified headings.** No ads accepted at less than an average of sixty cents per insertion. Terms, cash with each ad. Count the words carefully to avoid delay in publishing. Write your copy plainly, as upon this the correctness of your ad largely depends. When placing your ads remember that advertisers using Classified Ads get better returns from **AMERICAN POULTRY JOURNAL** than from any other poultry journal—none excepted. On writing any of these advertisers mention **AMERICAN POULTRY JOURNAL.** All copy for Classified Ads must reach us by the 17th of month preceding date of issue.

CAMPINES.

GARRELL'S PEERLESS Campines have proven their merit by winning many first prizes at St. Louis, Kansas City and Springfield. Highest quality in stock and eggs at lowest prices. Booklet free. Julius Garrell, Webster Groves, Missouri. 2-15-1yr

CAMPINES, SILVER, GOLDEN. Winners at Iowa, Kansas and Missouri's best shows. Catalog. W. Jenkins, Mystic, Iowa. 2-4

GOLDEN CAMPINES, Kennedy-Jacobus strains. "Living Egg Machines." Ship on approval. Rev. E. H. Keator, Franklin Park, N. J. 12-2

TEN GOLDEN CAMPINE pullets and two cockerels at a bargain. Rev. E. H. Keator, Franklin Park, N. J. 12-2

SILVER CAMPINES. Grand birds reasonably priced. Rev. W. Berberich, Grotton, New York. 11-15-tf

SILVER CAMPINE COCKERELS. I have for immediate sale about 50 cockerels hatched from eggs laid by trap-nested females with very high egg laying records, and sired by some one of my males that won his blue ribbon at the Coliseum, Chicago. I will sell these cockerels at \$3.50 to \$5 each. There are no better Campine Cockerels for breeding purposes in the country. They have type, vigor and are line-bred to produce egg-layers. In fact, for producing an egg-laying strain, they are just as valuable as males that cost a dozen times as much. Orders will be filled as received. Consequently, if you are interested, an early reply is advisable. In writing please state that you wish a utility cockerel, and mention the American Poultry Journal. Frank E. Hering, South Bend, Indiana. 11-15-tf

GOLDEN CAMPINES EXCLUSIVELY. Winners in Chicago Coliseum Show, 1915. Fine layers. Most beautiful. Combine beauty and eggs in our Golden. C. Sparks (b), Rt. 1, Berrien Springs, Mich. 1-3

GOLDEN CAMPINES—Last year I imported four males and five females—the pick of Rev. Jones' breeding for year. Chicago Coliseum, last December, won first and second cockerel, color special on male, shape special on female. This is the class of my stock. If you want to raise winning Golden, write for my egg prices. Five pens. Dr. E. P. Hatheway, Nertney Bldg, Ottawa, Ill. 2-4

BECKER'S SILVER CAMPINES—Winners at Wheeling, W. Va., Bellaire, Zanesville, Akron, Canton, Ohio. Will H. Becker, 316 N. 7th St., Martins Ferry, Ohio. 2

BEST IN MICHIGAN—Silver Campines. Stock for sale. Eggs, \$1.50 per 15. L. E. Legg, Coldwater, Mich. 2-4

GOLDEN CAMPINES—Brocton Fair prize winners. Eggs, \$3 per 15. C. L. Hayward, West Bridgewater, Mass. 2-3

SILVER AND GOLDEN CAMPINES—Stock for sale. Chas. Abel, Johnstown, N. Y. 2-7

BARGAINS — SILVER CAMPINES, two cockerels, fourteen hens, all \$15; one cockerel, seven hens, \$8. H. H. Bergman, Route 9, Paola, Kan. 2

GOLDEN AND SILVER CAMPINES—The three best Golden Campine males at the Panama-Pacific International Exposition. First cockerel, first pen cockerel and first cock. All were decidedly superior in a large class of especially fine birds. Harry Truesdell, Eugene, Ore. 2-4

SILVER CAMPINE COCKERELS from great layers. Write for prices. Cook Van Tassle, Franklin, N. Y. 2

SILVER CAMPINES—Jones' and Jacobus' strains; 4 firsts, 3 seconds, 4 thirds at Indianapolis in 2 years. Best mating eggs 15 for \$2; 50 for \$6; 100 for \$10. Extra good utility, 15 for \$1.50; 50 for \$4.50, 100 for \$8. James R. Pearcy, Martinsville, Ind. 2-4

CREDE'S SUPERIOR SILVER Campines. Cocks, cockerels, hens and pullets for sale. Prices very reasonable. Write me your wants. Wm. Crede, Elgin, Ill. 2

BARGAINS EXTRAORDINARY! S. C. White Leghorn cockerels. I have for immediate sale about 40 cockerels hatched from eggs laid by trap-nested females with very high egg-laying records and sired by my blue ribbon males at the Coliseum, Chicago, the Illinois State Fair, Indianapolis and so on. I will sell these cockerels for \$2.50 apiece. There are no better utility S. C. White Leghorn cockerels in the country. They have vigor, pure white plumage, and are line-bred from high egg-laying hens. For producing an egg-laying strain, they are just as valuable as males that cost a dozen times as much. Orders will be filled as received. Consequently, if you are interested, an early reply is advisable. In writing please state that you wish utility cockerels and mention the American Poultry Journal. Frank E. Hering, South Bend, Ind. 11-15-16

CORNING EGG FARM

BREEDERS OF THE STRAIN OF S. C. WHITE LEGHORNS

"Which Cannot Be Surpassed"

Breeding Cockerels, Pullets and Breeding Hens, Day Old Chicks, Six Weeks Old Chicks, Eggs for Hatching, Custom Hatching

After 10 years of Successful Breeding for Egg Production, Stamina, and Size, the quality of the Corning Egg Farm Leghorn today is such that you cannot afford to even consider the purchasing of Cockerels, Pullets, Hens, Chicks or Eggs, until you have first written to us.

The aim of the Corning Egg Farm is to assist you to success. Write us freely and fully. We gladly give your letter our personal attention, with the benefit of our years of experience. Visit the Farm, we'll be glad to see you. Write for particulars of our Unique System of Instruction in Egg Farming, compiled to satisfy a demand—not to create one. All phases of the subject taught by men who know and have demonstrated in practice the success of every principle advocated and word of instruction given. Reference Book and Lesson Sheets become your personal property to retain for future use. Cost is less than you may lose by one little mistake in incubating, brooding or feeding and handling your birds. Marks a distinct advantage in Poultry Education and a plain path to success.

For Corning Celebrated Chick Food, Dry Mash and Immunity Mixture, write us for the name of our nearest distributor.

Corning Egg Farm, Inc.

MOUNTVILLE, VIRGINIA

Ironclad

TRADE MARK

Wins in the Two BIGGEST HATCHING Contests Ever Held

Why take chances with untried machines when for only \$10 we guarantee to deliver safely, all freight charges paid (East of the Rockies) BOTH of these big prize winning machines fully equipped, set up ready for use? Why not own an Ironclad—the Incubator that has for two years in succession won in the GREATEST HATCHING CONTESTS EVER HELD? In the last contests conducted by the Missouri Valley Farmer and Nebraska Farm Journal, 2,000 Machines were entered, including practically every make, style and price. With 140 Egg Ironclad—the same machine we offer with Brooder, freight paid, for only \$10, Mrs. C. F. Merrick, Lockney, Texas, hatched 148 chicks from 148 eggs in last contest.

We Give 30 Days Trial —Ten Years Guarantee

You have nothing to risk. We will send machines—let you use them 30 days—urge you to compare them in quality of material, hatching ability, workmanship and price—and if you don't find them satisfactory, send them back—we'll pay the freight charges and return your money. You are absolutely safe. We have to do as we advertise. If we didn't the publishers of this paper would not carry our advertising.

It tells how Ironclads are made and why they win in the Big Hatching Contests.

140 EGG INCUBATOR CHICK BROODER

When an incubator is constructed of material of this kind it gives you the strongest and most durable incubator that can be made—a machine that will not warp or shrink, or open up at the seams, as every joint is lapped over with our galvanized iron covering—giving you a machine that will last a life time. Don't class this big, all-metal-covered dependable hatcher with cheaply constructed machines. Ironclads are not covered with tin or other thin metal and painted, like some do to cover up poor quality of material. Ironclads are shipped in their natural color—you can see exactly what you are getting. Don't buy any incubator until you know what it is made of. Note these Ironclad Specifications: Genuine California Redwood, triple walls, asbestos lining, galvanized iron covering. Galvanized iron legs, large egg tray, extra deep chick nursery—hot water top heat, copper tanks and boilers, self regulator, Tycos Thermometer, glass in door, complete book of directions, and many other special features fully explained in free catalog. Write for it today or order direct from this advertisement and save time.

Read the announcement of "A Revolution in Egg Production" on page 208. A book on an entirely new subject.

BRADLEY BROS., LEE, MASS.

Barred P. Rocks

We Bred and Raised Hold Their Place as
FIRST WINNERS

OUR RECORD:

At Madison Square Garden: 4 Firsts, 4 Seconds, 3 Third Prizes, besides other awards have been won by us at a single Madison Square Garden Show. Three times have Males of our breeding won 4 of the Five prizes offered in the class including firsts.

No other exhibitor has ever won THREE FIRST PRIZES at a Madison Square Garden Show where we competed.

The highest cash price ever actually paid for a B. P. Rock so far as has come to our knowledge was given for a male we bred and raised.

29 of our "Lee Belle" Females have been First Winners at Madison Square Garden Shows alone, and 60 Winning Males at Madison Square Garden Shows have been bred by us.

Many birds have been sent by to us customers in England, Russia, Japan, South Africa and other Foreign Countries. They arrive safely and give good satisfaction.

50 Selected Breeding and Show Cock Birds and 1000 Fancy Specimens, Males and Females, For Sale. Ringy, blue-tinged, sharp barred birds from our best pens. We never had a finer lot of birds for every demand. Price list free. EGGS FOR HATCHING from Best Lot of Breeders we ever owned, \$10 per 12; \$20 per 26; \$25 per 33; \$67 per 100. These will produce winners. We do not sell baby chicks. Illustrated circular free.

Andrews' Efficiency Egg Carriers

Guaranteed to be the safest carriers you can buy. They protect every egg, prevent customers' complaints and stop allowances for breakage. The Hatching-Egg Carriers come all in one piece (top and bottom) and have double sides and ends which ease all jolts. Eggs stand on end. No special fitting to put box together. Gummed address label with every Hatching-Egg Carrier.

Andrews' Efficiency Koop

"The coop without a nail." Top and bottom held by steel rods with pins at ends. No hammer needed. Come knocked down. Light—save express charges. Can be used over and over.

LOW PRICES

Single Koop, \$3.00 half doz.
Pair or Trio, 4.00 " "
Pen, 4.50 " "
Shipped only in half dozen lots.

E. B. Thompson's Imperial Ringlet Barred Plymouth Rocks

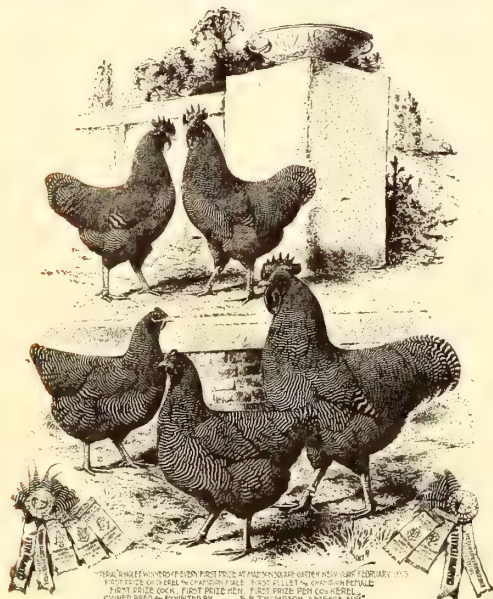

Win at the Imperial Show
of all the World

Madison Square Garden

New York, December 31, 1915 to January 5, 1916

Winners of every first prize offered at Madison Square Garden, New York, February, 1915—first cock, first cockerel, first pullet, first hen and first pen cockerel.

The following matchless record:
All the Ribbons and Prizes offered on
Cocks, Cockerels, Pullets and Exhibition
Pens, viz:

Cocks	1st, 2nd, 3rd, 4th and 5th
Cockerels	1st, 2nd, 3rd, 4th and 5th
Pullets	1st, 2nd, 3rd, 4th and 5th
Exhibition Pens,	1st, 2nd, 3rd, 4th and 5th

The President's Silver Cup for Best Display.

The Imperial Prizes of the Show, Sweepstakes Special for Champion Male and Sweepstakes Special for Champion Female.

Special for Best Shaped Male. Special for Best Shaped Female.
Special for Best Colored Male. Special for Best Colored Female.

Diploma presented by the American Poultry Association for Best Cockerel.

Specials for Best Cockerel and Pullet, Best Cock and Hen, Best Three Cockerels.

Every Silver Cup and Special Prize awarded. More First, Regular and Special Prizes than any exhibitor of any breed.

Madison Square Garden is the Recognized Pre-Eminent Quality Show of all America—it is the Center of a System Around Which All Other Shows Revolve.

My exhibit of 100 birds of supreme quality is an achievement hitherto unknown in the entries of Poultry Shows—unequaled in the annals of Barred Rock history.

The amazing records of all the prizes offered on Cockerels, viz: 1st, 2nd, 3rd, 4th and 5th, the last 3 years in succession; of all Prizes offered on Pullets, viz: 1st, 2nd, 3rd, 4th and 5th, for the second time at New York; both Sweepstakes Champion Male and Sweepstakes Champion Female for the third time at one and the same Show in Madison Square Garden, declares the Imperial "Ringlets" have reached the summit of superior excellence.

**If You Want the Best in Barred Rocks You Must Have My Imperial "Ringlets."
My Customers Are My First Thought and Nothing Is Too Good for Them.**

Grand exhibition and breeding birds of this richest First Prize New York blood for sale at reasonable prices.

Elegant Catalog Upon Request.

EGGS from the finest exhibition matings in all the world, \$10.00 per setting; four settings \$35.00; one hundred eggs \$60.00.

AMERICAN POULTRY JOURNAL

"WE LEAD - OTHERS FOLLOW"

Let Poultry Experts Tell You the Secret

HERE are a few expressions from Poultry Experts whose names and winnings are known to poultry raisers everywhere. They represent the highest success in every poultry line—show birds, market birds, layers.

Charles Thorgren: "Red Comb is the best conditioner I ever saw. I have fed Red Comb for more than eight years."

Mrs. J. H. Harnly: "The high honors accorded my birds proclaim loudly the excellent conditioning value of your Red Comb Feed."

J. E. Young: "Red Comb makes the hens lay and keeps them in the pink of condition."

C. E. Reed: "My five White Plymouth Rock hens in the International Egg Laying Competition were the heaviest laying pen of White Plymouth Rocks ever recorded in competition. They were raised and conditioned on Red Comb."

28 Eggs per Hen In One Month

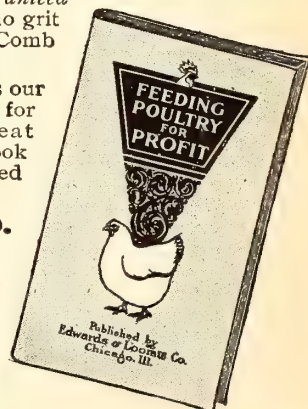

W. H. Hardin's pen of sixteen S. C. White Leghorn pullets, fed on Red Comb, averaged 28 eggs apiece during December. He writes: "Red Comb feeds are giving excellent results."

Red Comb is a scientifically balanced ration—ground from the finest whole grains—mixed by experts—backed by 45 years' experience. Red Comb contains the minimum of grit. Percentage guaranteed on each bag. Made with no grit if preferred. Feed Red Comb and join the profit makers.

Your name on a postal brings our free book, *Feeding Poultry for Profit*, written by six great poultry experts. With the book we will send name of the Red Comb dealer nearest you.

How to Make More Money from Poultry—with Anconas

"Next!"

Told in the new "Sheppard" Book—first copies of which have just been delivered by printer. *Send the coupon or write for a copy now.*

Are you breeding Anconas? Then you need this book. It tells how to make the most money from them—how to feed and care for them—the experiences of hundreds of Ancona enthusiasts. *Your copy is free.*

Are you breeding some other strain? Then you, too, should have my book. It will help you even if you don't buy Anconas. And it will show you how to make more money by changing to Anconas. Yes, it's chuck full of facts—and pictures—that's all.

Are you *planning* to raise a few, or many chickens? Then this free book will be worth its weight in dimes to you. Remember, I tell you what *others*, like yourself, are making from Anconas—in egg money, selling stock, exhibiting, etc. By all means get this book.

Do you want fresh eggs for home or market? Do you want to increase your profit from eggs? Do you want to start a Poultry Farm? Are you a student of poultry matters? Do you want winning stock? Or Eggs for hatching?

This book does not tell *everything*—well I should say not!—but it's bulging with so many worth-while facts, wrested from the experience of many people, that it will be mighty profitable reading—and it is free.

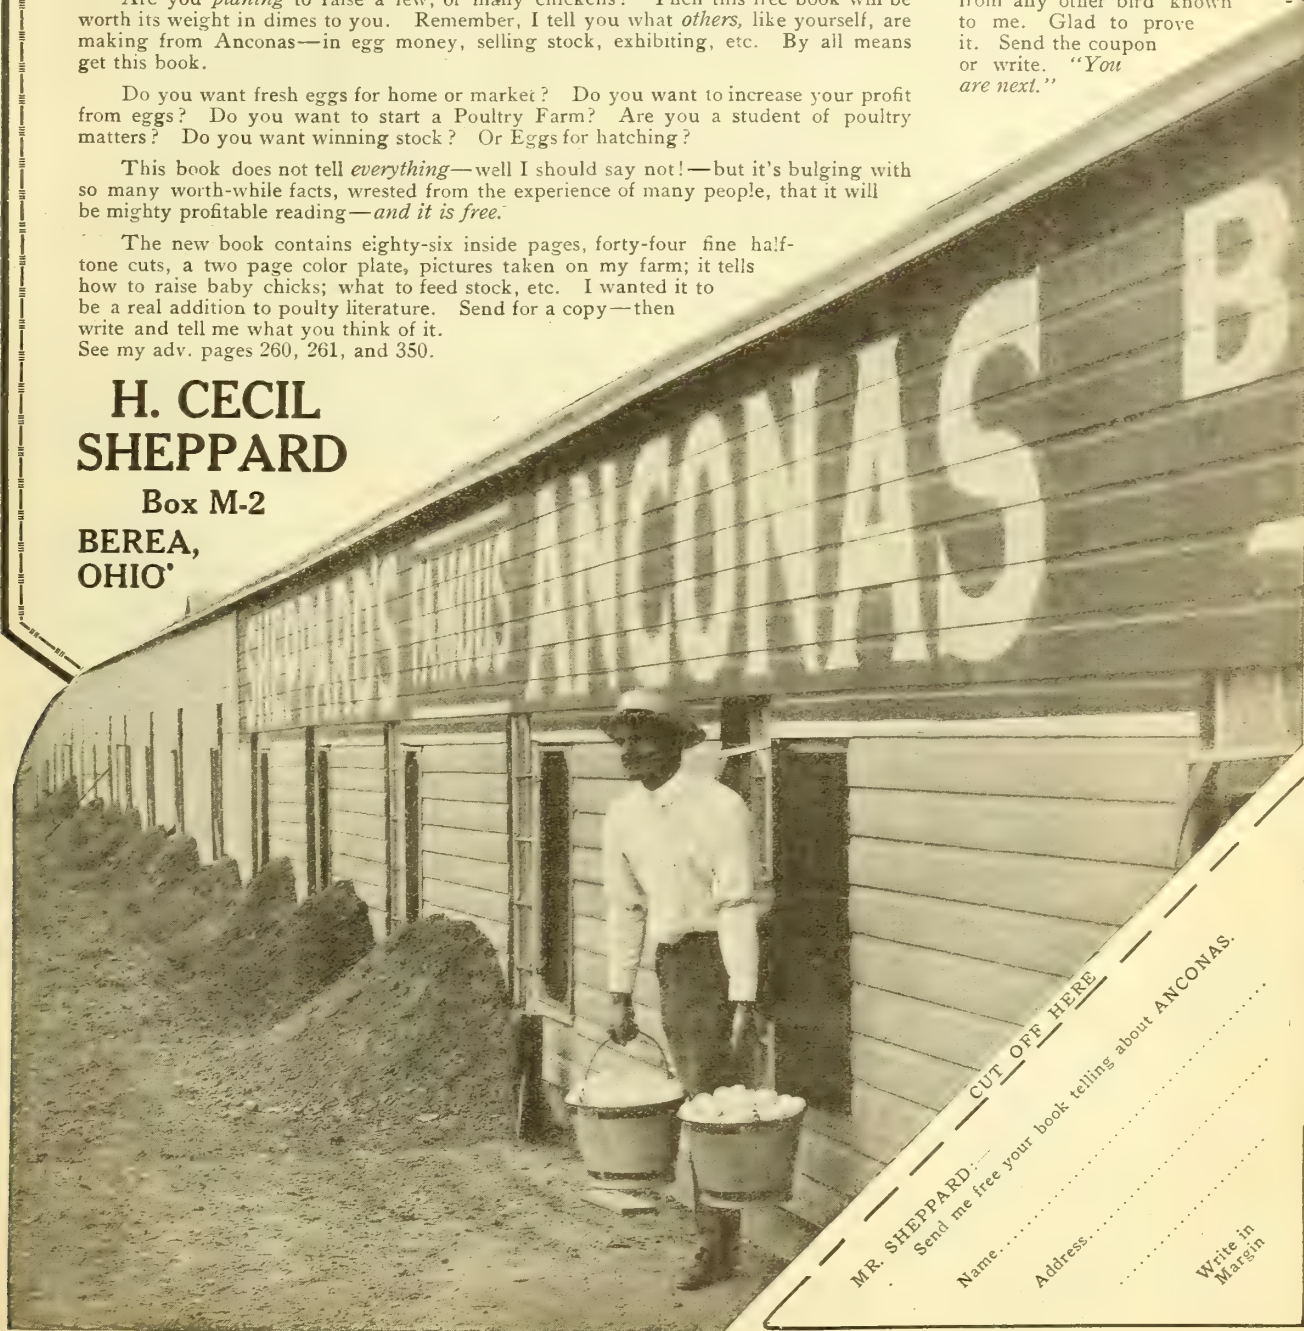

The new book contains eighty-six inside pages, forty-four fine half-tone cuts, a two page color plate, pictures taken on my farm; it tells how to raise baby chicks; what to feed stock, etc. I wanted it to be a real addition to poultry literature. Send for a copy—then write and tell me what you think of it. See my adv. pages 260, 261, and 350.

Well, I didn't mean to take you by surprise—popping out of a window that way—but here I am! No, this isn't all we get in one day. No, I don't often gather the eggs—but my photographer insisted that I "pose" for this. By the way, this is one of the 44 pictures in my new book. EGGS? Yes, you can get them at a lower cost from ANCONAS than from any other bird known to me. Glad to prove it. Send the coupon or write. "You are next."

EPHESIANS 4th CHAP. and 24th VERSE

**WE WANT
YOUR BUSINESS**

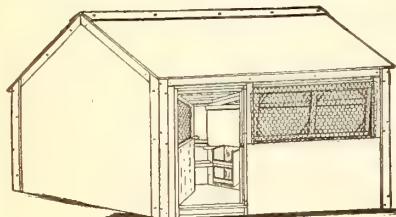

"Wherefore putting away lying, speak every man truth with his neighbor." Believing in practicing what we preach and as followers of the True Ad Club, to any would-be purchaser of our fowls or eggs we beg to state: We have no hens that are egg machines, or that lay 365 days in the year, or lay every week day and twice on Sunday, or hens that we will sell you for \$1.00 that lay \$50.00 worth of eggs in a year. If this is what you want, write the other fellow who specializes in these perpetual motion females. We care nothing about egg records and believe less that we hear about them. None of our females ever had to have a surgeon insert a silver tube in lieu of oviduct caused by being worn out working overtime laying. We are lovers and breeders of the beautiful and exhibition, as shown by our winnings at Panama-Pacific International Exposition, Palace Show and other places. We have no hankering after the utility or the business of the utility buyer—our experience has been he wants to buy for less than the huckster will pay. The class of stuff we offer for sale we do not advise the widow, afflicted and poor, to buy. "They have more of posterity than of prosperity." We have frankly stated our position; if it appeals to you, send us 30 cents in stamps for our New Colorotype catalog of S. C. Buff and Blue Orpingtons, R. I. Reds, Houdans, White Runner and other Ducks, White African Guineas, Peafowl, Japanese Longtails and Silkies, Wild Turkeys, 16 varieties of Pheasants. If catalog is not worth the money, return in 48 hours after receiving and we will refund price. We charge for catalog to protect ourselves against catalog fiends.

CHILES & CO. - MT. STERLING, KY.

P. S.—We just won at Cornell University Egg Show Contest, third prize on Orpington eggs, possibly not so bad for fancier breeder.

Preparedness

has made J. C. Fishel & Son the big guns of the poultry world. Over thirty years ago they began preparing by selecting the best variety and by careful mating and line breeding they have brought to the highest degree of perfection the wonderful strain of

WHITE WYANDOTTES

The World's Best

Brought them to such a high degree of perfection that they have conquered all competition at various shows, including the World's Fair at San Francisco. At the same time of preparing for exhibition birds Fishels also prepared for the meat and egg producing specimens until today it is a known fact that Fishel's White Wyandottes are the greatest layers.

Now is Your Time to Prepare

Take advantage of the preparedness and purchase your eggs for hatching or baby chicks from the breeders who have prepared in advance and who have built up these wonderful blood lines. They have twenty-five yards prepared of the grandest quality ever put together and the eggs vary in price and are very reasonable when you take into consideration the blood lines of their stock. Send for a copy of the mating list, setting forth the broad and binding guarantee they have prepared to protect you,

not only guaranteeing the fertility of the eggs but also guaranteeing the quality of the chicks hatched, allowing you to be the judge. Or if it is matured fowls you want, it is well for you to take advantage of their preparedness and get that bunch of heavy layers that you are wanting and which will produce for you an abundance of fresh eggs this season. Or if it is exhibition birds, they are prepared to furnish you what you may need in breeding or exhibition birds at reasonable prices. Send for the catalog they have prepared for you, which is full of information gained from over thirty-three years experience in the poultry business.

Have You Ever Thought of This?

The uncertainty involved when buying Eggs for hatching? Well, there is no uncertainty when buying from us. It is the same as buying so many Live Chicks from the Greatest Prize Winning Strain of their variety in America, at Egg Prices. You know in advance, just what to count upon.

Our Guarantee does it.

Every egg we sell for setting, we guarantee to be fertile. But who can say positively, just what Nature will do? They may be fertile on the 10th day after setting, but by the 18th day that fertility may be dead. What then? Ordinarily, You lose. Not so with us.

We positively Guarantee

a specified number of Chicks from each and every setting of eggs we sell. Should you fail to hatch the required number, we will supply eggs, until you do, without extra charges. Think it over. Our Price list tells more about it.

The fame of Our Stock is Nation-wide. If you have not read our List of Winnings, let us send one. It was Our birds that made that wonderful trip across the Continent, & was awarded Championship at Panama-Pacific Exposition. A splendid test of their vigor.

Exhibiting simultaneously, and with magnificent results, at two of the Greatest Shows of the Nation—Madison Sq. Garden, N.Y. and Glendale Show, Cal.—is an achievement which speaks for itself. In breeding our stock, special attention has been given to Egg-Producing qualities. They lay large, chalk-white eggs in great abundance. Awarded 1st Prize for Largest & Whitest eggs, wherever exhibited. Their utility qualities, equal their Prize qualities.

THE MARTLING SILVER CAMPINES
 The Strain without a Peer.

Before Buying Investigate **FREE** Get Our 1916 Illustrated Catalog ~

YOU may have your mind made up about which incubator you are going to buy. But don't place your order until you have read our catalog and learned ALL the facts about the Schwalge. Learn how the Schwalge, with its 3-pipe radiator, supplies the proper heat with least fuel; how the original Ventilation and Moisture Systems bring pure, fresh, damp air, full of life-giving oxygen, directly into the egg chamber; get posted on how this incubator grows from a single section to a mammoth incubator, just exactly as fast as your hatching requirements grow.

SCHWALGE Sectional INCUBATOR

You Run No Risk

When you order a Schwalge Sectional Incubator we give you an opportunity to use it in your own home and with your own eggs before we get our money. We know what a great incubator it is. We know that it cannot fail to please you. We know that it will do anything any other incubator does and do it better. We are willing to PROVE it to you at our risk. And if for any reason whatsoever, no matter what it is, a Schwalge Sectional Incubator should fail to satisfy you, you do not pay us a single cent. Honestly now, could we afford to make this offer unless we actually knew that the Schwalge was really the best incubator on the market? Use one and prove it before you pay.

hatches the largest possible percentage of fertile eggs. The chicks hatched in a Schwalge are lively, vigorous youngsters full of vitality, because they have been incubated with heat, air and moisture in the correct proportions.

Chicks do not die in the shell when you hatch with a Schwalge. The extra chicks a Schwalge saves from this common cause of poor hatches soon pay for this better incubator.

A Schwalge is built to last a lifetime. It brings off a good hatch the first time you use it, and ten years later it will do equally as well. When you divide the cost of a Schwalge by the many years of satisfactory service, you'll find it the cheapest incubator to buy.

You don't have to pay more for a Schwalge because it is better. Our prices are no higher than you pay for other good incubators, but you get many advantages not to be found in other machines.

The Sectional Idea

THIS is an exclusive feature of the Schwalge Sectional Incubator. It is the feature which enables you to start this year with one section—a complete incubator in itself. Next year, or at any time when your hatching requirements grow bigger, simply buy another Schwalge Section, connect it to the section you already have, and heat both sections with only one lamp. You can continue adding other sections as you need them and heat all of them with but one lamp. A patented arrangement permits the proper amount of heat to pass between the sections. Furthermore, each section is separately equipped with thermometer, double-wafer thermostat, etc., and is absolutely self-regulating.

If you buy a Schwalge Section this year, you have a complete incubator—the very best that it is possible to build. In future years, as you add other sections, you have but one lamp to look after instead of as many lamps as you have incubators.

Consider this feature carefully and decide to try a Schwalge at our risk.

Send This Coupon for Catalog

You simply cannot afford, in justice to yourself, to buy any other incubator until you have posted yourself about the Schwalge Sectional Incubator. Our sales so far this year have been 20 times as great as last year. More than half of the incubators sold this year are to people who already own a Schwalge. Our incubators must be good—better than others—if people who have bought one buy another. Find out for yourself how good they are. Get our Catalog FREE. Just send the coupon—N-O-W.

H. H. Johnson

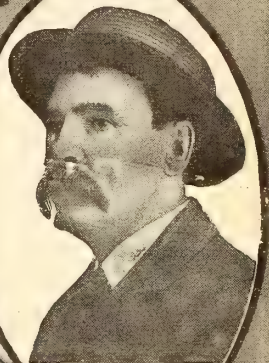

The "Early Chick" Gets the Market

IT'S the winter hatched chick that brings the top market price for broilers and fries in the early summer. And it's also the winter hatched chick that makes the busy laying pullet before fall, and that can be kept laying right along through the next winter, and that wins the ribbons at the shows. Of course you can make hatches at any time of the year, but *now* is the best time for profits.

Reader, have you got your hatches going? If not, let me send you an Old Trusty quickly and get started while the time is still good. In almost every corner of this country, from ocean to ocean, Old Trusty owners have their machines going for big hatches and big profits in 1916. It's the big hatches made at this time of the year

that mean the biggest profits later on, and it's hatching at this time of the year that proves the unbeatable quality in Old Trusty.

It takes the best construction and is a tip top hot water heating plant to make big hatches in cold weather. That's Old Trusty, as any one of its 650,000 satisfied customers will tell you.

M. M. Johnson
Inventor of
Old Trusty.

Now is the Time to Start Hatches in

Old Trusty

and if you are going to raise chickens at all this year, you want to make the most money out of them that you can.

We will ship Old Trusty to you in double quick time from factory at Clay Center, Neb., or from warehouses at St. Joseph, Mo., or Seattle, Wash.

And keep in mind that Old Trusty is the machine that comes to you ready for business the minute he arrives. There is no "assembling" to do, nothing to put together except to screw the legs on.

Also remember that Old Trusty is made in various sizes and that there is still a size for

Less Than \$10

delivered freight prepaid if you live east of the Rocky Mountains and a little more if you live farther west. Old Trusty sells at such a low price for such a top-notch quality machine only because he is made in such large

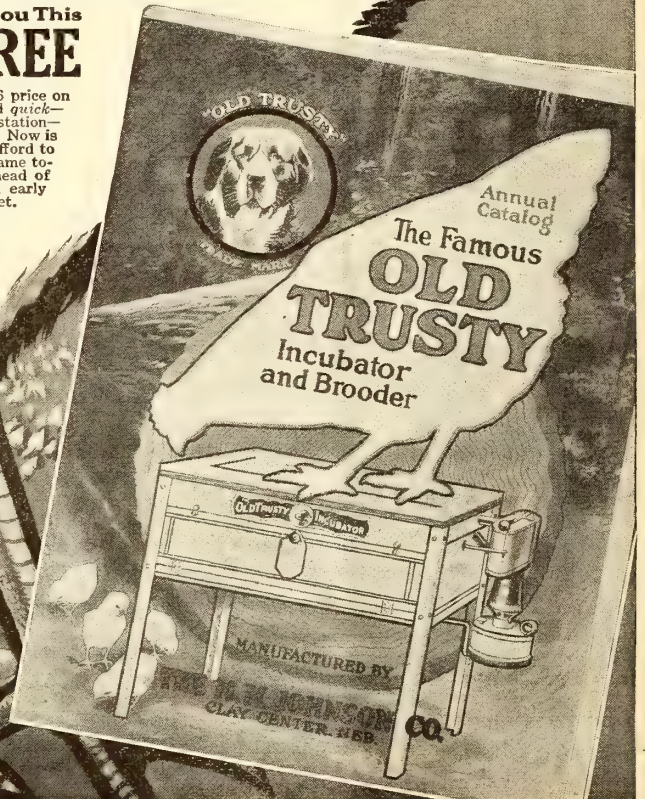

numbers by a home grown and home trained organization.

If Old Trusty was built in ordinary numbers or by an ordinary company he would cost a whole lot more. Our factory being the largest in the industry, with low overhead cost, you get the best that's made for a fraction of what you would expect to pay.

Let Me Send You This 136-Page **FREE** Book

and quote you our 1916 price on Old Trusty delivered quick—freight paid to your station—40 to 90 days' trial. Now is the time—you can't afford to wait—send in your name today and be weeks ahead of the usual crowd with early chicks for a top market. H. H. JOHNSON.

First Pen Cock, Heading
Grand Champion Pen
Chicago, 1916

Winners at the Great Chicago Show, 1916, the
largest show ever held in Chicago.

Easling Wins Again

and not only repeats his former success but wins the most
coveted prize in the whole show, Grand Champion
Pen of the show, with all varieties competing and with it
goes the LARGEST SILVER CUP OFFERED.

Parkside Strain is Line-Bred, I mean birds bred in line
for over ten years without the introduction of outside blood.
BIRDS bred up to the highest state of perfection and each
year's stock showing great improvement over those bred in
previous years. Every bird exhibited or sold, is bred and raised
on this farm. My catalog shows photos of their ancestors.
This is the place to come for honest birds, that will reproduce
themselves. I have thousands of satisfied customers, and
furnish quality at reasonable prices. I have plenty of breeding
stock to offer and **Conditioned Exhibition Birds**
that will win anywhere. Write your wants.

BRED-TO-LAY STOCK

I have a limited amount of stock in mated-up pens to offer
at reasonable prices, also males and females.

CHOICE EGGS FROM TRAP-NESTED HENS
with records of over 200 eggs a year.

I can furnish you good ordinary Breeding Stock, also incu-
bator eggs and day-old chicks in lots of 100 to 1000.

THE PARKSIDE POULTRY FARM

Box 40

N. P. Easling, Prop.

PEKIN, ILLINOIS

Bakersfield, Cal.

Dear Sir:—When it comes to
Parkside Leghorns I cannot speak too highly
of their quality and your treatment. The dif-
ferent breeders out here say that you are the
only EASTERN PANCIER who ever sends a
California his full money's
worth.—W. J. Coomba.

Irondale, Wash., Nov. 9, 1914.

Dear Sir:—Obtained 11 chicks
from a setting from pen No. 5, 12 chicks from
pen No. 4, and the shipment was delayed 6
days in Seattle by the Express Co. We shall
always be ready at any time to speak a good
word for your stock and your
treatment of customers.—Mrs. R.
H. Lowere.

Lockport, Ill., Jan. 13, 1915.

Dear Sir:—From stock which I bought of
you, I entered four birds at the January, Joliet,
Ill., show, winning 1st chl., 1st hen and 2nd chl.
A record I am quite proud of.—Herbert Food-
isch.

Strausburg, Mich., Jan. 4, 1915.

Dear Sir:—I am more than
pleased with the chickens I raised from the
eggs bought of you. I do not exhibit but in-
tend to when I have more of the same strain.
I would advise anyone wanting prize winners
to give PARKSIDE STRAIN a
trial.—Wm. G. Gesler.

Gridley, Ill., Jan. 9, 1915.

Dear Sir:—From eggs I bought
of you I raised the 1st, 2nd and 3rd chl. and 1st
and 2nd pen at Bloomington, Ill., show. Also
entered one chl. at Mt. Pleasant and won 1st
and sweepstakes. At Champaign I entered a
chl. and won 1st and champion
male.—W. H. Settle.

Lancaster, Ohio, Dec. 28, 1914.

Dear Sir:—I won 2nd and 5th
on cockerels at the Ohio State Show on birds
hatched from the eggs I got from you, and will
want more eggs again next Spring.—Fred
Stuck.

Bay City, Mich., Nov. 12, 1914.

Dear Sir:—Of eggs received
from you I hatched some of the finest birds
ever seen. I raised two cockerels in particular
which I would not part with for less than \$50
each. One has the same type of your first
Chicago cockerel 1914, and his
color is nearly perfect.—E. J.
Keena.

Moose Jaw, Sask., Can., Aug. 12,
1914.

Dear Sir:—Think it is about time I wrote
and thanked you for the way you treated me.
From the setting of eggs I hatched 12 fine
chicks. Have one cockerel raised from these
chicks that I consider the best
bird I have ever seen and I would
not take \$50 for him.—Thomas
Gibbs.

Anderson, Ind., Nov. 9, 1914.

Dear Sir:—Hatched 11 chicks
from the \$5.00 setting of eggs I bought of you.
In September I entered 4 pullets of this lot at
the Indiana State Fair, and got 1st and 2nd
prize. This is sure going some. \$150.00 would
not buy the birds we raised from
this setting.—Parker S. Short.

Beloit, Wis., Jan. 5, 1915.

Dear Sir:—On eggs purchased
from you in 1914 we won 1st and 2nd cock-
erel, 1st pullet and 1st pen. We also won 1st
hen and 1st cock on stock raised from your
1912 matings in a strong competition. Thanks
for your courteous treatment.—
Guy S. Lee.

Davenport, Wash., Dec. 21, 1914.

Dear Sir:—Entered 2 pullets at
the Spokane Poultry Show that were raised
from the setting of eggs we got of you, and
won 2nd pullet in strong competition with 1600
in the show. These birds certainly have the
true Leghorn type.—R. R. Cad-
cart.

Portland, Ind.

Dear Sir:—We won 1st on chl.,
1st on pullet and 1st on display at our County
Fair. These chickens were hatched from the
eggs we bought of you last March. We are
proud of our birds and presume you feel inter-
ested.—J. A. Elder & Son.

West Burlington, Ia., Jan. 4, 1915.

Dear Sir:—At Iowa State Pou-
ltry show won 1st and 3rd chl.; 1st, 2nd and 3rd
pullet; 2 silver cups, also A. P. A. medal for
best bird in Mediterranean class; only entered
5 birds. Our 1st pullet was the most attractive
bird at show. Thank you for fair
dealing.—Fritz Bros.

Peoria, Ill., Dec. 7, 1914.

Dear Sir:—From the setting of
eggs I purchased from you last Spring I raised
two choice cockerels, either one of which is
worth double the price of the eggs. I showed
one at the Peoria show and won 2nd prize on
him.—Rud Eberhardt.

Franklin, Tenn., Jan. 5, 1915.

Dear Sir:—I got 11 chicks from
the 15 eggs I purchased from you last Spring
and consider this very good for the distance
the eggs had to come. I think a whole lot of
the birds I raised and wouldn't care to part
with them.—Jesse J. Reams.

Two Sweepstakes Championships

At the December

COLISEUM SHOW, CHICAGO, ILL.

I TOLD YOU SO

But you may have taken my statement with a grain of a salt. Now, however, that I have won the lion's share of honors in the great contest between the quality breeders of the East, West, North and South in Single Comb.

WHITE LEGHORNS

no fair-minded man will question the right of my stock to be considered the equal of the best, both in exhibition and egg-laying qualities.

JUST CONSIDER THAT IN S. C. WHITE LEGHORNS

I won First and Third in Cocks

I won First Young Pen

I won First and Fourth in Cockerels

I won Second and Third Old Pen

I won the Coliseum Silver Cup for 5 Best Cockerels

I won the Coliseum Silver Cup for Best Display.

In Silver

CAMPINES

The Very Cream of the Best Fowls of the Country Were Exhibited.

THE CAMPINE CLUB OF AMERICA

held its annual meet at the Coliseum, and the leading breeders of the East—the head-liners in Campinedom—were present with their exhibits. The classes were the very strongest, everyone agrees, that have ever been exhibited and

THE GREATEST HONORS WERE MINE

I won TWO of the five awards in Cockerels

I won THREE of the five awards in Young Pens

I won THREE of the five awards in Hens

I won The Silver Campine Club Challenge Cup

I won THREE of the five awards in Pullets

I won The Coliseum Cup for Best Display

I won THREE of the five awards in Old Pens

I had 48 Campines entered; 38 were placed

Exhibition Stock I can furnish Leghorns and Campines for any show in the Country at very reasonable prices, and my guarantee to satisfy backs up every sale.

Utility Stock I have several hundred each of Silver Campine and S. C. White Leghorn breeding stock, males and females, at astonishingly low prices. Why not get the best, when they will cost you no more than inferior specimens? And, remember, I guarantee each sale.

Hatching Eggs November 1st I had 10 pens of each breed mated. December 1st I had 250 vigorous baby chicks. By January 1st I shall have 30 pens of each breed mated. I am now selling eggs from my all-star matings at very, very reasonable prices and I guarantee safe delivery and high fertility. Write today for my January, 1916 Announcement concerning show stock, utility stock and hatching eggs.

Write today for Stock and Egg Announcement.

FRANK E. HERING, Desk B, So. Bend, Ind.

Aldrich White Orpingtons

Are National Champions

AT the great *Madison Square Garden* show we again won the most coveted prize, *First Cockerel*, winning this on the cockerel which won first prize at Chicago Coliseum, Dec., 1915, and making this bird undoubtedly the

First Cockerel Madison Square Garden, 1915-16. Chicago Coliseum, December, 1915.

Champion White Orpington Male of America

Our record this season of 51 prizes at Allentown, Buffalo, St. Louis, Chicago and Madison Square Garden has never been equaled by any breeder of White Orpingtons in America. We won **First Cockerel at each** of these shows on different birds excepting at New York and Chicago. Our First Prize Chicago cock, himself a brother of our Madison Square Garden Cockerel, was also First Cockerel at Chicago, December, 1913 and is the only bird that has won twice at that show. These winnings, together with the fact that we won First Prize Cockerel for three years in succession at Madison Square Garden should thoroly prove that *Aldrich White Orpingtons are the Champions of America*.

High Egg Production and Show Qualities Combined

We have perfected our strain until our customers may now expect birds that will not only win in the show room, but lay as large a number of eggs during the year as any variety bred for egg production only. Why not take this fact into consideration and purchase

your foundation stock from the strain that is **BRED TO LAY AS WELL AS TO WIN**, when you can obtain it at prices no greater than are asked by any reliable breeder who sells stock bred only for egg production and not good enough to show.

Is Our Combination Strain Making Good?

The following letters, some of the many hundreds on file in our office, prove *Aldrich White Orpingtons win and lay*

Loveland, Colo., Jan. 15, 1916.

Aldrich Poultry Farm,
Columbus, Ohio.

Gentlemen:—The pullets from eggs purchased from you last season are certainly proving themselves to be great layers up to the present. They began laying November 13 and during December the whole bunch gave me a 60% average egg yield and so far this month at the rate of 70%.

One of the cockerels from these eggs scored 94 at two different shows and under different judges, winning first prize each time. He is sired by Quality Prince and I wish to get more of his eggs later.

Yours very truly,

EARLE BARRETT.

Colby, Kans., January, 19, 1916.

Aldrich Poultry Farm, Columbus, Ohio.

Gentlemen:—Please let us trouble you with a report on the records of the pullets which were raised from eggs from your last season's matings. We selected five pullets and put them in a pen on an egg ration on December 29 and the trap-nest records from January 1 to January 19, show that these five pullets laid 72 eggs, the individual records being: 17, 16, 14, 13, and 12. This is at the rate of 118 eggs per month or more than the highest record pen at the National Laying Contest at Mountain Grove in December.

I must confess that they promise to surpass my Tom Barron Leghorns for laying and will send you a later report of the records made by these birds.

Yours very truly,

E. B. BARNES.

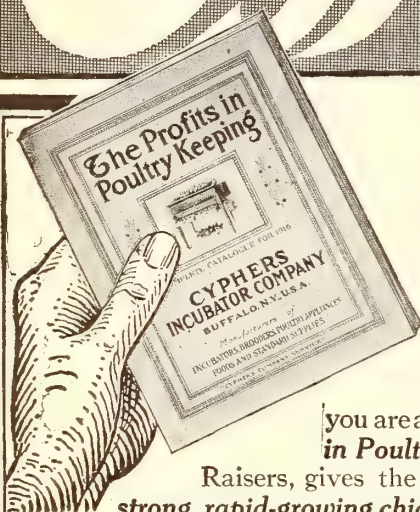

First Cock, Chicago Coliseum, 1915

If you wish to breed exhibition birds with a high laying record and want the most beautiful, hardiest and quickest growing variety of fowl, the White Orpington, and send for our beautiful catalog and mating list, giving prices and complete description of the thirty best pens of White Orpingtons the world has ever known. It is free if you mention American Poultry Journal.

ALDRICH POULTRY FARM 5073 N. High St. COLUMBUS, OHIO

The Cyphers Co's

Free Year-Book

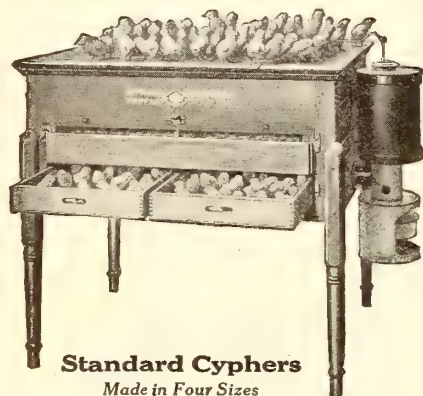

Thousands Have Asked For This Big Book. Have You?

YOUR SUCCESS, Reader—your profits for the coming year—will depend almost entirely on the number of chicks you are able to hatch and raise this spring. **"The Profits in Poultry Keeping,"** our 172-page Guide for Poultry Raisers, gives the "Cyphers Way" of producing **big hatches of strong, rapid-growing chicks**—"the kind with the kick in them;" shows how to **rear the chicks** without loss and danger of costly set-backs that stunt their growth and development; tells how to produce broilers, layers, breeders and show-room prize winners in the shortest time and at least expense. This book tells how you can pay for your incubator by hatching and selling day-old chicks. The introductory "Open Letter" by Grant M. Curtis, President of Cyphers Company, is **worth many dollars** to every poultry keeper who will read and heed the advice it gives. Address our **nearest office** and you will receive the book by return mail. A postal will do.

Three Styles—Eight Sizes

No matter what style of incubator you prefer—whether hot-air or hot-water heated—there is a Cyphers-built machine in a size to suit your needs. Take advantage of our 20 years of leadership as manufacturers of the incubators that have long been recognized by poultrymen everywhere as the "standard hatchers of the world." Users will tell you that Cyphers-built incubators **hatch better, last longer**, require **less attention** and hatch **stronger, healthier chicks**—the kind that live and grow. Thousands of the most prosperous poultrymen owe their success to Cyphers equipment and have frankly stated that they could not have succeeded without it. Why experiment—why take costly chances? **Make your success certain** by using the successful man's incubator! Secure the latest improvements with time-tried principles and construction, combining efficiency, economy and durability.

Standard Cyphers

gest poultry successes of the last 20 years. Are the last word to date in incubator building, and with reasonable care will last a lifetime. Read reports in our Year-Book from hundreds of successful poultrymen. (See illustration.) **Guaranteed to you personally.**

A Complete Guide for Properly Hatching and Brooding Chicks

The "Cyphers Way" Is the Sure Way

HAVING SUCCEEDED in producing big hatches of strong, vigorous chicks, *why risk losing them* by following improper brooding methods? *Every chick saved* by correct brooding will count big when the season's profits are figured. Every requirement for successfully raising chicks is provided by the "Cyphers Way." To be strong and vigorous, brooder chicks must be provided *automatically* with a *constant* supply of *pure, fresh, warmed air*. All these essentials are embodied in Cyphers Brooders and Hovers.

Cyphers Adaptable Hover. Price, \$9.00.

Cyphers Style B Three-Apartment Brooder.

Standard Cyphers Brooders

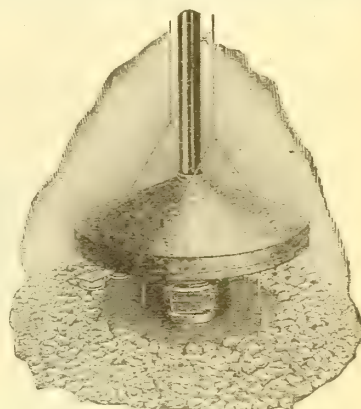

Have no equal as efficient brooding heater combined with latest-improved brooder case. Are equipped with Cyphers Adaptable Hover. Most popular Brooders on market. Keep chicks *safe and comfortable in any weather*. Convenient to use, easy to clean, readily movable. Shipped knock-down at lowest freight rates. *Style A*, for outdoor use; has two apartments. Price, \$14.50. *Style B*, for outdoor use; has three apartments. Price, \$18.50. (See illustration.) *Style C*, same as *Style B*, but has double-insulated walls in hover apartment; for cold climates. Price, \$20.00. *Style D*, for indoor use; has two apartments. Price, \$13.50.

Adaptable Hover

A popular and efficient outdoor and indoor brooder at a low price. Many thousands in successful use in all parts of the world. *Self-regulating, self-ventilating*, fume and gas-proof, all metal and fire-proof. Lamp cannot blow out. Easily attached to *home-made brooder case*, large goods box or small colony house; can be used in any hen house, closed shed or out-building. Used in all Standard Cyphers Brooders. (See illustration.) *Fully guaranteed.*

Portable Hover

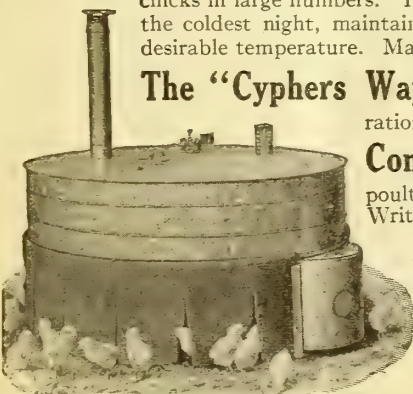

Provides a low-cost, convenient, practical way to brood chicks indoors. Set it down anywhere indoors and you will have a safe and comfortable home for the chicks. Movable at a moments' notice without even turning down the lamp flame. Is an *all-metal, self-regulating, self-ventilating*, complete brooding device, automatic and economical. Needs no brooder case or box enclosure. Chicks on level of room floor all the time. (See illustration.) *Fully guaranteed.*

Coal-Burning Colony Hover. Price, \$15 Up.

Coal-Burning Colony Hover

Broods chicks in flocks of 300 to 1,500, and at *less expense* than ever before. In health of chicks, in low cost of labor and fuel, in simplicity and ease of operation, it *has no equal* for brooding chicks in large numbers. Its ample fuel capacity and automatic regulator, will keep the chicks warm throughout the coldest night, maintaining a regular temperature of 90 to 95 degrees under hover and keeping room at desirable temperature. Made in *five sizes*. Write for Special Circular. (See illustration.) *Fully guaranteed.*

Cyphers Portable Hover. Price, \$9.00.

The "Cyphers Way" of Feeding

Equally important with proper brooding is *correct* feeding. "The Cyphers Way" provides a *complete* line of balanced-ration, special-purpose poultry foods. Look up our "Poultry Food" Adv. on another page.

Complete Course in Poultry Raising

Cyphers Company's FREE Books and Bulletins cover every phase of poultry keeping, and will help solve your poultry problems. Absolutely free to customers. Write TODAY for our Year-Book giving details. A postal will do. Address nearest office.

F. E. HARRISON'S ROYAL REDS

R. I. Reds Lead all Others by such a Big Margin that They are Easily Entitled to the Claim of the World's Greatest Strain of R. I. Reds.

1st Young Pen, Chicago (1914). Royal Reds have won Three 1st Prizes and One 2nd in the past four Chicago Coliseum shows; one of the many World's Records held by Royal Reds.

You will then realize that the claim of the World's greatest strain has been well earned.

King Royal, first Coliseum cock bird, December, 1915, won first and champion male of the entire show in the January Greater Chicago exhibition (he being the only S. C. I. entered).

I can sell you eggs that will produce grand winners for the next season shows, and can furnish you with the best breeding and exhibition stock of any Red breeder in the world.

Write me your wants; let me know just what you need. Your correspondence and order will get my prompt and best attention.

Our show record speaks for itself, and if you will compare our winnings with all my competitors, more than two hundred in the last four years, you will find that Royal Reds have won more First prizes, and more second prizes, than all these competitors combined, and that Royal Reds have never lost First Best Display in any show where they competed for it.

National Show Time is Harvest Time for Royal Reds.

When you stop to consider that Royal Reds have won fifteen first prizes at the Chicago Coliseum in the past four years, while all competitors won but nine.

When you stop to consider that at the Greater Chicago Show, January, 1915, Royal Reds won six first prizes, six second prizes and six third prizes.

When you stop to consider that Royal Reds have the greatest number of high class breeding and show birds in their pens this year, by far more than any other Red breeder.

F. E. HARRISON

Box 30

American Poultry Journal, Chicago, Ill.

Established 1874

Has the envious reputation of being "The One Great Poultry Paper of America." It's the oldest poultry paper in America and the largest and best poultry paper in the world. Its circulation covers the entire United States, Canada, Mexico, and several hundred copies are sent to foreign countries where the best is considered just good enough. It contains from 68 to 252 pages each issue, and is mailed to subscribers promptly on the first of each month.

American Poultry Advocate, Syracuse, N. Y.

Established 1892

Is one of the most widely known and consistently advertised publications in the field. It is composed of interesting and instructive reading and is conceded to be one of the best, clean-cut poultry papers in the east. Published monthly.

Poultry Item, Sellersville, Pa.

Another "breeder's choice;" is well edited, progressive, and instructive, finding popular favor among those poultrymen who enjoy good editorials, not "muckraking." The helpful hints given in the many articles are advantageous to both amateur and professional. Published monthly.

**These three papers,
the choice of breed-
ers, will be sent to
you postpaid every
month for one year,
at half price.**

American Poultry Journal, 1 yr., \$1.00	} All 3 for \$1.00
American Poultry Advocate, 1 yr., .50	
Poultry Item, 1 yr., .50	

The three papers being sold together for the price of American Poultry Journal alone makes this one of the best offers which can possibly be made.

Both new and renewal subscribers may take advantage of this offer. New subscriptions will commence with current issue. Renewal subscriptions will be extended one year from expiration of present subscription. **This offer void after May 31st, 1916.**

A WEALTH OF POULTRY KNOWLEDGE

Save One Dollar

Here is your opportunity to get the three oldest poultry papers in America at half price. All three are published monthly—filled with good, sound, helpful advice, which may save you many times the cost of your subscription.

**Three for
the price
of One—**

That's what
you get when
you subscribe
to this com-
bination at
this time.

American Poultry Journal, Chicago, Ill.

Established 1874

"The One Great Poultry Paper of America" is conceded by all to be the leading poultry paper of the world. It contains from 68 to 252 pages in each issue, profusely illustrated; contains no free reading notices or puffs for advertisers, but sound common sense articles, the kind that are profitable to both amateur and professional poultrymen. Mailed to subscribers promptly on the first of each month, it arrives when expected and avoids disappointment.

Western Poultry Journal, Cedar Rapids, Ia.

Established 1889

Has long been recognized as one of the most up-to-date and progressive poultry papers of the West. Edited by E. E. Richards, the present President of the American Poultry Association. Clean, instructive common sense articles on the care of poultry—and editorials of like nature make this one of the favorite poultry papers in the Western States.

Poultry Keeper, Quincy, Ill.

Established 1883

Is the second oldest poultry paper of America. Although not as large as the other two, it has a following of readers who stand by it like the "Rock of Gibraltar." The many interesting articles each month make it well worth reading and it fits nicely into this well selected combination of poultry papers.

American Poultry Journal, 1 year, \$1.00	} ALL FOR \$1.00
Western Poultry Journal, 1 year, .50	
Poultry Keeper, 1 year, .50	

No matter where you are located, how many chickens you keep or how much you know about poultry, you cannot afford to let an opportunity like this slip by. Think of it—ALL THREE for the regular price of American Poultry Journal alone.

Both new and renewal subscribers may take advantage of this offer. New subscriptions will commence with current issue. Renewal subscriptions will be extended one year from expiration of present subscription. This offer void after May 31st, 1916.

Racine

25 Times World's Champion

"In 25 world's greatest matches Belle City won with perfect hatches"

Learn how *World's Championship Prize Winners* make their big hatching increases and big cash profits. You can do the same as easily as they do. They tell you how in my big Free Book, "*Hatching Facts*"—their own experience in their own words—with one hundred actual photographs of prize-winning hatches. Users of my Belle City win championships every year in competition with users of all other makes—many never having used an incubator before.

But better than the 25 World's Championship is the big hatching success and profit-paying success of hundreds of thousands of users of my Belle City in all parts of the country. 402,000 in use. In my big Free Book, "*Hatching Facts*," I publish, for your information, many letters from users in every community telling their experience—the most profitable record of poultry success you can have. Write for book. Besides the valuable pointers which winners give you, the book contains full description—all facts—proofs—particulars about

Belle City Incubators and Brooders

"An outfit made for hatching that there's no such thing as matching"

The book shows that my Belle City has everything worth having in and on an incubator—copper tank—double disc

See what the 25 Times World's Champion Belle City Hatching Outfit is like

Get My \$1300.00 Gold Offers

With the Free Book comes my \$1300.00 Gold Offers for the season now beginning. Conditions so easy anyone may receive biggest pay.

Learn how I paid one Belle City user \$156.25—another \$50.00—two others each \$45.00—many others from \$33.00 down.

Get the book. With it comes my ten-year personal money-back guaranty—my low price—same as last year—freight prepaid 1, 2, 3 months' home test—everything.

Learn how thousands have made big hatches and cash profits with my 25 Times World's Champion Belle City Incubator—how my World Famous Belle City Brooder saves the chicks and raises the highest percentage—how you can make the most money out of chickens this year whether you go into it on a large or small scale.

"Simply beats the dickens
How it hatches out the chickens"

Don't let this big opportunity slip. Write me today

self-regulator, safety lamp, double walls and double door and dead air space all over, with roomy nursery and strong egg tray. "Tycos" thermometer, egg tester, sun hinge burner, funnel—everything you need, including valuable instruction book on operating, hatching and care of chicks. The book tells you all about my World Famous double walled top heat Belle City Brooder guaranteed to raise largest percentage of chicks every time—a fitting companion to my World's Champion Belle City Incubator.

This is the kind of hatching outfit that has made all these wonderful Belle City records, the very same kind of hatching outfit that I will send you if you decide to own a Belle City and join the profit makers. But first of all see my Free Book. It costs you nothing but a postal. Write me today for book, "*Hatching Facts*." Jim Rohan, Pres.

Just Out—FREE

The new 1916 Prairie State Incubator Catalog is now ready. We want to send you a copy, FREE and postpaid. Just write your name on a postal and we will mail you one at once. Describes the famous

PRAIRIE STATE Incubators and Brooders

These splendid machines are used and endorsed by Poultry Experts the world over. For example: Prof. Jas. E. Rice, Dept. Poultry Husbandry, Cornell University, Ithaca, N. Y. writes:

"The fact that we recently purchased a number of Prairie State Incubators is perhaps the best evidence of the high opinion which we hold of your machines."

Mr. M. Kleppinger, Centre Valley, Pa., writes of Prairie State chicks: "From 1,000 chicks the loss was only 7 per cent. They have the right move and looks. When I opened the boxes they jumped out like crickets."

If you want to get the best results and

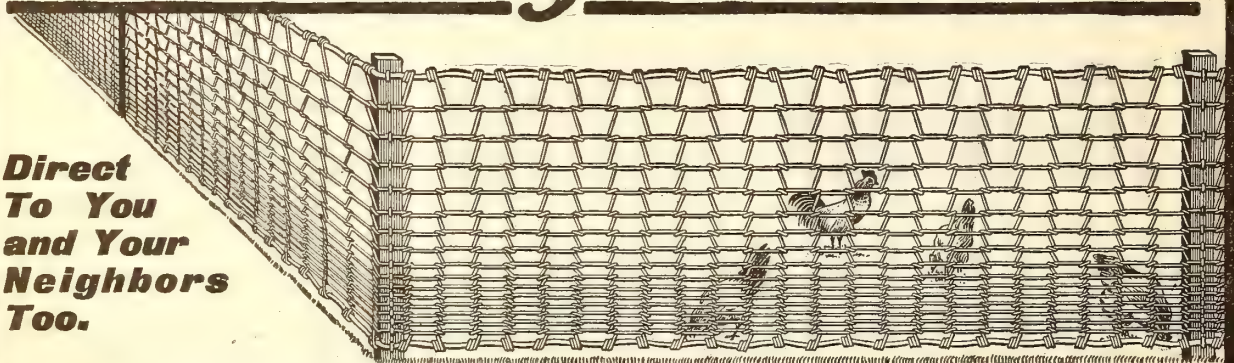

"Hatch the Most Chicks that Live"

start with a Prairie State outfit. Free catalog tells all about the exclusive features of these machines. Describes the Prairie State moistened Sand Tray which keeps the eggs in moist natural heat. Explains the Eddy Current System of Ventilation which carries off deadly gases, and supplies the necessary oxygen for raising strong, healthy, early maturing chicks. Don't buy any incubator until you get the 1916 Prairie State catalog. IT'S FREE — POSTPAID. SEND FOR IT TODAY.

Poultry Fence

**Direct
To You
and Your
Neighbors
Too.**

48 Inches High 24c. a Rod. 60 Inches High 28½c. a Rod.

Not a flimsy netting but a Poultry Fence. Made of Open Hearth Basic Steel wire, drawn, annealed and galvanized in our own mill. A strong, durable, **Rust Resisting Fence** that will last for years. Closely woven—line wires only 1½ inches apart at the bottom. Stays 4½ inches apart. Positively the biggest poultry fence value ever offered at the price.

48 Inch Combination Poultry and Stock Fence 32½c. a Rod.

This extra ordinary fence has same construction as above but made much heavier. Woven close enough to turn chickens and strong enough to turn stock. Line wires spaced 1½ inches at bottom. Stays 6 inches apart. Stretches perfectly and stands up on the posts like a farm fence. Does not sag, bag or buckle. The best combination poultry and stock fence on the market for the money.

SOLD DIRECT TO YOU AT MONEY SAVING PRICES.

Large Catalog showing 100 styles of Farm, Poultry and Lawn Fence, also **Special Prices on Steel Posts** mailed free on request. Write for it today.

KITSELMAN BROTHERS, Box 295 MUNCIE, INDIANA.

Guaranteed to Raise Every Livable Chick

Thousands—yes, tens of thousands—of poultrymen are now raising every strong chick, where formerly they lost half or more of the hatch. Seems impossible, yet that is actually the wonderfully successful result of feeding their baby chicks

Pratt's Baby Chick Food

Costs Only a Cent a Chick for Three Weeks

A real baby food for baby chicks—75 per cent. predigested. It carries the newly hatched brood safely through the critical three weeks period, when losses usually occur. Prevents white diarrhoea, intestinal trouble, and leg weakness. Makes bone, muscle and rapid growth.

It Makes Chicks Live

Read what Mr. Lester Tompkins, known throughout the poultry world, as a most successful breeder says. "I have great faith in it and have had wonderful success in starting my chicks this year, having hatched out about 2,800, and I have lost less than 200, a part by hawks, crows and rain. But the little, weak chickens which we generally expect to lose within a few days seem to live and grow just as well as the others on the Pratt's Baby Chick Food."

"I cannot say too much in favor of this Baby Chick Food for baby chicks. For starting them it certainly produces wonderful results and no need of losing any chicks. I have just got to feeling I must have it when I have little chicks coming along, as they take such a start and the weakly ones brace up and seem to be as strong as the rest. You can certainly quote me as recommending it for baby chicks."

25-lb. Bag \$1.50, 14 lbs. \$1.00. Packages at 50c and 25c.

Pratt's Poultry Regulator

Keeps young and grown birds in perfect health, and thus prevents ordinary diseases. Insures early maturity. Pullets become profitable layers. Costs only a cent a fowl per month. 25-lb. Pail \$2.50. Packages at \$1.00, 50c and 25c.

Pratt's White Diarrhoea Remedy 50c and 25c.

Pratt's Poultry Disinfectant and Liquid Lice Killer

1-gallon can \$1.00, quart size, 35c.

Pratt's Powdered Lice Killer

50c and 25c, in sifter top cans.

Insist on Pratt's.

Refuse substitutes.

Kentucky State Fair, 1915—In a class of 133, competing against the world's best breeders of the Mid-West, I won 1st, 3rd and 5th Cockerel, 1st and 2nd Pullet, 2nd Pen. My matings are equal to any in America and if you wish to improve your flock I can sell you eggs that will produce results. My birds are layers as well as winners, and an Improver pullet now leads the club pen at Missouri. My new catalog is free. Eggs, \$5 per 15; \$9.00 per 30.

L. J. DEMBERGER

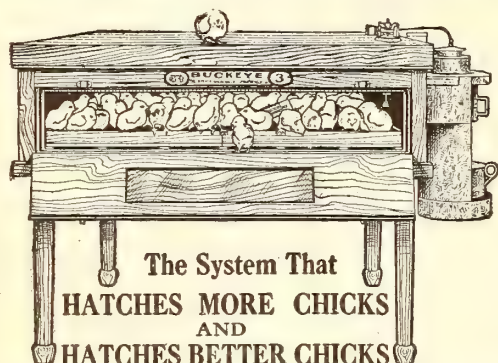

Box 89

STEWARTSVILLE, INDIANA

"Buckeye"

"The Best Incubator Made"

The System That
HATCHES MORE CHICKS
AND
HATCHES BETTER CHICKS

Than any other incubator regardless of size, price or method.

Recognized by the largest breeders and the largest poultry supply dealers as the safest and surest incubator ever built. Every machine a guaranteed success.

FOR THE BIG BREEDER the 600 egg "Buckeye" will produce more chicks and stronger chicks than any big incubator you ever owned. We guarantee that. Operated with one lamp on a quart of oil a day and guaranteed to work perfectly in any temperature down to freezing.

FOR THE SMALLER BREEDER any of the other six sizes are guaranteed to do everything the big machine will do. Even the little 60 egg "Buckeye" at \$7.50 will hatch more chicks and better chicks than any other incubator—no matter what its cost.

It's the Best Incubator Made

Not the cheapest incubator but the best.

It's the incubator that is built UP to a standard and not DOWN to a price. That's why the "Buckeye" is sold by more reliable dealers than all the others combined—that's why so many of the large, successful breeders will use no other. The "Buckeye" is sold by more than two thousand of the largest poultry supply dealers and there are over 400,000 in successful operation! Let us send you a list of some of the big breeders who use the "Buckeye" and their reasons for using it. Let us send you the names of the largest dealers and their reasons for selling it. Let us tell you about the wonderful success of the "Buckeye" system and why so many have tried to imitate it. The "Buckeye" is made in seven sizes—60 eggs to 600 eggs.

600 Eggs	-	-	\$50.00

SUNSWICK POULTRY FARM

Rufus Delafield, Owner

Box J, SOUTH PLAINFIELD, N. J.

I Will Tell You How to Make Poultry Healthy

Make Hens Lay

Make Chicks Grow

Now that mating time has arrived, it's up to you to see that your poultry get a tonic and internal antiseptics to make them vigorous and free of disease. *Therefore, feed Pan-a-ce-a.*

In that condition your hens will lay better, you will get more healthy, fertile eggs and the chicks will stand a better show of reaching maturity. *Therefore, feed Pan-a-ce-a.*

And, before the hatches come, I want to warn against gapes, leg weakness and indigestion, for these ailments are responsible for half the baby-chick losses. *Therefore, feed Pan-a-ce-a—it will save you these losses.*

My lifetime experience as a veterinarian, a doctor of medicine and poultry raiser has taught me the needs of poultry under all conditions; that is why I urge you to try my scientific and long-tried prescription,

Dr. Hess Poultry PAN-A-CE-A

It's a Tonic—Not a Stimulant

Here are a few of the valuable ingredients in Pan-a-ce-a to meet the requirements of your poultry which I have just stated:

Nux Vomica, a nerve tonic; *Carbonate of Lime*, a shell former; *Hyposulphite of Soda*, an internal antiseptic; *Quassia*, an appetizer; *Iron*, to enrich the blood, and other valuable ingredients, all well known and recommended by the highest medical and veterinary authorities.

Perhaps the strongest argument in favor of Pan-a-ce-a is the fact that it has been on the market for 22 years and is growing in favor each year. Read the guarantee in the right-hand panel—that is your protection.

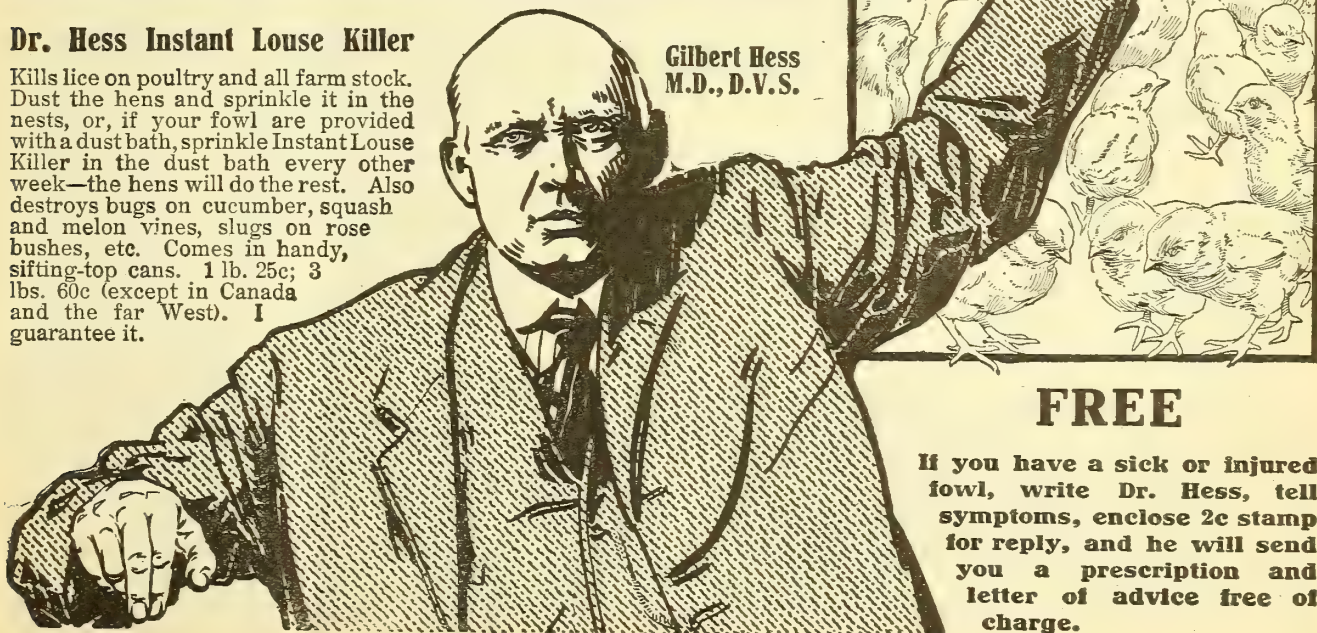

There is a Dr. Hess dealer in your town, a man whom you know, a man who stands back of my guarantee and will return your money if Pan-a-ce-a fails to make good. 1½ lbs. 25c; 5 lbs. 60c; 25-lb. pail, \$2.50 (except in Canada and the far West).

DR. HESS & CLARK, Ashland, Ohio

Dr. Hess Instant Louse Killer

Kills lice on poultry and all farm stock. Dust the hens and sprinkle it in the nests, or, if your fowl are provided with a dust bath, sprinkle Instant Louse Killer in the dust bath every other week—the hens will do the rest. Also destroys bugs on cucumber, squash and melon vines, slugs on rose bushes, etc. Comes in handy, sifting-top cans. 1 lb. 25c; 3 lbs. 60c (except in Canada and the far West). I guarantee it.

Gilbert Hess
M.D., D.V.S.

My Guarantee

So sure am I that Dr. Hess Poultry Pan-a-ce-a will help make your poultry healthy, help make your hens lay and your chicks grow that I have told my dealer in your town to supply you on condition that if Pan-a-ce-a does not do as I claim, return the empty package and get your money back.

FREE

If you have a sick or injured fowl, write Dr. Hess, tell symptoms, enclose 2c stamp for reply, and he will send you a prescription and letter of advice free of charge.

OTHERS

MARCH, 1916

F. M. CLEMANS—PIONEER POULTRYMAN

F. M. CLEMANS, Mechanicsburg, Ohio, was born in Spring Valley, Ohio, in 1867. His father was a Methodist minister. When a boy 14 years old he became very much interested in poultry and poultry literature. He first took up Game Bantams and won at a number of shows. Then he bred R. C. Brown Leghorns, Polish, Brahmas and several other varieties searching for the kind he liked best. Finally, when only about 20 years old, he originated Black Wyandottes and made quite a success with them. At that time he was a regular correspondent for several poultry journals, including *AMERICAN POULTRY JOURNAL*. Some years later he became much occupied in other business interests, including lumber, merchandise and general farming, as well as being in the banking business for about 26 years. During this busy period

poultry was dropped for a few years, except that he always retained a pen-of a few "good ones" for home use and to satisfy his fondness for good poultry.

In 1902 he began more active poultry operations again and started crossing with a view to combining Plymouth Rock size and type with Light Brahma color. He was successful in originating a strain of Columbian Plymouth Rocks, which are now well known thruout the country and have become very popular. He now specializes in this variety and prefers them to any other. He has a record of 33 years as a breeder of pure bred fowls, is a life member of American Poultry Association, first vice-president of the American Columbian Plymouth Rock Club, and has won prominence as a successful breeder and exhibitor.

Successful Hatching With Incubators

What To Do and Some Things That Should
Not Be Done.

By Prince T. Woods, M. D.

EARLY IN THE SEASON when broody hens are hard to find and fickle of disposition when found, the poultryman naturally turns to artificial incubation to make sure of getting early chicks. Nowadays the choice of an incubator is not nearly so serious a matter as it was a number of years ago. There are quite a number of good ones, any one of which will yield good results if the directions are followed.

The size of the machine will depend upon the amount of hatching you intend to do. In small machines you get incubators that will hatch well that cost very little, and, if you want the very best, you can get a machine well-built, finely-finished and fully guaranteed at a very reasonable price. If you want a big hatcher, there are mammoth machines, heated by oil, gas or hot-water coal stove, of practically any capacity you may need. We have used most of the leading makes of small machines and found them all good. We have observed the work of the mammoth machines of the leading makes, and find that all of them have users who are ardent advocates.

The beginner, when selecting a machine, will do well to consider carefully the reports of actual operators of the incubators, to call upon neighboring poultry plants and get the testimony at first hand. Try to get an unbiased opinion from some man whom you know to be successful and whose advice you are willing to follow. Don't ask which is the best machine, after using a dozen different makes and getting good

hatches out of all of them, we positively do not know which is the best incubator.

If you are going to buy an incubator this spring, better get your order in now. The longer you put off ordering, the longer you will have to wait for your machine. When you get the machine and remove the crate, get the instruction book out of the egg chamber and read the manufacturer's directions before you do another thing. You will find advice about setting up the machine, about location, and how to operate. Read and digest these directions before you begin setting up the incubator.

The best place to operate an incubator is in an incubator cellar. The next best place is in a well-ventilated room in a house cellar, where the machine will be away from the furnace or house heater, and where the temperature of the room can be kept fairly uniform and between 50 and 60 degrees F. About the worst place to operate an incubator is in a house living room or in a shed-roofed building at ground level. Some good hatches have been had from machines operated in kitchens, but we prefer a good cellar. The incubator room should have an abundant supply of fresh air without drafts and without too great changes in temperature.

Level up the incubator before you start to heat it. Block up the legs until you get it level and be sure that it sits firmly in position. When warming up the machine do not try to get too much heat at first. Go slow and let it warm gradually. It takes quite a while to get it up to temperature the first time and to dry out the moisture and take the chill out of the packing. Don't be in a hurry. As the temperature begins to climb, watch the thermometer and be ready to adjust the regulator when the proper degree of heat, as stated in the directions, is reached. Let the machine run empty for the first three days and be sure that it is adjusted so that it will maintain a fairly uniform degree of heat. The first time it may take several adjustments to get the regulator just right. When you secure the proper adjustment, let the regulator alone and do not let anyone else monkey with it. Run with a medium size flame on the lamp or gas jet. If a coal heater, run with a fairly low fire. Keep things clean.

Before warming up old incubators be sure that they are well cleaned. Use some good saponified cresol disinfectant to cleanse and purify the interior of the hatching chamber. Keep trays and hatching chamber clean. Don't start a new hatch until you have thoroly cleaned up the machine from the last hatch. Don't fail to follow the manufacturer's instructions.

When you have the incubator warmed up, regulated and running nicely, everything is ready to start the hatch. While an experienced operator can hatch the eggs from several varieties at the same time in the same machine, it is not to be recommended for beginners. Better use eggs all from the same variety in the same hatching chamber. The fresher the eggs are when set the better. The more uniform in size and shape they are the better. Do not try to crowd the egg trays, get them full, but do not double deck the eggs or stand the eggs on end. If you get anywhere near the rated capacity of eggs into the machine you will have plenty; generally you will fall quite a number of eggs short of that number. There is no advantage in crowding the egg trays, it only makes the eggs harder to turn and results in greater breakage.

Begin turning the eggs the second day of incubation. We like to work the eggs from the ends of the tray toward the center of the machine, and accomplish this by removing the two middle rows and rolling the others toward the center, placing the eggs removed in the vacant spaces left at the ends. We really do not like flopping the trays, using an extra turning tray for the purpose. Turn morning and night. Turn trays end for end in morning and from side to side at night.

Cooling the eggs is something that can be learned only by experience and that depends upon the machine you are operating. It also depends upon the temperature of the incubator

First Golden Campine pullet, Madison Square, 1916. A bird very distinctly barred, legs and toes a perfect leaden-blue, undercolor a perfect slate. Bred and owned by M. R. Jacobus, Ridgefield, N. J.—P. K. W.

room and the season. Nearly every incubator furnishes special directions for cooling. Ordinarily in a cold room the eggs get enough airing at first while being turned. After the first week it is usually a good plan to cool the eggs from five to

window. The hole has felt about the edges and is made to fit the egg, just as a tester fits it. We do not practice turning the eggs on testing day, as we think that they get handling and airing enough when being tested.

We make the first test on the sixth or seventh day, when the embryo can be clearly seen, as a dark movable body surrounded by a spidery network of bloodvessels. Skill in testing only comes with experience. Generally novices had best wait until the fourteenth day when the eggs with live chicks in them are easily distinguished from clear and blood streaked eggs. The clear eggs are the infertiles and the ones with a single irregular blood streak or a mixed watery appearance are the dead germs. Testing is well illustrated in the book "How to Raise Chicks."

We generally make a second test on the seventeenth or eighteenth day, so as to free the machine from all dead or rotten eggs and give the other eggs a better chance to hatch and more room for the new born chicks. We stop turning the eggs as soon as the eggs begin to pip, (when chicks begin to break the shell).

Unless the weather, or the room, is fairly warm we do not let the chicks fall into the nursery below the trays until the hatch is well along toward completion. When the trays begin to fill up with chicks we open up the drop and let the most active ones fall into the nursery.

It is a good plan to close the machine and let it stay closed after the eggs begin to pip. Novices will do best to let the machine alone at hatching time. If you have the lamp clean and burning with flame at proper height, and have had the regulator working properly thru the hatch, you can't help matters much by meddling any at hatching time, and you can do a good deal of harm. Just watch and see that the temperature don't run above 105 or 106 and let the hatch work out its own salvation.

The chicks should stay in the machine until well dried out and good and hungry. This is usually about 36 hours. The hatch generally starts on the 20th day and is all cleaned up by the end of the 21st. If there is delay, you probably have either cooled the eggs too much or run at too low a temperature. Always be sure that you run the machine with an

H. Cecil Sheppard, Berea, Ohio, owner and breeder of the above first S. C. Ancona pullet at Madison Square, 1916, can justly feel proud. This makes his tenth big consecutive win at the Garden.

fifteen minutes once a day, and in hot weather the cooling may be considerably longer. We generally cool eggs a good deal and rely on the feel of the eggs to tell us when they are cooled enough, and that generally is when they feel just warm when touched to cheek or eyelid.

Do not handle or work with the lamp until after you have turned the eggs and returned them to the machine. Don't handle hatching eggs with dirty oily hands. Keep the lamp cleaned and filled; clean and fill it once daily, or oftener if necessary. Keep the wick trimmed and the burner and wick tube bright and clean. Just remember that burning twenty-four hours a day for more than three weeks, is a pretty hard job for any kerosene lamp and that it needs careful attention.

While all manufacturers furnish directions as to temperature, which should be followed, we have found that the following temperatures are about average where we get our best hatches:

Period of Hatch	Temp. of Incubator	*Temp. of Egg
First week.....	102 to 102.5	100 to 101
Second week.....	103 to 103.5	101 to 102.5
Third week.....	103.5 to 104.5	102.5 to 103.5

*Temperature of egg is obtained by having thermometer bulb rest between and just touch the shells of two fertile eggs. There is generally a sudden climb in temperature between the fourteenth and fifteenth days due to movements of the embryo and this must be met by adjustment of the heating device. We don't bother the regulator, but gradually reduce the lamp flame after the second week. Of course, one must be governed somewhat by the weather conditions and must carry enough flame on the lamp to take care of sudden night changes to colder weather.

We like to test eggs either by daylight or by use of an electric lantern. Sunlight or electric light is the easiest light to test by and shows up the egg contents best. With an electric lantern that has no testing attachment, we simply use our hand over the light with an egg between thumb and forefinger, —practically making a tester of our hand. We can work very quickly that way. For a daylight tester we simply darken the room and use a board with a hole in it, placed in a sunny

If this picture was printed in colors, you would see the beautiful lustrous black for which these birds are noted. Just notice how perfectly marked she is. Winner of first R. C. Ancona pullet, Madison Square, 1916. Bred and owned by H. Cecil Sheppard, Berea, O.

accurate, tested thermometer. After hatch is off and chicks are all in the nursery, we generally open the hatching chamber door about the width of a common match and fasten it in that position to afford better ventilation.

The brooder should be waiting all warmed up, ready, regulated and waiting for the chicks when the hatch is off. We like to move the chicks to the brooder in the afternoon, so that they can have their first food and drink and then go to bed under the hover for the night. This plan makes getting them started right a much easier matter.

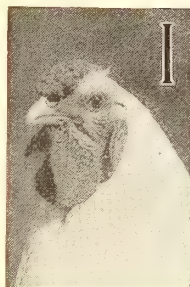

Do not get worried because some eggs don't hatch and quite

a number apparently full sized chicks are found dead in the shell. You get some chicks dead in the shell when you hatch under hens. Possibly if the same lot and number of eggs had been incubated under hens the loss from chicks dead in the shell would have been proportionate. Beginners, because they follow the directions closely, generally have pretty good luck with their first hatches. Sometimes they fall down on later hatches because they trust too much to memory and too little to the printed rules, or because they have grown careless. The moral is: Stick close to the manufacturer's printed instructions for incubator operation.

Practical Pointers for Month of March

Profits in Late Hatched Chicks—Poultry Yard Pests—The Indispensable Disc Harrow—Planting Trees in the Poultry Yard—Handy Stone Boat—"Preparedness" for Parasites.

By Maurice H. Decker

IF ONE COULD KNOW to a certainty just what sort of weather we were going to have this spring, it would be a valuable aid in planning upon what dates to bring forth the largest percentages of hatches. It has been our own experience that the early hatched chicks, those hatched from February to the first of April, are not always the most profitable ones of the season. When we experience the sort of cold, wet, late spring as fell to our lot last year, there are a good many flocks of early chickens that cost

more to rear than they ultimately bring their owners. A chick hatched in February requires a lot of skillful care if it is going to make rapid growth and be as vigorous as one that pips the shell in the more favorable weather of April and May. One has always to reckon with slow growth, higher cost of feed (if artificially brooded) and greater mortality with the early birds, conditions which collectively tend to send the cost of maturing layers or market fowls skyward.

Carolina poplar tree planted in dynamited hole. (See article Practical Pointers for the Month of March.)

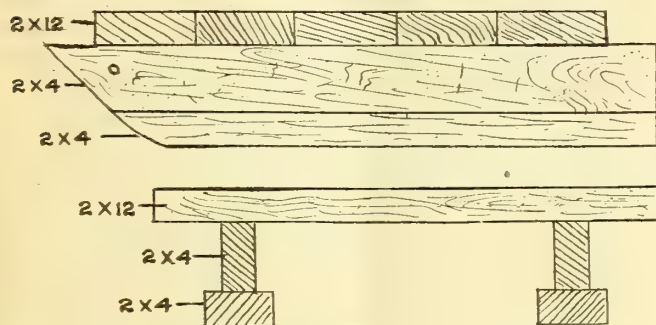

The opinion that a pullet must attain her maturity before cold weather sets in if she is going to make any sort of a showing at all in the production of winter eggs, seems to be pretty well established in the minds of many poultry keepers, but we find this rule to be far from infallible and quite the contrary to be possible. We have had numerous instances when pullets did not come to the six to eight months age necessary for maturity until mid-winter and which promptly responded to good care and feeding by cheerfully shelling out a good percentage of eggs in January and February. It is true these eggs do not bring as high a price as those marketed in the fall and early winter, but they cost us a whole lot less to produce, and it is always the difference in the cost of production and the selling price that determines profit or loss.

To sustain these statements I am going to give the facts and figures of the performance of two of our late hatched flocks of pullets. As these flocks were of different breeds, it will not be possible to put the credit of their showing upon their possessing special favorable characteristics, such as quicker maturity or less susceptibility to weather changes. The first flock, a bunch of forty-four White Leghorns, were hatched on July 10th. They were raised until November first, with very little actual expense, having the run of corn-field, orchard, and potato patch, where they foraged for the fallen grain, fox-tail grass seed, wind-fall fruit and cull potatoes. At this date they were confined to a small open front laying house and fed liberally on corn in the ear, more cull vegetables and milk, cheap feeds upon which they made rapid development. As these fowls had become accustomed to eating new corn while running in the corn-field, we were able to feed them heavily on the fresh husked grain, with none of the usual difficulties that result from its use. This alone saved considerable of the cost of wintering, for dry, old corn was extremely scarce in our locality that year. We always feed quite a lot of new corn every season to our fowls and have found if the grain is not actually musty or heated, which it seldom is when cut when ripe, and set up well in medium sized shocks, that they do very well upon it. To get the birds accustomed to the fresh grain we always have a good sized patch of sweet corn and begin to throw them a few ears of this before they are given the run of the field corn lots. This sweet corn and what fallen ears of the other they find, gets them in shape to digest without trouble the new grain which is given in gradually increasing amounts each day.

Laying rations were started on these Leghorn pullets the first of March and from April until September they layed exceptionally well. During this period they gave a yield of 246½ dozen eggs in all, and by the middle of the month, when the last one had been marketed, we found the flock had given the following account of themselves:

246½ dozen eggs.....	\$58.19
Value of manure.....	6.50
44 hens at 60 cents.....	26.40
Total income	\$91.09
Cost of feed consumed.....	45.20
Profit	\$45.89

We sold these hens when crate fattened at sixty cents each, part going in one lot for a wedding celebration, and the balance to special customers with small families that preferred a market fowl of proportionate size. It is said of the Leghorns that they lay heaviest in the months when eggs are cheapest, and this is usually true, but as these months are the

Drawing showing construction of handy stone boat or sled described in article "Practical Pointers for the Month of March."

ones during which we can maintain a laying flock the cheapest, we find that a reasonable number of extra late hatched Leghorns fit well into the management of our farm, especially when they give us as good a yield of summer eggs as this flock did.

The second flock consisted of eighty Barred Rock and Silver-Laced Wyandotte pullets hatched June 26th, which were originally intended for market fowls only, but after they began to show a steady yield of eggs we kept close record upon their performance in order to see just what profit these heavier fowls would show under the handicap of such a late start in life. They were put in winter quarters September 15th, and by the middle of February were laying an average of 35 eggs a day, and when sold for market or table poultry on the 10th of March, this flock had layed a total of 91 dozen, and showed a profit of \$31.05 over the cost of their keep. The itemized account of this experience is as follows:

91 dozen eggs at an average of 35c.....	\$31.85
80 pullets at 18c per pound.....	79.20
Cost of feed at \$1.00 each.....	\$80.00

Profit\$31.05

I believe the reasons for the failure of so many late hatched flocks are these: First, they are too often regarded by the poultryman as an established source of loss and from the very start are neglected and fail to receive the same good care the earlier birds are accorded. Second, the breeding stock responsible for their being is usually exhausted by their work of laying which probably commenced very early in the season, and they are thus handicapped by nature with a lack of strength and vigor so often astonishing in the chicks hatched from a hen's first laying. Third, there is usually a lack of green food about the ordinary poultry yard in the summer months when these late hatches are due, a contingency the successful raiser must be careful to correct. Fourth and last, but by no means of least importance, if one expects pullets to begin laying at the time they reach their maturity, they must be housed correctly and in such a manner that outside temperatures and conditions have the minimum of effect upon their well-being. And this does not mean a closed "warm" or heated house. Both of the flocks mentioned above were wintered in a Woods' Open Front house, a point to which I attribute the reason for their promptness in laying as soon as the laying rations were commenced. Fowls entering the winter in a partially developed state have all they can do to hold their own if confined to the old style of closed damp building that is stifling and hot upon bright and sunshiny days and damp and dreary when the outside temperature lowers, and poultrymen should not expect them to continue their growth and begin laying when the proper age is reached.

My advice then would be as follows: Do not pin all your hopes to the early hatched fowl. It has its own special value and is necessary upon every successful plant, but does not represent all the profit possible in poultry. Hatch a few late ones from eggs layed by hens unexhausted by heavy production the four months previous, give them all they can eat,

not necessarily expensive foods, house them in fresh air sensible buildings and watch them grow and make money for you.

* * *

Every year we are confronted with the task of cleaning out the "varmints" which somehow or other are just as numerous as ever each spring, no matter how strenuous our efforts of the season past have been. Sparrows, pigeons, red squirrels, crows, weasels, rats and mice, all flock to our farm when warm weather opens up, timing their arrival with miraculous accuracy to the exact day we fix up and fill up the outside grain and mash hoppers. English sparrows appear to be the most common and numerous of the pests the poultryman has to contend with, their forms of annoyance being manifested by their unlimited appetite for cracked grain and chick food, and their tendency to spread and carry parasites. A flock of fifty sparrows will eat daily over a quart of wheat, or its equivalent, and if the hens are fed in the open and the food hoppers placed in accessible positions this regular allowance comes out of the poultryman's profits and foots up to a substantial amount in the course of a season. I have seen farms where I would wager there were nearly a thousand sparrows and probably one-third as many rats, all of which were regular boarders and were waxing fat and prosperous. Prompt work in killing off the sparrows in the early spring will do much toward insuring a freedom of their presence for the rest of the year.

Altho English sparrows are widely distributed as a species, individuals and flocks are to be found upon extremely narrow ranges, each group occupying one locality to which its activities are chiefly confined. Thus if you reduce to a minimum the particular flock that is favoring your premises with its presence, you may be reasonably safe in expecting freedom from their annoyance for a few months to come. Last year we got tired of plugging away at them with the .22 rifle, so we instituted proceedings of a more wholesale nature against them. We put out a few small piles of chick feed, scattering it in a long narrow strip and when the sparrows were thick enough to warrant good results let fly with a 12 gauge, loaded with number 10 shot, shooting parallel to the long dimension of the strip of bait. This worked very well for a while and what few were left we shot individually.

Poplar tree of same age planted in spade dug hole. (See article Practical Pointers for the Month of March.)

If one lives where the use of fire arms is practical the best weapon for dealing with all varieties of poultry yard pests as sparrows, rats, etc., is a single barrel .44 caliber shot gun, which can be purchased for a little under \$5.00. This little gun is very effective upon small animals, a miss is of rare occurrence and a boy or woman can handle it perfectly, being light and possessing no recoil to speak of. Where the use of poison is not restricted the few remaining gun-shy individuals that are left after a shooting campaign can be poisoned by putting a mixture of strychnine and chick food upon the roofs of some of the poultry buildings. The proportions are one-eighth ounce of pulverized strychnine in three-fourths of a gill of hot water to which is added one and one-half teaspoonfuls of starch moistened with a little cold water and then put over the fire and stirred until thick. This is then

inside this pen with you and you will make a clean sweep as you go. The main thing to do if rats are increasing in numbers is to keep all food and grain in rat proof containers. This will discourage the pests as much as any thing. We have been using small galvanized iron water tanks four feet across and two feet high for storing cracked grains and dry mash. These tanks are cheap, will never wear out, hold six to seven barrels of feed and are perfectly rat and mouse proof. Smaller or larger sizes can be obtained at proportionately cheap prices to accommodate any quantity of poultry food and they should easily save their cost in food alone in a couple of seasons. It has been figured that a full grown rat consumes around 75c worth of corn each year and this sum would probably be doubled if he ate commercial hen food instead of the cheaper corn.

There is one implement upon our farm which we find nearly as useful as our incubators and brooders, and which strange to say, we have noticed upon very few of the poultry establishments we have visited. This is a small disc harrow. This tool we find to be invaluable in keeping poultry runs in sanitary shape and in growing sufficient green food to supply all ages of fowls. Among the things it does about our place are the following: It plows up the manure coated yards to a depth of five to six inches, preparing an excellent seed bed for rye, oats, timothy, clover or turnips. The rich ground grows a heavy crop, and after the hens have taken all they wish, the remainder is cut up and mixed in the soil by another round of the harrow. Last year we used it to dig small shallow ditches to drain several low wet places about the buildings and in the yards where surface water collected in sufficient quantity to make things disagreeable, and a couple of rounds on the line where we put in a concrete foundation wall saved about 50 per cent of the labor of excavating the dirt.

* * *

We can work up closer around our colony houses and young fruit trees with the disc than we can with the plow and if it had not been for this implement we could never have kept down the weeds as well as we did last Summer. I never saw such a favorable season for weeds as that was, but the "little old disc" ground them down into the earth in short order. Where one has high close meshed wire fences about his runs, it is impossible to plow up close to them when it is desired to dig up the ground as the double or single trees will catch in the light wires and soon ruin the fence. Now we plow up as close as we safely can and then go in and finish the job with the disc harrow. The disc is invaluable to mix in the annual coating of lime which every intensive poultry farm should receive each year or to work in the bone meal or acid phosphate to help balance the fertilizing properties of the hen manure. Our harrow possesses eight 18-inch blades, cuts a four-foot strip, is easily pulled by two horses and costs us less than \$25. We regard such a tool as indispensable to the poultryman, gardner and fruit grower. Ours has been in use more days in the year than any other farming implement we have, not excepting even the hoe.

* * *

The possibilities of the profits arising from a successful combination of poultry raising and fruit growing is, I believe fully appreciated and in addition, I believe no one questions the superiority of dynamite when properly used for digging holes in which to plant the trees. I hope I will not be considered as trespassing upon Mr. Riggs' department if I submit a couple of photos to show the results we obtained with our Spring plantings of last year. The largest tree was put in a dynamited hole while the smaller one was planted by the commoner method of using a spade. The unusual difference between the two trees was a source of considerable surprise to me, for I had held the opinion that the good results arising from the use of the explosive were of more gradual growth. We planted six trees, all of about the same size, by each method last year and the two shown here are not the extremes of either side, but just good averages. The trees in the spade holes remained dormant for nearly six weeks before they showed a single bud and I thought surely some of them had died. On the other hand the others in the dynamited holes made quick starts and gained their present advantage in the first three months. Our first experience with the good

Sex-control-bred Black Langshan hen given as a prize by Herb E. Sharp for best Langshan article. Article was published in January American Poultry Journal. This was first hen from Spokane, Wash., to attend the Boston, Mass., Show. She was won by J. F. Robinson, of South Weymouth, Mass., and she was awarded first prize in the utility class at Boston. Her record is 22 chickens from 28 eggs, 18 of the chicks pullets and 4 cockerels. Mr. Sharp says she will produce 70% pullets or he will replace her with another hen that will.

poured over one quart of cracked grain and thoroly stirred. We have had best success in ridding our farm of rats by the use of traps. We use the French wire cage traps that catch the animals alive and which are carried by almost every hardware store. These are baited with fried bacon or toasted cheese and placed where rats are in evidence. You will catch more in one night by covering the body of the trap with a little straw, and by leaving one rat in the trap as a decoy. We have never had any success with the rat serums or micro-organisms that are sold for the purpose of exterminating rats. They are very costly, and depreciate in strength with age and warm weather, and altho we have put out considerable of this bacteria we could never notice any decrease in the number of rodents.

Once a year anyway we should all go over our premises and clean them from under woodpiles, brush heaps and colony coops. If you are certain a particular pile of rubbish or trash is harboring a number of rats just put four woven wire panels, such as you use to confine small chicks, about the pile before you start to tear it apart. Then have a good dog

results of using the explosive was obtained when we blew out twenty old apple trees and placed new ones in the same holes. I never saw trees grow as those did, and after that we determined to put out stock, in no other manner.

We found it easy to use the stuff without previous experience and did not suffer the loss of a single pane of glass, altho windows were present in good number all around the scenes of our operations. One 8x8 A-shaped house with glass windows sat within eighteen feet of one large tree that we lifted up with five sticks of dynamite and came thru unscratched. We did not aim to blow these trees out entirely, just lifted them out of the ground a little so the principal roots could be cut and the tree pulled over. Also the noise did not seem to make any difference in the hens laying or our hatching averages.

We certainly had our share of disturbances that year for just about the time we put 1,400 eggs in the incubators in early March, a neighbor took it into his head to blow out a ten-acre patch of nice solid oak stumps, and the way our house shook and rattled, we thought sure there would be few if any chicks on the date they would be due. This blasting was about the most strenuous I have ever seen, as pieces from the big three foot across stumps were blown up nearly out of sight and this only less than a quarter of a mile away. Well, the facts are, that we could see no difference in the averages of these hatches, as we got around our usual 75% results. Does this put a crimp in the time honored theory that thunder destroys the germs in fertile eggs? Lets hear what some of our other poultrymen have to say about this.

* * *

The poultry farm that keeps one or more horses will find the stone boat, or sled, illustrated in the accompanying drawing, a very handy contrivance for moving brooders and small colony houses, for drawing feed out to the various hoppers and for moving potatoes and apples, etc., up to the house or cellar. The combination of the two 2x4s that form the runner eliminate the hardest part of making such an article. It is not necessary to hew logs or limbs into curved runners or to seek natural growths of similar form. The illustration shows how we make the runners out of two pieces of 2x4 timber, bolting one on edge to the other lying flat upon its wide surface. This wide surface of the bottom piece prevents the sled, or boat, from cutting down into the ground and the upper one gives the contrivance height and forms supports upon which to nail the plank floor boards.

* * *

If you will give all colony and fixed houses a good spraying with a mixture of kerosene and crude carbolic acid *now* before you even see any of those devilish little red mites, you stand a very good chance of eliminating 80% of the troubles you might have with them if you let the job go until they make their presence known by hanging in red knots upon the roost poles. When hot weather does set in, they will multiply by leaps and bounds and in all probability you will be too busy with the chicks to notice their presence the minute they begin to constitute a serious menace to your fowls. I try to do as much of my busy work right *now* before it begins, and making away with as many of these pests before they have opportunity to increase is one of my most important "*preparedness*" jobs. Likewise now is an ideal time to put a crimp in the activities of the lice upon the bodies of your hens. If they are few in number (the hens) you cannot do better than treat each with one of the standard lice ointments advertised in this *Journal*. If the flock is too large for individual treatment, a careful cleaning out of the nests, and a renewing of the nesting material and dust baths will accomplish wonders and with little effort upon your part.

* * *

If you can secure good dry one to two year old corn in the ear it will certainly be to your advantage to make your own chick food rather than run any risk with the ready mixed mill brands. I have used nearly every brand of chick food upon the market here, and my experience is that no matter how much care is taken in its preparation sometime or other you are going to run across a bag or two that will be risky stuff to give to your chicks. When we have good

corn as mentioned above, we get it ground along with half as much wheat to about the regular chick size, and then sift the meal out over a 14 mesh to the inch screen. Then we add to this finely cracked mixture, 50% steel cut oats of "B" size which is the same as hulled oats, pin-head oats, etc., and we have as good a chick food as we have every used. We have found that we can buy these oats or oat meal (not rolled oats) from the large catalog grocery houses cheaper than we can get the grade used for feeding poultry from our feed dealer. We prefer to have plenty of good solid corn and plenty of steel cut oats in our chick food and not so much fine grit, millet, cracked peas and "what not," and we can make our own mixture much cheaper than we can buy the ready mixed whose proportions and composition it is not always easy to discover.

First prize Silver Campine pullet at Brooklyn, N. Y.; also winner at the Panama-Pacific Exposition. Owned by Martling Hennerly, Ridgefield, N. J.

Beautiful, Useful, Silver Gray Dorkings

Helpful Advice on Mating Stock and Crowing Chicks, by a
Successsful Veteran Breeder. *By Watson Westfall, Sayre, Pa.*

WE HAVE IN AMERICA today nearly every breed of fowl known. There are all kinds of sizes and colors, yet, with all this, new breeds are being made every year. It is said that in some of the old countries poultrymen will have one certain breed of fowl for years, passing it along from one generation to another. What a rare thing this would be to find with us in America. Here fancy in poultry seems to change about as often as in other things. For example, one while we will be wearing soft hats, loose fitting clothes and broad-toed shoes;

while at another time our fancy will be for derby hats, tight fitting clothes and pointed shoes. This is called style, but it looks more like foolishness. Yet how much of the same disposition is seen with many people keeping poultry. It is not our intention to knock any of the new breeds. We say all honor to the man who can produce something really good *and something really new. But we do think these new breeds should remain in the hands of professionals for a long time before amateurs or novices try to breed them.*

A real professional will be well satisfied to get as little as half a dozen birds to suit him out of as many as fifty, but how about the novice just starting? Will he get discouraged and disgusted and give up the whole thing? How much better to have chosen some old and well established fowl, getting eggs to produce a large percentage of well marked chicks and, naturally, then becoming a real poultryman at once. Take now our own experience, the first fowl we ever bred, with any intention of making it a business, was the Silver Gray Dorking. This was as far back as 1879 and we have kept this one variety of fowl exclusively ever since. Our first attraction for this particular fowl was their beautiful contrast of colors, together with a most unusually attractive form and carriage. We made our start in the Dorking fowl with a setting of eggs from which we produced five pullets and three cockerels. The pullets began laying in December, tho not hatched until June. We were very highly pleased with these chickens from the day they were hatched. Wishing to make some test of their laying qualities, we began a record on the first day of January, 1880, and a faithful count kept for the following eight months showed 700 eggs for these five pullets. Needless to say such a record was very satisfactory indeed to us and settled at once the great question of eggs.

Some years later we kept some records of the growth of some of our chickens, weighing them several times during the season. A little the best record was made with some chicks we had raised on a farm. These were weighed five times as follows:

Month.	—Cockerels—		—Pullets—	
	Pounds.	Ounces.	Pounds.	Ounces.
1st.	1	2½	0	13¾
2nd.	3	0	2	6
3rd.	4	13¾	3	13½
4th.	6	8½	4	12
5th.	8	6½	6	3

If these records have ever been beaten we, in our earnest search, have failed to learn about it.

As table poultry Dorkings are surely superior, this even our severest critics are quite willing to admit. What would we think of trying to eat specimens of most breeds of fowl when five or six years old? As a matter of fact we know that even at this old age the Dorking is still tender and fine eating.

Up to the present time we have used only the hen for incubation. We dust her with some good lice powder three or four times during the time of setting, and then when she is put out with her brood we dust her again. For the chicks we use a mixture of one part carbolic acid with twenty parts of olive oil. This mixture we put on the heads of the chicks as we put them with the mother hen. The simplest and safest way to apply it we have found is with a big wire spike. If there are any of the large gray lice they get on the chicks' heads. This preparation will kill the lice before they have an opportunity to do any damage.

For the first day we have found nothing better than bread crumbs for feeding the chicks. After this we begin with almost any good grain chick food. Of late years we have been thoroly converted to the dry mash method of feeding growing chicks, and we get them started on the mash just as soon as we can, which is generally at from five to six weeks old. Not does the mash grow them larger and better, but it keeps them from foraging so far away from the house. We make our own feed hoppers and we have lots of them, so that there need be no crowding to get the mash. Considerable attention is given the chicks as to how they are resting at night, both before and after they are weaned. We usually take the old hen from her chicks as soon as they have grown their neck feathers, as we find that they do better.

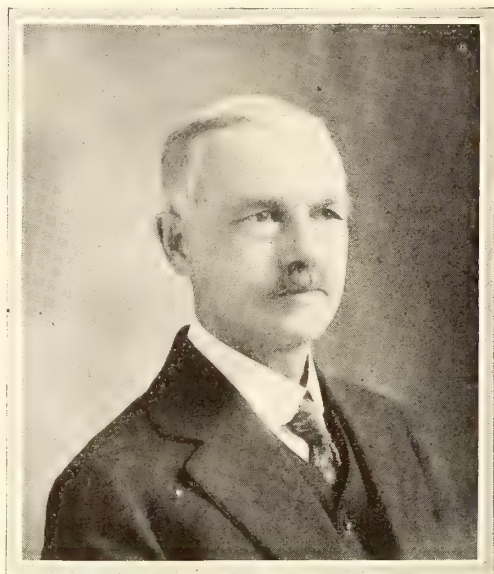

Our coops are box shape, and as soon as hot weather comes we take off the rear bottom board and put slats on so as to let in pure air. After the hen is taken away from them and we have warm nights, if we find them bunching up together, we put a block of wood at the rear end of coop for some of them to get up on. This plan

will carry them along till two or three months old, when they should either have a hole put in the coop or else be put into a larger house. As soon as the chicks are feathered they must have the pure air at night and be able to rest at night without crowding. If a chick has to roost in a bracing, crowding position it is sure to grow up deformed.

The pair of birds in illustrations accompanying this article are shown just as the camera caught them, with no retouching whatever, and we trust that they will give the reader a good idea of the real beauty of form and feather of these interesting fowls. The pullet was hatched about the first of May and the cockerel three weeks later.

Our Standard of Perfection requires nearly all fowls to be full breasted, but how many are really that way? This heavy breast development, so much wanted, comes very naturally with the Dorking, but with most fowls it takes years of time and attention to get even a part of it. The male, being black and white, shows in nearly his natural colors, but the female, having salmon red breast and some delicate shading of color on other parts, does not show quite as natural in a black and white picture.

We have a new 1915 Standard which says the Silver Gray Dorking has a slate under-color which we find true for the female, but seems like a mistake for the male, unless they mean black slate. We find a black base for the white

WATSON WESTFALL, SAYRE, PA.

When we handled this fine pair of Dorkings for Mr. Watson Westfall at the Madison Square Garden Show, we wondered why this grand old breed, which has existed for centuries, has lost some of the popularity it had years ago, as they combine beauty and utility in a high degree. The pair illustrated above were winners at the great New York Show and are as fine specimens of this breed as we have ever handled.—L. A. S.

feathers and a white base for the black feathers, and it appears that the purer and better the surface colors are, the deeper and more distinct the under-colors will be. We have them showing quite a distinct line dividing the two colors, which we expect to show to some extent with feather illustrations.

The production of high-class show birds, such as can win at our best shows of the present day can easily be classed as a science. It is, in fact, a real genuine business which requires plenty of brains, plenty of thought, plenty of patience, and add to all these requirements there also must be a great love for all the work and for the fowls themselves. We do not claim to have the business down to a science, but in our experience of thirty-seven years with Dorkings, we have learned, among other things, how to correct some of the faults commonly seen in these fowls.

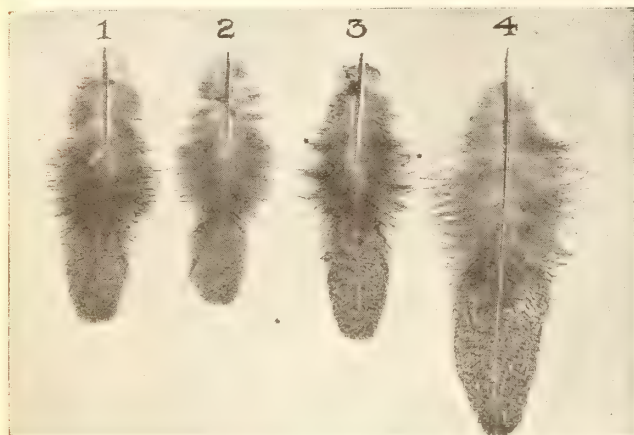

At the beginning we want it known that it does not require a double mating to produce male and female exhibition birds. Back as far as twenty years ago a pure black breast on the male was a rare thing to find, also a clean salmon red breast on the female. We did not know then that both male and female were being bred with too much gray and too little red, and that it would be quite impossible to get good breast color on the males when the females had mealy and mottled breasts. As soon as it was learned that the breast of the female should be a deeper and purer red to produce pure black breasts on the males, an improvement began to be noticeable on these parts. Next came top color of the males for attention, the idea being to get the white parts to show as little black as possible and the black parts to show as little white as possible, making a very distinct and beautiful contrast. After it was learned what an important part the breast color of the female had in producing pure breasted males, it was also learned that certain top color on females would produce the clean white hackle and top color on the males. Again we want to remind the reader that Silver Gray Dorkings do not require a double mating to produce Standard specimens of both sexes. The particular difference with one mating to another is all on the female side, the male always being just as near to Standard requirements

as is possible to get him and this is also true of the female that is intended to produce females. One of the most noticeable differences in these two mentioned females is on the hackle color. An exhibition female will show a clean black stripe on her hackle, while the male-producing female should show just as little striping as possible to get on her hackle. The problem would be easy if the hackle was all, but the real difficulty comes with the color of breast which should be clear salmon red and practically free from mealiness or edging of lighter color. It has always been noticed that the finest marking (stripling) was on the darker gray females with striped hackles, so here again is a difficulty in selecting this much-needed male-producing female. She should be light on the hackle, very clean red on the breast and yet have a finely stippled back and wings. As to her particular shade of gray she need not be of the best silvery color, but her marking should be fine and not at all coarse or shafty.

On the male side there are also many points to be considered. Very little attention has ever been given to under color of the Dorking, but of late years we have been studying it to a considerable extent and find that there is a great advancement to be had from study along this line. We like a male to have good depth to his color. When we open his hackle and back feathers we like to see black base color deep down, not up near the surface, as if trying to peep thru. The same is also true of his breast feathers, the white base there should be deep down. Wing feathers are also to be considered, especially the flights which are so difficult to get perfect. Our Standard says white on the lower web and black on the upper web, but we would just as soon have the flights all black as the safest and best for breeding purposes. Always avoid breeding a male with any all white feathers in the wings and a female with many black or white ticked feathers over her back and wings. Select birds that have long backs that are broad all the way from front to rear and that stand wide apart on short legs.

Dorkings are one of the few fowls having an extra toe on each foot. This fifth toe is, in fact, their trade mark, always identifying them whether alive in one's yards or dead in the markets. It also takes a very prominent part in their

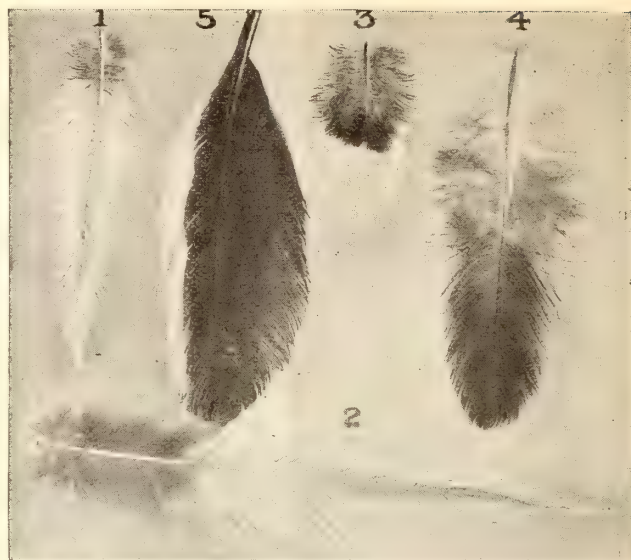

breeding. Old breeders in England have even said that anyone would not go far wrong breeding this fowl if they see to it that their feet and toes are perfect. The fifth toe should not droop down nor even be straight out from the leg. It

Feathers from Dorking females. No. 1 is a very perfect feather taken from back of first New York-Boston pullet, 1915. This feather shows the very fine stippling so much desired. No. 2 is from back of second New York pullet, 1916. It is as fine in marking, but is not entirely free of the shaft line. No. 3 is an even mark feather, but the stippling is quite coarse. No. 4 shows an imperfect feather, the end showing a black tick.

should turn up the leg and also backward.

As we said at the beginning, we have all kinds of fowl with us today, and it should not be a difficult matter for anyone to make a selection. Where just egg production is wanted we have Leghorns, Campines, Hamburgs, etc. Where largest size is wanted we have Brahmas and Cochins, etc. Where a medium between these two extremes is wanted we have Rocks, Wyandottes, Orpingtons, Dorkings, etc. The first group were never intended for table poultry and rarely ever set. The second group were never intended to be prolific layers, but they just love to set and set. The third group combine just the qualities which go to make up a general all-purpose fowl. First, they are good table poultry. Second, they are good layers. Third, they will hatch and rear their

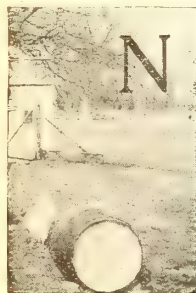

Feathers from Dorking male. No. 1 is from the upper part of neck of second New York cock, 1916. No. 2 is from lower part of the neck. No. 3 is from the wing bow. No. 4 is from the breast. No. 5 is from the wing secondaries. Note how evenly and distinctly the two colors are divided on all these feathers.

young. Fourth, they are very domestic and easily yarded. Fifth, they are all bred in such a variety of colors that one should easily find what they like best. Dorkings are good layers in Winter. Their eggs are large and the general color is pinkish white. They will set at all seasons of the year (have one now on, January 27th) but are never hard to break up. I either put them in with some surplus males or else simply change them to some other yard.

Where the Dorking excels as table poultry is a particular juiciness and tenderness of the flesh and a very considerable excess of breast meat. They also have smaller bones for their size than other fowls. In concluding this article I want to recommend the Dorking as a general purpose fowl combining ideal size, form and color, together with the very greatest amount of usefulness.

The New Standard and Double Mating

Nothing Is More Abnormal Than for An Animal or Bird to Fail to Reproduce Its Own Likeness. Some Varieties Breed Remarkably True, While with Many This Is the Exception Rather Than the Rule. There Is a Reason for This. *By Herb E. Sharp*

NO LESS AN AUTHORITY than Dr. Chas. R. Darwin attempted to divide domestic fowls into two great classes, placing those with normal characteristics, and normal variations, in one class, and those with abnormal characteristics and abnormal variations in the other. He gave up the attempt, saying that it was wholly unsatisfactory.

The American Poultry Association has attempted to divide all domestic fowls into two great classes, placing all the pure bloods in one class, and all the cross bred mongrels in the other, and they have failed dismally.

Now comes a plea for a new Standard that will permit a breeder to follow a single mating system. This is a physical impossibility in handling those breeds that were produced by crossing two or more other breeds.

Let us attempt to divide all domestic fowls into two great classes, placing all the strictly utility breeds in one class and all the strictly fancy breeds in the other. Now we can follow, without difficulty, a single mating system in all the utility breeds, and let those fancy fellows follow their double mating systems to their own logical conclusion.

Nothing is more normal, than for a bird, or animal, to reproduce its own likeness. Thruout all Nature, birds and ani-

mals, are doing just that. Nothing is more abnormal than for an animal, or bird, to fail to reproduce its own likeness, or to produce offspring only slightly resembling the parent form.

If we glance at the Standard-bred flocks we readily see that some varieties, especially the Leghorns, Minorcas, Hamburgs, and some others, breed remarkably true, while in many of the very popular varieties, the individual that closely resembles its parents is not over abundant. There is, and must be, a reason for this condition.

Take a pen of any buff variety, and practically perfect specimens are entitled to, and must be given, the honors in the show room; but the poor beginner that buys them, and hopes to mate them, may be the life of some other fellow's business, but he has a great deal to learn before he becomes a buff breeder. If we are to have buffs, reds, rings, streaks and rainbows we must expect to pay the price these things cost. They cannot breed true by the very nature of their coloring.

Dr. Darwin held the opinion that all our domestic fowls were descended from one common, aboriginal ancestor, the Gallus Bankiva, tho he was by no means certain that this was correct, and he tried to arrange a complete series between the Bankiva, which is our Leghorn, the Dorking, the Polish, the Houdan and the White Sultan, for the purpose of showing the wide range of variations under domestication.

Had he looked into the history of breeds a little way, he

would have found that the Sultan had been domesticated by the Turks, about the time of Christ, that the Leghorn had been domesticated about fifteen hundred years earlier, by the people of Southern India, and that the other breeds in his series were produced by crossing these two old, pure stocks; these old stocks breed true, and so, fall naturally in the normal class, while the cross-bred varieties are continually reverting first to one parent then to the other, and so, fall naturally into the abnormal class.

Dr. Darwin measured the skull of the Cochin and found the brain cavity was nearly twice as large as the Bankiva. He was at a loss to explain this condition, for he examined a sufficiently large number to convince himself that this was a normal condition; he found so many characters common to both that he was certain that there was a relationship between them, still he said that if any bird was ever shown to have had a separate origin, it would probably be the Cochin.

Had he gone into the history of this breed he must have found that it was of Chinese origin, developed in England, and only a slight investigation would have revealed the fact that the Chinese had domesticated the Capercaillie Grouse 2,700 years before Christ, and had developed a breed closely related to our modern Langshans. He was very well aware that fowls of the Bankiva type were introduced into China more than a thousand years before Christ, that this imported stock must have met the Chinese stock along the lines of commerce, mingled, crossed and produced some mongrel stock. Shanghai is at the mouth of the greatest artery of commerce in the Chinese Empire, the Yang tse Kiang River. From Shanghai came the foundation of our Cochin and Brahmas.

We are led to the conclusion that these fowls have been developed from a Langshan-Leghorn cross, or Leghorn-Langshan; the Langshan, by virtue of their power to breed true, must be placed in the class of the normal breeds, while the Cochins, Brahmas, and all their long train of cross-bred progeny must go into the class of abnormal.

Without a single exception all the pure bloods, the normal class, including the Brown Leghorns, can be bred to their highest degree of perfection, for exhibition, or utility, by a single mating system, if the Standard be drawn intelligently.

Now for the third classification, utility and fancy. It has been shown beyond the possibility of question that cross-breeds consume more food than pure bloods do, to accomplish the same results; and if we analyze the reports of the Missouri Laying Contest for the year 1913, under the light of the above classification, we find that the cross-bred abnormal breeds consumed an average of nearly one-third more grain per hen than the pure blood, normal breeds did, and yet they laid on the average a few less eggs than the birds of the normal breeds did. These figures seem to hold regardless of which breeds we compare, or whether the breeds are of the so-called, meat breeds, or of the lighter, egg types. Any breed that consumes a third more grain than is necessary to produce a given number of eggs, or a stated number of pounds of meat, can lay small claim to the attention of the strictly fancy class, by reason of their heavy food consumption.

Here we have the great naturalist's normal and abnormal classes, the breeder's pure blood and mongrel classes, and the farmer's fancy and utility classes, and all breeds taking their places naturally, easily and simply, with just one exception, the little White Sultan, a pure blood, and very normal breed, that lives, not for utilitarian purposes, but solely for his handsome appearance. His mate cannot be induced to lay many eggs, nor is she a patient, or persistent mother; life is too short for anything but fine feathers. She may be the "exception that proves the rule," but if this classification, that seems so natural, is not correct, let some one come forward and point out the error.

All breeds that can be traced back to one original wild parent, without the crossing of two or more lines of blood, are pure bloods. They are normal, and with the exception noted, they are capable of great work from the standpoint of utility; while all the cross-bred types are abnormal and not capable of reasonable work from the utilitarian standpoint.

When a dozen eggs from pure-bred fowls cost 15 cents to produce, a dozen eggs from mongrels will, and do, cost 20

cents; when a pound of meat on a pure blood costs 12 cents to produce, it will and does, cost 16 cents on a mongrel.

The pure blood, normal breeds, can be bred to a reasonable Standard by a system of single mating. Any near perfect female mated to any near perfect male will produce some offspring that are somewhere near the Standard set by the parent stock, the closer the relationship, the better, so long as the stock is good and well cared for.

The cross-bred, abnormal breeds cannot be bred to any Standard by any system of single mating, because they do not reproduce themselves truly. The colors will fade out, run together, or turn to brass. The breeds and colors were produced by crossing, and must be maintained by crossing and more crossing, and this condition has given rise to much that has been said and written against inbreeding, and no doubt has done much to establish the theory that you cannot

First Partridge Rock cock, Madison Square, 1916. A marvel in both type and penciling. Bird Bros., Meyersdale, Pa., owners and breeders of this bird, made a clean sweep of cock class.

mate closely related individuals without causing the stock to "run out."

One simply cannot maintain abnormal, fancy stock, and mate closely related individuals, and yet all live stock breeders know that close inbreeding has frequently produced marked improvements.

Where the stock is right, the blood is pure, and correct attention is given to housing, feed, etc., inbreeding certainly makes for permanent improvement, and where inbreeding can be practiced, a single mating system can be worked out to the entire satisfaction of both the enthusiastic amateur and the veteran breeder.

But where the stock is not right, where the blood is crossed, where the breed is abnormal, and all the laws of Nature are defied, no man can successfully practice inbreeding, and no man can become sufficiently expert, with any system of breeding, either single, double or quadruple, to secure a high percentage of near perfect individuals from the mating of any one pair of fowls; he is extremely successful, who can secure from one pair a few that are good of one sex, and from another pair a few that are good of the other sex.

Possibly that statement is a little strong, and I should qualify it by stating that, up to date, no man has done it.

Our ablest breeders in all the abnormal, fancy breeds, have been, and still are, crossing one group of characters on another group, knowing that the progeny of their matings will not, and cannot reproduce themselves, if mated together, and the Standard has been drawn with this end in view, so that the exhibition specimen shall be the finished product, not the raw material, nor the mill that will produce the finished product.

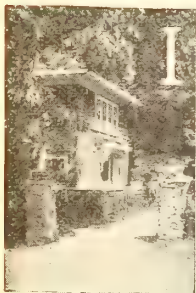

I have seen, and others have too, a breeder exhibit a practically perfect buff color, and after winning, sell the bird for breeding, when the breeder knew that the bird was so light his chicks could never get a notice in any Pumpkinville show. And yet if the Standard called for a darker bird, we would be no better off, for it would require a bird still a shade darker, in the breeding pens to hold the color. I believe this to be true of all the parti-color breeds; and in whites,

a little black is a good thing to have in a breeder. It seems to give a clearer white, if it is not too strong, and so long as this is true we must have the double mating system for the abnormal, fancy breeds. One pen to produce exhibition males and one to produce exhibition females; and so long as we continue to breed these abnormal, fancy varieties we can thank our lucky stars if we do not find ourselves compelled to make two more matings, one to produce breeding males and one to produce breeding females.

As I view the situation the only thing we can do is to continue the double mating Standard or discontinue the abnormal, fancy fowls. Double mating, is our only salvation, let those learn it who will, and can; let all others find out as best they may, what are normal, and what are abnormal; what are pure bloods, and what are not; what are utility, and what are fancy breeds of fowls.

Popularity of the S. C. White Leghorns

First Prize Article, Telling Why They Are a Much Desired Variety—
How to Breed Them for Exhibition and Beauty and Preserve All
Their Valuable Qualities. Winner of the \$50 Cockerel Given by
D. W. Young, Monroe, N. Y.
By Karl Dittmer, Napoleon, Ohio

I HAVE ALWAYS been interested in live stock, and we have kept poultry off and on for twenty years or more. Sometimes they were scrubs and sometimes they were thorobred, but we usually devoted half of our town lot to poultry. However I never contracted the chicken fever from breeding any of them until we tried the Single Comb White Leghorns, when that incurable disease took hold of me—and then I was down hard.

I first bought a setting of eggs from a large egg farm whose ad attracted me, paying the price of \$2.50 for them, and thinking I was making a huge investment. My ignorance may be conjectured from the fact that I took "S. C." to mean South Carolina. Despite this I secured ten chicks from the setting of eggs, and they grew with such rapidity and laid so early that I was entirely enthused. After which I subscribed for poultry magazines, and soon the fancy side took hold.

Ten dollars was then invested in a setting of eggs—but I never told anyone because I knew the people hereabouts would not understand. I secured some fine birds from these, and ever since have been a booster of the S. C. White Leghorn for the show room or for the laying pen.

The S. C. White Leghorn, in her up-to-date form, is to my mind a peerless bird, a combination fowl of utility and beauty, and by all means the biggest proposition in the poultry world today. She represents the surest hope for success to the man looking for a paying bird and the best of satisfaction to the breeder of fancy fowls. These are no idle dreams, and the S. C. White Leghorn men can offer abundant proof of their claims, can back them up, as the cock bird defends his ringing challenge with the cold points of his spurs.

I say that she is an ideal utility fowl—by this is meant one of the greatest possible usefulness. Now this usefulness is universally measured in dollars and cents and the egg has been proved beyond doubt to be the most profitable of the two sides of the utility fowl—the other being meat. Let us consider the latter first, however, for here the Leghorn has been most attacked.

If a man wishes to make money producing market poultry, the Leghorn is not his bird, simply because she does not take on the amount of fat that a larger framed fowl does. There are thousands of poultry raisers all over the country who keep fowls for eggs and meat. They usually find that they need Leghorns for eggs, and that they can get plenty of meat, for if one bird is not enough, they can have two, for one Leghorn can be kept for one-third less than one of the heavier breeds. A pound of meat is a pound of meat, whether on a Leghorn or a Brahma, and I think the quality even better on the smaller bird, and the proportion of bone is

probably less. The only actual difference in favor of the larger breed is the few pounds more meat when sold at the end of the bird's laying life, for in the profits arising from the sale of surplus cockerels the Leghorn is second to none. They will weigh as heavy as the chicks of most larger breeds at two months of age and do it with less expense. The quality of meat and plumpness of carcass are well known and place them in great demand in New York and other large markets. Hence the Leghorn admits no great disadvantage in her size.

In the laying ability of the S. C. White Leghorn lies her

First Single Comb White Leghorn cockerel at Greater Chicago Show, January, 1916, bred and owned by Eugene Smith, 317 Galena Boulevard, Aurora, Illinois.

OUR UNCLE SAM'S POULTRY WORKERS.

The United States Government operates an up-to-now, modern, experimental poultry farm where much good work is being done on behalf of pure bred poultry. The work in Poultry Investigations is not confined to the farm at Beltsville, Maryland, but covers the whole country and is a decidedly worth while work. The men in the photograph are Uncle Sam's workers in the poultry field and their names and titles are: Back row—C. C. Cleveland, poultry club agent for State of South Carolina; A. S. Chapin, poultry club agent for the State of Kentucky; A. H. Russell, scientific assistant in poultry investigations, whose duties are at poultry farm, Beltsville, Md. Middle row—A. R. Lee, animal husbandman in poultry investigations, Washington, D. C.; R. N. Crane, poultry club agent for the State of Tennessee. Front row—Robt. R. Sloum, assistant in poultry investigations, Washington, D. C.; J. W. Kinghorn, junior animal husbandman in poultry investigations; Harry M. Lamon, senior animal husbandman in poultry investigations, Washington, D. C.; A. G. Oliver, poultry club agent for State of North Carolina; N. E. B. Talcott, poultry club agent for State of Virginia; D. J. Taylor, poultry club agent for State of Georgia.

chief claim to the title of the greatest money making fowl in the poultry world. But there are six distinct qualities which should be attributed to her profitableness:

First, unparalleled laying ability.

Second, great prolificacy and hardiness, insuring against loss in hatching and rearing.

Third, small amount of space required per bird, consequently more eggs, because more producers can be kept in a given space.

Fourth, requirement of at least one-third less food, which is a large factor on the expense book.

Fifth, large white eggs which command a premium in nearly all large markets.

Sixth, quick maturity which gives to the Leghorn the credit of two to three dozen eggs before the larger breed begins laying, and which insures a steady yield during the months of highest prices.

Here, then, are some qualities which not another breed of poultry can claim to so high a degree and with such a born right as the S. C. White Leghorn. They are, however, very necessary to a breed that seeks to reach first place as a profit maker. Witness the hundreds of egg farms, of laying contests records, and the number of poultry men of all kinds who prefer this variety. It is safe to say that four-fifths or more of the egg farms thruout the country are stocked with White Leghorns—and there is a reason.

The S. C. White Leghorn has consistently made individual records and an average egg production in the egg laying contests which is beyond comparison. Reference to reports of contests, here and abroad, will show that, in the great majority of cases they have not only won first place, but have stood in greater numbers among the ten leading pens than any other breed or variety. There is good reason for this wonderful egg laying ability. Years ago, breeders recog-

nized the unusual possibilities for high production in the Leghorn and set about to develop them. As a result, they today have the satisfaction of seeing the S. C. White Leghorn far ahead of all others in the field of "bred for egg production."

A most important part of her claim as the ideal fowl, is her beauty. Here again the Leghorn breeder basks in the record of his achievement. The Leghorn of 1870 was a bird with great chunks of meat on the head, a body all angles, and often blocky, and with a pinched, upright tail. Today the S. C. White Leghorn seen in our big shows and even in many obscure small shows, is a thing of beauty—an artistic creation. She is the incarnation of grace, symmetry and beauty. She offers the combination of the purity of feather, the beauty of form, and the poise of bearing which is demanded from an artistic and fancy viewpoint. Thousands of professionals and amateurs have adopted her. No hotter competition occurs than at the shows in White Leghorn alley—which shows that she is widely bred to the Standard. Count the breeds represented in the display advertisements of the poultry journals and you will find more Leghorns there than any other variety, and fanciers use the bulk of this space.

A well defined system of breeding is the surest way of building up a flock of general merit. This calls for a knowledge of blood lines and of line breeding; records of every chick hatched and grown, and of the performance of adult fowls in the laying and breeding pens. Wry tails, crooked breast bones, and brassy plumage are often the result of incorrect methods of care and handling, so that proper rearing plays an important part in producing good birds.

All points should be given due consideration in breeding, and none neglected. I look for type first, since that makes the breed, and gives especially to the Leghorn, both her

utility and her beauty. Aside from the fact that any slight defect in type is more readily detected in the female, it is generally agreed that she has more to do with transmitting type than the male, while the latter is depended on for color. I have used females with erect combs to get good combed males, but now I select a hen with a firm comb and no weakness in the lop, as this secures good combs in both sexes.

A mating in which both sexes are close to Standard requirements will, I believe, give best results, if followed when selecting birds for the breeding pen. I like a neat, medium sized comb on the male. A female rather heavily feathered

on back, with a good suggestion of cushion and strong coverts, is usually an excellent breeder of cockerels with good tails. A male having a well-spread tail will often give pullets with the objectionable pinch of tail absent. Where so large a percentage of the birds run close to Standard, as they do in this variety—if Standard points are followed in making selections, then the chief essential aside from this is to select specimens possessing good sound constitutional vigor.

I believe that the S. C. White Leghorn is ideal as a utility and beautiful fowl, and, that as she has a big present and has had a thoroly tested past, she has a bigger future.

S. C. White Leghorns—A Desirable Breed

There Is No Breed That Will Give Better Results Under Right Conditions Than the World's Popular Favorite, the Little White Leghorn Hen. *By George R. Williams, St. John's, Newfoundland*

LIVING AS I DO in the City of St. John's, about 60 miles distant from the famous lighthouse at Cape Race, in the Island of Newfoundland—Britain's oldest colony—I cannot resist the opportunity of writing an article (which I hope will be accepted) in order to let our American cousins know how very much we Newfoundlanders prize and appreciate the great qualities of the world's famous egg producers, the Single Comb White Leghorns.

I will give you the history of our personal interest in the breed. I am a busy insurance man engaged all day at the office and having purchased a residence in the city suburbs with a good-sized lot, my wife and I decided to keep some thorobred poultry for pleasure and urofit. First, we decided to visit and see the various breeds at the exhibition of the Newfoundland Poultry Association, and make inquiries from exhibitors and see

the specimens in their best feather. We then and there admired the beauty, and the well set-up appearance of the White Leghorn as compared with all the others—their grand white plumage, intensely red combs, yellow legs and beak, their vitality and alertness—all proving their attractiveness. The exhibitors all testified to their good points, and after keeping them now for years, we can speak with our friends and eulogize them as the best breed of fowl for the following reasons:

First, they lay more eggs than the average breeds, as proved by the tested laying competitions in various parts of the world.

Second, they do not become broody and so unproductive.

Third, their eggs are always strongly fertile in the early Spring—an urgent necessity when early pullets must be had for the egg supply at a time when the hens are moulting.

Fourth, the fine flavor of flesh which the White Leghorn possesses and which is a feature peculiar to the breed. The cockerels make delicious broilers.

Fifth, the hardness of the breed for the rigors of a Northern climate, such as we have in Newfoundland, where the lilac blooms in July and August is the month of roses.

Sixth, the Winter laying abilities of the pullets in the healthy open-front houses, when the birds will lay regularly during the coldest season, and where the snow lies piled around the poultry house two to four feet deep, at a time when eggs of other breeds are scarce, and the egg market is at its top notch.

Seventh, the snowy white shell of the egg and the superior flavor of the contents—our Leghorn pullets are now laying large size eggs weighing 24 ounces to the dozen.

Eighth, the quick maturing nature of the breed, the pullets often laying at five months old.

Ninth, the smaller amount of food required for the greater results as compared with the heavier types.

We have proved the above facts with our own White Leghorns and can heartily join with others in saying: "You cannot beat the Little Leghorn Hen."

When we commenced to keep the Leghorns we knew nothing of the scientific side of keeping fowl. We began by importing a cheap pen of White Leghorns from Prince Edward Island, Canada, as foundation stock, not being as well informed then as we are now. In order to compare our birds with those of others, we decided to send them to the annual poultry show and take notes. Judge Landry, of Truro, Nova Scotia, who kindly visited our island awarded us third prize for hen, and thus being encouraged we aimed for higher results. Needless to say the name of "D. W. Young" and "White Leghorns" are now even household words in far-off Newfoundland, where Mr. Young's reputation is well known for having the best White Leghorn blood. We wrote a New York friend to secure a setting of Mr. Young's best eggs, but owing to long delays in the mails and the season getting late we had to abandon the idea. We then made local inquiries and succeeded in buying a "White Leghorn Cock" imported from D. W. Young the previous season, and to which we immediately gave the name of "D. W.

First prize White Plymouth Rock cock at the Greater Chicago Show, January 1916. Owned by P. J. Olle, Route 4, Racine, Wis.

Young" as a distinguishing characteristic. This cock bird was not of the exhibition type by any means, and was only an ordinary looking bird, but he had the goods—the D. W. Young blood—which he proved in his cockerels and pullets when they carried off the silver cup donated by Sir Walter Davidson, the governor of the Island of Newfoundland, for the best display of locally bred "White Leghorns."

Needless to say we were very proud of our achievement in the hardest and biggest competitive class in the show. The following year we repeated the trick, using the same good stock, winning the cup a second time. This cup so far has always been won at the Newfoundland Show by breeders using in their breeding pens stock from D. W. Young.

Our birds are prepared for the show by beginning with the mating pens, selecting the best types and unrelated males as far as possible, hatching out early chicks in the incubator, feeding properly, giving the growing chicks special attention. In this work my wife practically has the entire care. A month before the show we select the "Liklies," coop them and train them as far as time allows, some do not get any special attention whatsoever, and the night or two before the show my wife and I wash the birds as recommended, by using three washing tubs of water. In the first we use warm water and plenty of white soap and borax, the second tub contains tepid water only, and this is where the soap is washed out of the feathers, whilst the third contains blue water. The birds are wiped with towels, and this is where all the family assist in the job, wiping the feathers all one way carefully, from the head toward the tail. A little vaseline on the combs and

legs completes their toilet. We have a big fire going in the kitchen range and the birds dry out during the night in their boxes containing planer shavings. It's a lot of work when you have to do it yourselves, but a real source of genuine pleasure, and after all, it's well worth while, when we go to the show room and hear our competitors and friends all extending congratulations and patting us on the back!

Besides the great pleasure the birds give us, they more than pay for their keep, as our accurately kept accounts prove. We sell our eggs direct to the customer at 60 cents per dozen from December 1st to March 17th, and 40 cents the rest of the year. Broilers realize 30 cents per pound, and we kill the two-year-olds, which realize 25 cents per pound. For settings of eggs we get \$2.50 for 15, and breeding cockerels \$2.50 each. In Newfoundland we pay \$20 for 2,000 pounds of straw used as litter, No. 3 wheat costs \$2.60 per 100 pounds, oats 85 cents per 38 pounds, bran, \$1.60 per 100 pounds, and scratch grains \$2.50 per 100 pounds. Oyster shell and grit sells at \$1.50 per 100 pounds, yellow corn at \$2.30 per 100 pounds. When poultry men pay these prices to feed Single Comb White Leghorns, they must get the financial returns. Our birds paid us a good profit last year, altho our feed bill was nearly \$300, but to be successful with the poultry, take our advice, even from far off Newfoundland, start right by buying stock or eggs from a recognized breeder of the breed, treat the birds with kindness, study their needs, and I am sure there is no other breed that will give you better returns than the world's popular favorite—the Little White Leghorn Hen.

A Study of General Purpose Breeding

Health Is the Fundamental Requirement for Successful Poultry Keeping, Since All Other Considerations Rest Upon It.

By Maurice H. Decker, La Porte, Ind.

HERE ARE IN THE MAIN, two things which stimulate the domestic hen to an increase in her production of meat and eggs. These are first good care which includes agreeable surroundings and second, the hereditary influences of good breeding present in her make-up. Methods and formulas for the feeding and care of fowls have probably reached the zenith of their development as far as practical results demand, but the science of special purpose breeding, the development of strains of fowls for maximum

yields and performances in special lines present a new and inexhaustible field for the poultry breeder.

I believe the most profit in poultry in the future will go to the man who bears this point in mind. The day of the "shift as shift can" and "root hog or die" farm flock is firmly on the decline and taking its place we find the uniform clean cut flock of fowls bred for profitable production in some special branch of the poultry industry.

The domestic hen possesses two traits which hold forth promise of certain success to the careful breeder—extreme prolificacy, and a ready adaptability to environment, and better results are noted almost immediately when special mating for improvement begins.

There are six general lines along which fowls may be bred for improvement and increased profits by the farmer and professional poultryman. These are:

1. Better health.
2. Quick maturity and full regular size.
3. More and larger eggs.
4. Better fertility and hatching averages.
5. Longevity with continued profitable production.
6. Prize winning form and feathers.

I regard health as the fundamental requirement for success with poultry. It is the keynote which sounds the success or failure of all endeavors in the remaining special lines of breeding, for without strong, sound constitutions, it is impossible to produce quick maturing, heavy layers, longer lived and

prize winning fowls or secure strongly fertile, hatchable eggs. Breeding for health is probably the least difficult to begin and pursue. Its successful attainment is hinged upon two inviolate rules for procedure. These are, to never allow in the breeding flock a fowl which has at any period of its life suffered from any disorder and to do the best possible to insure present and future health by the liberal use of fresh air, wholesome food and sanitary surroundings. Close watch should be kept on all fowls liable at some time to be used as breeders, beginning the day hatched and the instant one loses even the least part of its good health or vigor, it should be marked accurately as an undesirable. For this purpose we use celluloid leg bands which slip on easily after the manner of a key ring. They are colored red as a warning signal against using the wearer to reproduce its kind and by having three sizes, baby chick, Leghorn and Plymouth Rock on hand we are able to fit any size of growing or mature fowl.

The elimination of roup from our flock of Plymouth Rocks by four years of careful selection and breeding I regard as our most important achievement in the line of special purpose breeding. Before attempting this course as the only permanent remedy, it appeared as tho our fowls were fairly saturated with the germs of this discouraging disease, awaiting only a favorable opportunity for breaking out. Commencing with the first cold wet spell of Fall we were doctoring and dopping some of our birds continually until the warm weather of Summer set in for good.

Working upon the principle that a tendency toward this or any serious disorder can be transmitted from parent to offspring as surely as a tendency toward heavy laying, we carefully culled down our flock of breeders, removing those individuals most subject to the disease. A marked improvement was noted as the result of this culling. Fewer of the young stock contracted the disease in Fall and early Winter and the following Spring we were able to reserve for our breeding pens a sufficient number of pullets that had never been even touched by the roup. At present this disorder is of very rare occurrence among our fowls and I am positive a continuance of our policy of selection breeding will insure their immunity in the future.

Breeders of market poultry should make special efforts to

develop strains of fowls which quickly mature to full even size. Even uniform chickens always bring higher prices, dressed or alive, and there is much time and food saved when

Second prize Columbian Wyandotte cockerel at the Greater Chicago Show, January, 1916. Owned by Leo. A. Lee, 5626 Wilson Avenue, Chicago, Ill.

developing a flock of broilers or roasters by having them all reach about the desired weight in a uniform period of time. A short time ago, while interviewing a large breeder of Plymouth Rocks, Rhode Island Reds and Orpingtons, I received an account of his experience in selective breeding, which so clearly illustrates what may be accomplished along this line, that I give it here:

Said he,—“Until I devoted special efforts to develop strains of fowls capable of producing regular even broilers in a uniform period of time I had serious difficulty in filling broiling orders from large consumers with satisfaction. For example, a banquet is to be held at a certain restaurant which is in the habit of buying my table poultry. The manager telephones out to the farm and orders say two hundred two-pound broilers. Now it was formerly well nigh impossible for me to furnish two hundred youngsters weighing even fairly close to two pounds each, but being after the business I would promise to fill the order. Of course, some of the lot I would send would be oversize and some undersize. The restaurant manager knows his customers will be better pleased if each is served a uniform portion, so my goods create an unfavorable impression upon their arrival. And if by chance one patron receives a very small bird and his neighbor is served an extra large one, there is liable to be petty dissatisfaction which if repeated to the management, is fired back to me with interest.

“It didn’t take many incidents of this nature to set me to thinking that special efforts on my part to develop my strains with a view to producing more uniform and regular crops of market chickens would pay me well, not only in giving better satisfaction with large sales but in the labor and feed subsequently saved.

“Accordingly that season all of my pullets were kept under close observation and not a one which did not weigh over 24 ounces at ten weeks of age was allowed to enter the breeding pens when matured. The next year the limit was raised to

26 ounces and the next 28. Now I have no difficulty whatever in filling my pens with desirable females who tipped the scales at 30 ounces in two and a half months and the prospects are very favorable to my being able to show up the limit another two ounces next year. Not only are the pullets carefully selected, but all males are graded as well. I mate my stock for producing market poultry in flocks containing one hundred females and five to six males and to further even results I use in each pen only cockerels who have made uniform growth together.

“The result is my broilers and fryers are setting new records each season for even, regular growth, mature in shorter periods of time than formerly, saving me considerable expense in grain and labor and my large customers are well satisfied with the goods I deliver. The past season the number of runts and extreme underweight ten weeks old birds among the 6,500 I reared, was a trifle less than 4%, which I consider a very creditable showing for my five years of selective breeding. Another point is, I find I have considerable less mortality in my young stock which represents another substantial saving in my business. A quick maturing pullet must be of a strong, vigorous constitution, with well developed digesting and assimilating faculties, and these are the only sort I find it pays to allow to reproduce their kind.”

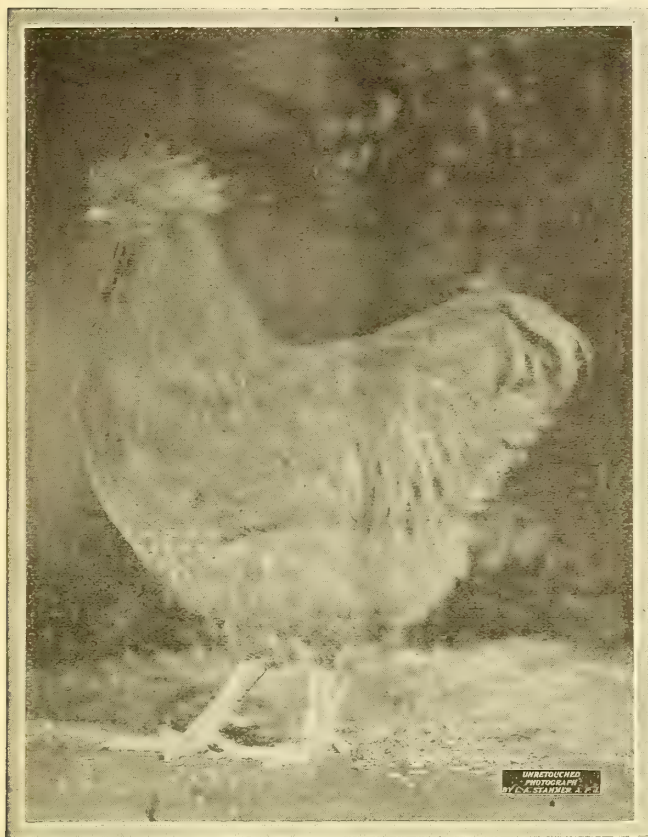

Of vital importance to every class of poultry raiser is the question of getting more eggs per year per hen. The items of labor, depreciation, interest charges and to some extent, that of food remaining the same whether a hen lays fifty or one hundred and fifty eggs per year, it becomes apparent that the most logical method of increasing poultry profits is to increase the yields per unit rather than developing plans for maintaining a larger number of fowls. With grains at the present prices, it is going to take around the value of ten dozen eggs at the ordinary market prices to maintain one hen a year and with the average yearly production of hens in the United States fixed at six dozen, only those poultrymen who have made special efforts to increase prolificity will be able to make their fowls pay. The excellent records accomplished in the laying contests of this and foreign countries clearly illustrate what may be done in the line of breed-

ing for eggs and establish records which every poultryman should strive to imitate.

Here again the ancient rule of "like produces like" should

Unretouched picture of first prize Buff Orpington cock at the late Madison Square Garden Show. Owned by Sunswick Poultry Farm, South Plainfield, N. J.

be followed and never lost sight of for an instant. The first step is to install a sufficient number of trap-nests to accommodate the fowls and promptly spot and make away with the indifferent layers before they have an opportunity to perpetuate their characteristics. In most flocks of uncultured hens will be found individuals that lay but a very few eggs a year and occasionally one that never lays. These must be removed from the flock at once, for the additional reason that they lower the average egg record of the better layers. I have known a number of instances where the weeding out of a small percentage of drones have changed flocks kept at a loss to profit makers.

Next the performance of the better layers should be closely followed and at the end of the year those that it is judged have paid their way retained for breeders. It is not absolutely necessary to use the trap-nest the year round to get in touch with a layer's desirability. It will be usually found that the heavy layers are the early layers and pullets that perform well during the months of September, October and November generally make desirable breeders. When a flock of above the average layers are selected they should be mated to the best cockerel of heavy laying breeding it is practical to secure. Poultrymen who give this plan a trial will not lack encouragement in the shape of early indications of improvement. As evidence of this, I give the results of our first three years breeding for better egg yields. We started with a flock of 46 hens, having an average yield of 124 eggs each in their pullet year, no individual with a record of less than 120. A selected flock of 60 pullets from these hens averaged 146 eggs their first year, an increase of 14%, and pullets from this selection made an average of 165, a 13% improvement. These were selected pens, remember, and were bred each year to cockerels from hens of unquestionable worth as prolific layers. From that date on our gains in average egg yields have been smaller, but steady, and at present we breed only from hens possessing a record of 180 eggs and over their first year.

We are not attempting to produce any individual layers of sensational records, just striving to establish a large commercial flock of above the average profitable performers.

I believe it very probable that the near future will bring regulations to govern the minimum weight of eggs when sold by the dozen. It certainly does not seem consistent that eggs weighing 18 to 20 ounces a dozen from scrub hens should realize the same price as heavy 24 to 26 ounce per dozen eggs laid by selected pure bred fowls.

There are two profitable reasons why the poultry keeper should begin immediate steps to increase the average size and weight of the eggs laid by the fowls. First, when regulations pertaining to the selling of eggs with reference to weight do come into effect he will be in on the ground floor, comparatively speaking, and in a position to reap the profits due the producer of large size eggs. Second, as a producer of a high class product he will gain under the present system of marketing by being in a preferred position to compete for the more select remunerative egg trade.

Breeding for larger eggs requires the exclusive use as breeders of both male and female descendants of hens who have been steady producers of heavy normal shaped eggs, supplemented with the best of care in the particular of food embracing both quantity and variety which will enable them to accomplish the best that their selective breeding encourages.

Particular care in determining the individual ability of each breeder to lay fertile eggs that hatch well is another line of development capable of returning profitable results to every poultryman. Our trap-nests have taught us that occasionally there will be an extra good layer of healthful appearance laying infertile eggs or eggs that hatch badly. One of the few extra good laying White Plymouth hens we have ever bred laid perfectly infertile eggs, while two other of very good performance were detected last Spring in laying eggs of which less than one-third hatched and this in spite of all three being shifted from pen to pen containing different cockerels. Eggs from hens that lay poor hatching eggs cannot hatch into chicks capable of developing into valuable breeders and there appears to be no reason why the elimina-

tion of such hens each year will not only increase the fertility and hatching averages of the flock but do away with the losses resulting from attempts to hatch poor eggs.

When trap-nests are in use each bird should be banded with a leg band bearing her individual number, which number should be penciled on every egg she lays. Thus it is a simple matter to follow up her product until hatched, accurately recording fertility and hatching averages. If it is thought desirable to keep further tab, the chicks may be toe-marked or banded with chick bands and followed up until grown. Altho such a course means work and trouble, it is the right one for the beginner to pursue. By starting with a few choice birds and carefully following up and improving their increase each year he can develop a small flock of exceptional quality and worth, tho only devoting a portion of his time to the task. Then when he is satisfied he possesses

First prize White Wyandotte cockerel at Ohio State Fair, 1915. Owned and exhibited by H. J. Riley, Box A, Bryan, Ohio.

a first-class paying strain he can begin hatching wholesale and in a short time expand his foundation stock to a flock sufficiently large to stock an egg or broiler farm all of the original quality.

The first point in the list of special purpose breeding lines is one, I believe, too few poultry raisers appreciate or consider. So many are taking it for granted that pullets are the only class of fowls profitable to keep for layers, the fact that it is possible to breed a strain of fowls which will suffer little mortality in their second and third years and produce sufficient market eggs to show a profit over their cost of maintenance is largely overlooked. The advantages of being able to retain yearlings and two-year-olds as layers are several. First it costs somewhat less to "summer" a hen than it does to raise a pullet to laying age, and considerable less labor and capital tied up in hatching and brooding appliances are required. It generally costs about sixty cents to mature a pullet, while we have repeatedly carried hens over the few months between their laying periods for as little as thirty-five cents each. Summer and early Fall eggs are produced principally by hens and not pullets, a fact to be remembered by poultrymen possessing year-round demands for fresh eggs. And again, hens suffer less from colds and kindred ailments in early Winter

and having passed thru one season of laying are less liable to suffer from disorders of the egg organs. Losses from "egg bound" pullets are always to be reckoned with on commercial farms where large flocks are being forced for egg production.

I have in mind a case, where the retention of hens until their third year, is making money and saving considerable labor and trouble for a small poultry man a short distance from our farm, which he visits frequently to swap experiences. He has unwittingly followed this branch of special purpose breeding by hatching eggs only from vigorous Leghorn hens in their third year, the pullets and yearlings being used to fill the laying houses. He hatches but a few chicks each season, less than half the number that would be required if pullets only were utilized as layers, and tells me he clears nearly as much per year from the hens, in fact more if the trouble of extra hatching and brooding is figured in. Another White Leghorn breeder from a Southern state writes that he clears \$1.20 from pullets, \$1.00 from yearlings and \$0.90 from two-year-olds. Another point of superiority of the hens is the larger size and uniformity of the eggs they lay. A pullet's first dozen are generally undersize and during their whole first year there are liable to be a number of cull eggs. Healthy vigorous hens may be kept as breeders up to their fourth year with profit, especially if they hold heavy laying records as pullets. I know of a farm in northern Illinois which makes a specialty of heavy laying strains whose heavy yielding hens are kept for breeders until they die. The manager tells me that if he gets but half a dozen chicks a season from his oldest best layers he considers they are paying their way handsomely.

Breeding purposely for prize-winning fowls of show quality is the oldest and most practiced form of special purpose breeding. This is an art requiring considerable skill in choosing one's breeders, in supplying an equal balance of good and undesirable points on each side of each mating by selecting a male possessing sufficient strength in certain points to balance a weakness of those same points in the female and vice versa. All of which is mastered only by experience and experiments. There are two methods by which show birds may be reared. The first is the way of the specialist, who, possessing a thorough understanding of his particular breed or breeds, is able to accurately determine in advance the results produced by a certain mating; who hatches and rears his fowls in small flocks and keeps an eye on surroundings and care which may influence the color or shape of his stock. As examples, yellow corn and beef scrap are generally regarded as producing a yellow tinge in white plumage and sun and rain impair the tint of the buff varieties. Second, the course often pursued by large plants who do a combined utility and fancy business which is to hatch large numbers of pure bred chicks and later pick the cream to develop into ribbon winners.

There are four aids to the man who is breeding with a special purpose in view. These are the trap-nest, scales, record sheet and a trained eye. The first three can be easily employed at once by even the novice, and the fourth may be acquired with a little practice of the others. Decide upon a definite ideal, breed only from individuals approaching it closely, use with each mating good healthy males bred along the same line, use good judgment in the matters of food, care and sanitation—there you have special purpose breeding in a nutshell.

Organized poultrymen of New Jersey, 4,000 strong, have launched a campaign for new and further legislation against the misbranding of cold-storage poultry products. While recognizing the value of the storage houses in handling perishable provisions, the New Jersey poultrymen object to having the storage eggs sold under "fresh" labels in competition with the really fresh product. It not only hurts the legitimate business, but the consumer is swindled.

Several months ago the board of regents created a poultry department to be added to the Nebraska Agricultural College at Lincoln, but nothing further has been done, because, so they claim, they have been unable to find the right kind of a man to take the position of professor of poultry husbandry. Nebraska poultrymen are getting anxious that the department be installed at an early date and have recently sent the regents a petition asking that prompt action be taken.

OUR GUARANTEE.

We guarantee our subscribers against
loss due to fraudulent misrepresentation in
any display advertisement appearing in the
American Poultry Journal, providing the
subscriber when ordering the fowls or mer-
chandise states that the advertisement was
seen in the American Poultry Journal, and
places the order during the month or
months in which the ad is inserted in our
columns and notifies us of the fraudulent
misrepresentation of the advertiser, giving
full particulars, as soon as it occurs.

Look at the address on your wrapper.
See that it is absolutely correct and notify
us of any mistake, no matter how slight.
Note the expiration date which appears
thereon, and renew your subscription be-
fore the expiration date.

If you change your address give both
your old and new address as well as your
subscription number when notifying us of
the change.

AMERICAN POULTRY JOURNAL is
the oldest poultry paper in America. It has
a national and world-wide reputation. The
best writers on poultry matters contribute
to its columns. It receives the patronage
and endorsement of the foremost repre-
sentative breeders of standard poultry and
manufacturers of poultry appliances in the
country.

WITH THE MAJORITY of our readers
this is the baby chick season, the time
of hatching and rearing. Eggs for
hatching and day-old chicks are sell-
ing well and at reasonable values,
quality considered. Since the farmers'
great crops of grain have been turned
over to the elevators and distributors,
the prices of grains have advanced

sharply, speculators are trying to "bull" the mar-
ket, we are told that a very large part of the oat
crop and wheat crop was spoiled by the wet season,
that much of the corn is soft and that good sound
grain will command high prices on account of de-
mand for export.

Altho we were promised lower prices on feeding
grains, by those optimistic about "bumper crops,"
we are not likely to experience lower prices for some
time to come and there is a great deal of poor feed-
ing grain on the market. The season is approach-
ing when grain spoils quickly, and, even tho an ad-
vance in price may be looked for, we do not believe
it is wise to buy feeds in large quantities. To suc-
ceed in growing poultry it is necessary to use good
sound grain and, even tho prices may be high, it is
better to buy small lots and insist on good quality.
Poor or spoiled grain is not cheap at any price.

The prices paid for poultry and eggs have ranged
rather lower than usual, but many growers are
looking forward to a sharp advance in selling prices
of poultry and better prices for eggs. A great many
poultry keepers, during the winter just past, have
sold out their flocks to below the average size for
the season; some have cut down the number of fowls

to a very considerable extent. Within a few weeks
the demand for fowls has increased and prices of-
fered by buyers have improved considerably. 1916
ought to prove a good year for poultry growers
who are working to produce more eggs and better
poultry. In our locality a good many producers are
marketing direct, and more will do so,—in this way
eliminating the middlemen who, as distributors,
used to gobble nearly all the profits.

It ought to be a good year for those who grow
good chickens. Make it a rule to grow only as many
chickens as you can care for properly. A small flock
well cared for and brought to the highest degree
of excellence will pay far better than larger flocks
indifferently cared for and of inferior quality. Strive
to produce the best. It is better to have a few hun-
dred good ones than a thousand or more scrubs.

March chickens should produce cockerels that will
sell at good prices in the summer months and pullets
that will lay next fall and winter when eggs are
high in price. They will do well if you feed and
care for them as you should. And your success will
be measured by the amount of enthusiasm and in-
telligent work you put into growing the chickens.
Little details must be carefully attended to. Chick
rearing is a simple matter if you go about it right.
It is not a pleasing occupation if it is done wrong.
Every poultry keeper who intends to rear chicks this
season should read and study Dr. Woods' book
"How to Raise Chicks," published by this Journal
and obtainable in neat cloth binding at 75 cents per
copy, postpaid. Our book department is busy fill-
ing orders for this book and would like to include
yours.

THE MUCH HERALDED American Poultry Association text book for use in the public schools, entitled "Twenty Lessons on Poultry," by C. T. Patterson, and edited by Frank E. Hering, is now ready for distribution. On the whole it is a very creditable elementary text book on poultry and the best effort in the publishing line that the American

Poultry Association has accomplished to date.

The text is presented in such a manner that it is certain to interest the public school pupil and it will undoubtedly help to create a greater interest in Standard-bred poultry, as well as prove of assistance in teaching the elements of poultry culture.

The book is published with an attractive cloth binding, the type is clear and most of the illustrations are reproduced from the Standard, with a few original photographs added. While there are some minor points in information, like the teaching that lice suck the blood of fowls—altho we know that poultry lice have biting mouth parts and are not supplied with sucking equipment—and a few other matters that the author will find that the authorities do not concur in, it is a very good text book for the purpose for which it is intended and a credit to the American Poultry Association. As a whole the illustrations are well presented, altho by unfortunate error of the types the Buff Leghorn title got under the White Leghorn picture and vice versa. Beginners in poultry will certainly find this book useful and there are suggestions contained therein that might well be heeded by poultry keepers who are far from being beginners. The book is printed on good paper, contains 92 pages and 56 illustrations.

ENGLISH POULTRY and English poultry keepers are playing a very important part in the big European war. Eggs are necessary food for the sick and wounded soldiers. The hospitals in France and England stand in great need of a constant supply of new-laid eggs. Many millions of eggs have been shipped from America to the front, sold

thru regular market channels, but these could scarcely be considered new-laid eggs. It is not possible at this time to obtain an accurate statement of the number of eggs required by war hospitals, but it is an interesting fact that *Poultry*, an English weekly, is endeavoring to secure donations, thru an egg collecting system, of seven hundred thousand new-laid eggs weekly for the wounded soldiers and sailors. English poultry keepers have responded nobly and on January 7, 1916, it was reported that new-laid eggs, freely given for the cause, amounted to a total of 10,915,049 dispatched to base hospitals in France and 1,966,663 sent direct to English hospitals. In addition English poultry keepers had contributed to the egg fund in cash £6,432 17s 10½d. That is evidence of practical and life-saving patriotism on the part of English poultry keepers.

A correspondent asks the Editor of *Poultry*, "Are poultry farmers exempted from military service, and if so, on what ground?" To which the editor replies: "I certainly hold that a person producing eggs and poultry is helping to keep up the food supply of the country, and doing thereby excellent war service. The Board of Agriculture since the outbreak of the war has been untiring in its efforts to

persuade poultry keepers to stock "more and better poultry," but so far the Board has not supported poultry farmers in the direction our correspondent mentions."

The same editor comments on an article, "Mobilize the Women," on this subject in this wise:

"As the removal of so many men may mean a serious difference to the food supply of the nation, the author is of opinion that we should take immediate steps to mobilize our reserve forces—the women and children—to carry on such interests as poultry keeping. He further thinks that a national campaign is urgently desirable to arouse women to a sense of their duties in this particular respect."

There can be no doubt that English poultry and eggs are playing an important part—a sustaining and life-saving part—in the great war and the English government will welcome effort that will result in increased production of poultry and eggs. But the men and boys are needed for "cannon fodder," there seems to be no help for that. The women not only have to bear and rear the children from which to recruit new soldiers and sailors, but they will also be called upon to furnish labor and to increase the national food supply. It is a significant fact that women are being recognized as an important asset of a nation at war, just as important and necessary as fighting men,—for "an army travels on its belly" and must be fed and supplied with war material, as well as recruits. Will the war place women on an equal national footing with men? There would seem to be no doubt about the right in this matter. Meanwhile we can ponder on the wastefulness of war and wonder how much generations to come will have to pay to settle the bills of this one.

WE WOULD LIKE to see new-laid eggs, from well fed, well kept hens, selling at five cents each at retail the year around. It is a reasonable price, a fair and honest price, and one that delivers unusual value for the price. If the value of eggs as food was properly appreciated, if the buying public understood the worth of an egg from flocks

kept under sanitary conditions and fed on wholesome foods, if they had more confidence in the quality of eggs, and producers generally knew more about what it costs to produce eggs, we believe that it would be a comparatively easy matter to get 60 cents a dozen for new-laid eggs the year around.

In an article "On the Trail of the 5c Egg," in the *Sunday Magazine*, E. I. Farrington says:

"Eggs at \$1 a dozen or even more are not beyond the range of possibilities unless poultry keepers learn to coax more eggs out of their hens.

"Sixty cents a dozen has come to be considered a fair winter price for eggs. Certainly they cannot be sold for less at a profit. This makes the five-cent egg a standard of value. Five cents we assume as the price of a street car ride, a milk shake, or a cheap cigar. Oddly enough we cheerfully flip the coin over cigar counter or bar, but it sticks to our fingers when we buy an egg. You, however, who merely grumble at the price, know nothing about the difficulties involved in the production of that egg, clean, non-fertile and guaranteed not over two days old.

"Poultry keeping, once an incident, is now an art. The minds of trained men by the score are focused

on biddy. Inventors, called in to help, have found a fertile field. Inventions have come so fast the past few years that they have revolutionized the industry. Without these inventions the five-cent egg probably would be a ten or even fifteen-cent egg by this time."

Which is very good as far as it goes, but does not afford much relief to the millions of poultry keepers who are not getting over 25 cents a dozen for their eggs and who have to sell eggs at production cost or below it. If we could make "the five-cent egg a standard of value" it would be an accomplishment well worth while and would help many earnest and hard workers to earn a living such as they deserve to have.

G. R. Smith, in an article "The Meaning of Twelve Hens in a Back Yard" in the *Boston Herald*, says:

"Ah, the luxury of a 'strictly fresh' egg! But at 60 cents a dozen this delicious article of diet is rather too much of a 'luxury' for the average purse. Run a little egg factory of your own. Raise your own chickens, or buy them. Produce your own 'strictly fresh' eggs—and eat them too. Be a millionaire in one respect. Begin any season of the year. It's easy. The man who starts and starts rightly will never wish to stop."

Mr. Smith is mentioned as an "experienced poultryman," and for that reason we are surprised to find him terming eggs at 60 cents a dozen "too much of a 'luxury'."

Certainly a good new-laid egg ought to be worth as much as a cheap cigar, a glass of soda, a polished apple, an orange, or any one of the many things we now pay five cents for cheerfully and eagerly. Where can you get a better or cheaper breakfast than two new-laid eggs costing ten cents?

We would like to see more people

keeping "twelve hens in a back yard." Back yard poultry keeping is a good thing for all members of the family. The hens will pay their way in pleasure, profitable employment out of doors, and in eggs or chickens that may be used on the home table and offered to guests without any misgivings. The back-lotter may learn a few things about the cost of poultry and eggs and he will not be as ready to believe the wonderful tales of get-rich-quick profits from poultry, but, if he is in earnest and has a fondness for poultry, he will find pleasure and profit in his poultry work. It may not be a cash profit, when time, labor, and feed are considered, but there will be profit and real satisfaction for all the family just the same.

By all means keep a small flock of fowls of your favorite variety if you can possibly do so, and enjoy the pleasure and satisfaction that comes from producing at least a part of your own food supply for the family. There are no better foods produced than home-grown chickens and eggs.

Poultry Judges.

WITHIN a few months some of our poultry judges have been held up to ridicule, because when questioned off-hand they were unable to give exact Standard weights of certain breeds.

It is hardly a fair test or reasonable criticism. We never could understand why anyone should be expected to carry around in mind a lot of figures that could so easily be found in a reference table or book, and it seems to us that mere inability to quote the Standard weights, school-boy fashion, like a recitation of the old time tables, is a very long way from showing either lack of

knowledge or incompetence on the part of a judge.

Personally, we have never attempted to carry dates, weights, or other figures that we could easily refer to in handy memoranda. We cannot and do not see the need of cluttering up the mind with an accumulation of "junk" of that sort, when accurate data and figures are easily available for reference. There are other things that it is much more important to remember.

A poultry editor is almost daily called upon to quote the Standard weights of some variety. It is a part of routine work with us, yet we doubt if we could answer questions about Standard weights off-hand with any great degree of accuracy. In the American Standard of Perfection there are sixty-two weight tables. It seems to us that any poultry judge would be foolish to trust to memory for these figures when he could much more conveniently handle them by means of an accurate reference table. It is easy to criticise poultry judges, but it is probable that they really know quite as much about Standardbred poultry as do the rest of us.

Clean Journalism.

A GOOD many years ago some one ventured the opinion that fighting with an editor is like having a hand to hand scuffle with a skunk, since every one knows the following morning who has been in the fight.

This was voiced in the palmy days of the "fire eating" editor who was more interested in "nursing grudges" than in giving his readers something to think about.

Time effects its inevitable change upon all things, not excepting the editorial custom of publications. The average reader of today is not particularly interested in the editor's personal scrap with his neighbor or tradesman, and most readers are bored to the point of disgust at public airing of private grudge. Gradually, clean periodicals of whatever class have tabooed the "blood and thunder" brimstone editorial; which does not mean that an editor, in his personal word

Box A, Arcadia, Indiana

Leitner's Single Comb Buff Leghorns

Have made another great win at Rochester, N. Y., February, 1916, on two birds, winning 2nd cock, 3rd hen. At Chicago, 1915, 1st pullet, 2nd cockerel. My winnings for the season were the most consistent of any Buff Leghorn breeder anywhere. Grandest matings in the country for 1916—matings that will produce real quality. Let me prove it. Circular telling about my Leghorns sent free.

C. H. LEITNER,

R. F. D. No. 4, Box 8,

Elgin, Ill.

to his family of readers, is necessarily flabby, without character, or lacking in fearlessness.

The aim of the modern publication is to bring to the public mind whatsoever is of educational value or for the betterment of its readers, regardless of whose "ox is gored." But the really conscientious editor bent upon bringing about the greatest good to the greatest number, and whose hands are clean, refrains from entering merely a wordy combat against unfavorable personal attack.

There was once a man engaged in an important public pursuit who in going about his honest affairs was struck a malicious blow by an undersized assailant. It would have been an easy matter to have struck back to the point of annihilation, but instead of so doing, he kept quietly on his way unmolested by a pugnacious human reversion to an early trouble-hunting ancestor.

Obviously his course called for a certain amount of self-control and earnestness of purpose, but none can doubt his wisdom in pursuing it. The intervention of private animosity where public uplift should be the order, is not countenanced by modern journalism. An editor, today, in order to wield a worthy influence in the cause to which his journal is pledged must possess a certain broadness of mind, stability of character and great discrimination as to what is really worthy of publicity.

The object of any periodical should be that of arousing thought among its read-

ers, and this is best done by picturing actual operations, and fearlessly voicing sincere and honest opinions as to their worth.

In clean journalism there is no place for personal animosities or petty prejudices.

STANDARD BREED ARTICLE CONTESTS.

A Double-header! \$25 in Cash for Best Article on "Reasons for Selecting My Variety." \$10 in Cash for Best Article on "How I Produced and Prepared 1915 Exhibits." Read the Requirements Carefully.

MR. FANCIER-BREEDER: Here is a double-header prize article proposition that should appeal to your sportsmanship and stimulate you to put some real earnest effort and thought into an endeavor to win one of the prizes.

You have a favorite variety of Standard fowls that you fancy. You should know why you selected that variety, why its beauty appeals to you, wherein you see the beauty, and wherein you find enjoyment in overcoming the difficulties of breeding your favorites to closely approach Standard requirements. There are many breeders who have considerable sentiment about being known as "fanciers"—well, here is your opportunity to present your case and incidentally compete for a cash prize of \$25. Bear in mind that this article must be solely from the fancier's viewpoint and must not make reference to utility values or eggs and meat. After all, utility qualities are found in all varieties and the popular breeds do not differ materially in the eggs and meat values, so eliminating this feature will save repetition and any charges of extravagant claims. This article should be "Reasons for Selecting

Smith's White Leghorns

Another Great Win! My strain made the greatest winning at the Greater Chicago Show, January, 1916, of any exhibitor in the class. Won 1, 2, 3, 4, 5 cockerel; 1 young pen; 2 old pen; 2, 5 cock; 2, 3, 4 hen; 2, 4, 5 pullet; best display; etc. This great win, together with my big win at the Chicago Coliseum Show, December, 1915, and at the World's Fair at San Francisco, November, 1915, proves the quality of my strain. My winnings for the season were the most consistent of any White Leghorn breeder anywhere! Grandest matings in the country for 1916—matings that will produce for you and for me real quality! Let me prove it. Catalog telling all about my Leghorns sent free. Eugene Smith, 317 Galena Boulevard, Aurora, Illinois

A. A. CARVER'S 1916 Mating List R. I. Reds and Sussex OUT

HANOVER, PA.

My Variety." Be sure you name them.

The second prize contest will be for a prize of \$10 cash, open only to exhibitors who made their first exhibit in 1915 and calls for the best article on how you mated, cared for, reared, and prepared the birds you exhibited in 1915, to be entitled, "How I Produced and Prepared 1915 Exhibits."

These prizes are offered by Chiles & Company, Mt. Sterling, Kentucky, and it is a good clean sporting proposition well worth your while and open to fanciers of all varieties. Just the kind of a proposal you would expect to have come from "Old Kentucky." Here is the letter, read it and carefully observe the conditions therein:

Mt. Sterling, Ky., January 7, 1916.

Editor American Poultry Journal:

We note that breeders are offering prizes in your Journal for articles on various subjects, —we are always willing to get into the band wagon.

We know nothing about values save in dollars and cents and judge that the public, like ourselves, value money more than so-called cups, which may be low grade tinware.

Therefore we offer twenty-five (\$25) dollars in current coin of the realm, for best article on "Reasons for Selecting My Variety," giving the author's reasons why he selected the particular variety he is breeding, based solely on Beauty or the difficulties to approximately reach the Standard requirements. No egg bosh, utility, or anything of that kind to figure in the article.

We will give ten (\$10) dollars in hard money to the person writing the best article on "How I Produced and Prepared 1915 Exhibits," telling how he or she mated, cared for, reared, and finally prepared the birds exhibited in 1915. This prize limited to those who made their first exhibit in 1915.

As to who shall judge these articles we

leave that to American Poultry Journal. Our further interest in the matter is to pay whoever you may determine are the winners.

CHILES & COMPANY.

There you have two worth while prize offers for articles that are different from the usual competition articles. Go to it! The contest will close March 31, 1916.

Articles may contain about 1000 words and should be written on one side of paper only. Do not fail to observe the conditions named in the letter. We reserve the right to retain all articles submitted and to publish such as we consider worthy of space. Announcement of the winners and publication of winning articles will be in May AMERICAN POULTRY JOURNAL.

Send all articles to Dr. Prince T. Woods, Lock Box 4, Silver Lake, Mass., and mark them plainly "Chiles Co. Contest." Get busy now!

S. C. White Leghorn Contest.

ARE Single Comb White Leghorns popular? Well! Well! Just note what D. W. Young started by offering that \$50 cockerel as a prize for the best article on S. C. White Leghorns. Our January issue with the announcement was scarcely in the mails when the articles began to come in. How they did come in! Just a few at first and then the flood broke loose and the editorial staff offered to surrender unconditionally. When the final count was taken we had ninety articles on S. C. White Leghorns, and most of them good ones. No doubt

about our readers wanting that cockerel and not a shadow of a doubt about the popularity of the little egg machines.

Illinois sent in 11 articles; Indiana, 9; Pennsylvania, 8; New York and Ohio, 7 each; Canada, Iowa, Michigan and Wisconsin, 4 each; New Jersey, Oklahoma and Washington, 3 each; Kansas, New Hampshire, Massachusetts, Montana, California and Alabama, 2 each; North Dakota, Missouri, Oregon, Colorado, Tennessee, Kentucky, Arkansas, Minnesota, Idaho, Texas and Newfoundland, 1 each. That is *some* contest and well distributed. When it came to making the award we wished that there were many cockerels instead of one, but there was only one prize and but one article of the ninety could win it.

When the contest was about half over we wrote to Dan Young and told him that it was going to be a hummer. He sent the following reply:

Editor A. P. J.—Am glad to know that the contest has stirred up a lot of White Leghorn articles. I will see to it that the winner gets a full-fledged Fifty Dollar cockerel.
Monroe, N. Y. D. W. Young.

The final heat in that contest was a hot one when we got them thinned down to a dozen and all running close in a bunch. We had to organize a committee to help make the final decision. We congratulate the winner and all of the other S. C. White Leghorn enthusiasts who helped to make the contest such a success.

The \$50 cockerel is awarded to Karl Dittmer, Napoleon, Ohio, whose article was considered best in all requirements.

The winning article appears in another column of this issue of AMERICAN POULTRY JOURNAL and we also publish several other excellent articles received in this contest. From time to time we shall print more of them.

Have a Home Garden.

BE SURE to have a home garden this year. Plan your garden now. Even a very small plot of ground, intensively cultivated, may be made to yield a boun-

REGALS ARE RECORD LAYERS

Regal White Wyandottes have always been a great winning strain, but this alone does not account for their wonderful popularity. It consists in the fact that they stand today as the greatest known combination of beauty and utility. They are grand layers, make rapid growth and are true Wyandottes in type. Mr. M. K. Boyer of Hamonton, N. J., is one of America's oldest and best known fanciers. The following letter gives his opinion of the Regals:

My Dear Mr. Martin:

It may interest you to know that I have a pen of Dorcas hens that are doing remarkable laying. I bought them in the fall of 1913, while pullets, from a party who purchased the eggs from you. There were ten of them and for the year beginning November, 1913, they laid 1,920 eggs, or an average of 192 eggs each. This year is not quite completed, but at the rate they have been laying, I know they will not fall far short of repeating their performance as yearling hens.

For the combination of beauty and utility, I do not believe there is a strain in the world that can beat yours.

Respectfully,

(Signed) MICHAEL K. BOYER.

State of New Jersey } ss.
Atlantic County

Personally appeared before me Geo. E. Strouse, a Notary Public for the State of New Jersey, Michael K. Boyer, who being duly sworn according to law, deposeth and saith, that the above statement is true and correct.

Sworn and subscribed to before me this eleventh day of September, 1915.

(Signed) GEO. E. STROUSE, Notary Public.

JOHN S. MARTIN

Box 51

PORT DOVER, CANADA

tiful supply of vegetable food fresh from the garden.

Last year we had an unusually fine garden in spite of the cold and wet season. We had peas, beans, asparagus, lettuce, chard, corn, squash, melons, potatoes, carrots, turnips, beets, tomatoes, cucumbers and other truck in abundance; plenty for the home table and some to give away and some to sell. Possibly this "garden sass" cost us in seed, fertilizer, and labor as much or more than we would have had to pay at the market for stale and shop-worn vegetables. We can't say positively as to that, for we didn't have a garden for the purpose of keeping account of the cost or the cash profits. However, it did *pay big profits in satisfaction and convenience*. We had a bountiful supply of good things, of the sorts we prefer, and we had them fresh from the soil.

We would not be without a family garden, even if we had to cultivate a tiny plot of ground and grow things close and tied up to stakes and trellis, and each new crop close on the heels of the preceding one. The home garden is worth many times its cost and the cost need not be much.

Be sure to add a flower garden also just for the beauty of it. It brightens up the home place and helps to make everybody happier. Even if you have to plant in borrowed earth in pots and boxes, don't be without a garden of some sort this year. It will do you good just to watch things sprout and grow. We have seen some wonderful gardens on the roofs of city blocks, on porch roofs and in window boxes. Plan your garden now, make ready for spring. Get the real pleasure that comes from making plants grow, blossom and bear fruit. It is worth while.

You need a garden of both flowers and vegetables. Be sure you have one.

NET COST OF A DOZEN EGGS.

Twenty-one Dollars in Prizes for Best Articles.

WE WANT actual facts concerning the net cost of producing a dozen marketable eggs, for every month in the year and for all sections of this country. Every utility poultryman ought to keep an accurate account of what it costs him to produce eggs. We desire to make it an object to you to figure your net cost of eggs for us. Therefore we offer the following cash prizes for best articles on net cost of producing a dozen eggs, figures to include each month in the year.

First Prize for best article, \$10.00.

Second Prize for next best article, \$5.00.

Third to Fifth Prizes for next best articles, \$2.00 each.

Now, we do not want any stories of *faked profits*, we want facts about production cost. Any story that tells about a remarkable record hen with a wonderful yield of eggs, many of which were not marketable, and that attempts to show returns by subtracting the cost of that hen's feed from the presumed total value of her eggs, presents a faked profit tale that is misleading. We don't want that kind.

Figure your cost just as any manufacturer would. If you wish to attempt to show profits, state actual returns for eggs sold or for eggs used at the selling price.

Your cost account should include: *Investment cost*. Figure this at 5% for the year on money actually invested in land, buildings, layers and equipment. To this add taxes, insurance and repairs. If you rent the land, figure your rent instead of the 5% of land value. Do not forget to also figure and add *depreciation*. On buildings and equipment, in-

cluding fences, the depreciation may be conservatively figured at 10%. If you pay a water tax, or maintain a water system, the poultry should be charged with their proportionate amount of same. An important item of depreciation that must not be overlooked is the loss from sickness or death of members of the flocks, or losses from sale at pound

NAPOLEON at the zenith of his colossal career never gained a more complete **VICTORY**

HALBACH HAS THE MOST BEAUTIFUL WHITE ROCKS

H. W. HALBACH

Rural Route 1, Dept. C, WATERFORD, WISCONSIN

Eggs from the Best Show Birds ever produced
\$12 per 15, \$23 per 30 or \$70 per 100.

SPECIAL

300 cocks and cockerels at cut prices. Head your pen with one of these Champion-bred males at \$8.00, \$10.00, \$15.00 and \$25.00 each. Breeding trios, perfectly mated that will start you with this great line at \$15.00, \$20.00, \$30.00, \$35.00, \$50.00. Order direct from this advertisement. Get satisfaction.

prices of birds necessarily culled from the flocks and selling below cost.

Food expense should be figured at actual cost of food used for feeding the flocks. You will find that non-producers greatly increase the cost of maintaining your flocks.

Labor expense must be figured whether you do your own work or not. Charge for the actual time required in care of fowls and eggs at the usual rate paid for such labor in your section. We have to hire our poultry labor and the actual cost is 23 cents per hour.

Marketing expense should be figured if you intend to be absolutely fair with yourself in this matter. Profits cannot begin until your eggs are delivered to the customer. When you ship eggs you have to pay express, losses by breakage, cost of cases and return of same. If eggs are sold at the door they have to be packed in cartons. Our cost of marketing eggs will average the year around about 3 cents per dozen.

For the past five years we figure that it has been costing us an average of from 24 to 29 cents a dozen to produce eggs and place them in the market. Figuring the actual net production cost month by month for four years we obtained the following results:

NET PRODUCTION COST OF A DOZEN EGGS IN CENTS.

Month	Av. Cost	Low	Av. Market Price
January	42	32	35
February	38	25	35
March	17	15	30
April	15	13	21
May	16	14	21
June	18	11	22
July	21	12	25
August	25	14	27
September	33	15	30
October	45	35	35
November	50	36	45
December	40	30	40

This high and low average cost per dozen is given to show variation which occurred in the same months in different years and due to variable causes over which the poultryman has little or no control, fluctuations in egg yield, grain prices, etc. To some extent weather conditions affect the yield.

From figures from egg producers in various parts of the country we have received statements showing net cost per dozen eggs varying from 20 cents to 29 cents average for the year. According to the Thirteenth U. S. Census the average selling price of eggs thruout the farms of the United States in 1909 was 19.5 cents per dozen. The average production per hen was then about 80 eggs per year, 200-eggers are still scarce and it is a pretty good flock that will aver-

age better than 12 dozen eggs per hen for the year.

It is all very well to say that Madam X produced 360 eggs in a year worth \$9 at 30 cents per dozen and that she consumed \$1.80 worth of food, thereby showing a *fake* profit of \$7.20 on one hen in a year. But how about Madam X's 999 companion hens, who also ate at the same table and who brought the flock average for 1000 hens down to 144 eggs per hen per year? Also how about the other items of expense besides just cost of food alone? How about the "marbles," soft shells and other unmarketable stuff she laid and had counted?

We do not intend to say any more here about production cost. We want you to enter our contest and send us facts about what it costs you to produce eggs from your flocks. You are not limited to any special number of words. Simply state your facts and tell your story as plainly and thoroly as necessary and stop when you are done. Please write on one side of the paper only.

The contest will close May 1st, 1916, and all competing articles must be in our hands by that time. Announcement of the winners and publication of the winning articles will take place as soon thereafter as possible.

We reserve the right to retain all articles submitted and to publish such as we consider worthy of space. Don't submit fiction, give us straight facts and figures.

Send all articles to Dr. Prince T. Woods, Lock Box 4, Silver Lake, Mass. Mark them "Egg Cost Contest."

Get down your egg records and account book for your flocks for the past year and get busy. Most manufacturers figure that in order to live and show a profit they have to set the retail price at not less than three times the production cost. How about the egg farmer who ought to get 5 cents each for his eggs the year around, but doesn't?

Hon. Chas. M. Bryant.

HON. CHARLES M. BRYANT, ex-president of American Poultry Association, died at his home at Wollaston Heights, Mass., of pneumonia, on February 8, after an illness of a few days.

The news was a decided shock to his friends who had met him hale and hearty as ever, only a few weeks before at the big Boston Show. Mr. Bryant was mayor of Quincy, Mass., in 1902, 1903 and 1904, and was known as "Quincy's most aggressive and progressive mayor." He was a prominent business man in Boston and reckoned both shrewd and honest and an enemy to all grafters.

He was president of the American Poultry Association in 1907, 1908, 1909

and 1910, and later was a valued member of the Executive Board, bringing to the association business experience and executive ability that was of great value to the organization.

As a fancier of Rhode Island Reds and member of the Rhode Island Red Club he did much good work for the advancement of his favorite variety and was widely known as a judge of Reds.

He was an active sportsman and a member of the Megantic Fish and Game Club, Brookline Country Club, and was well known as a yachtsman in Boston Harbor and Quincy Bay.

DR. WOODS' NOTES AND COMMENT.

MARCH.

Ah, March! we know thou art Kind-hearted, spite of ugly looks and threats, And, out of sight, art nursing April's violets! —Jackson.

The American Poultry Association's annual nominating ballots will soon be counted. Wonder who the candidates for office will be? Quite a few members believe that we need a change.

Isn't it good to see those early chickens; such husky, sturdy little fellows? Well fed and well cared for they should yield good early cockerels and pullets.

All good mother hens that come broody this month should be set on selected eggs. It should be a good month for both incubator and hen hatching.

The demand for hatching eggs has been very good and some big hatcheries take most of the surplus. That is very satisfactory, as the market price of eggs has been slumping steadily. If we can hold enough hatchery trade for our output we intend to set 35 cents a dozen as the low asking price for table eggs sold at the door this season, to automobile, and other transient trade. We believe that if poultry keepers would co-operate and endeavor to fix the price of market eggs themselves, instead of permitting the middlemen and grocers to set the price for them, that the strictly fresh new-laid egg business could be put on a much more satisfactory foundation.

One customer on being told that our price was 40 cents, said: "Why, I can get eggs at so-and-so's for 30 cents a dozen." "Very well, Madam," we replied, "why not get them there? Our eggs are new laid, from well fed healthy hens and are fresh from the nest." "But I prefer your eggs," said she; and she took them at 40 cents and is still a regular customer.

KEELER'S WHITE WYANDOTTES

The Aristocrats of the White Wyandotte World

Have again demonstrated their superiority by winning at Chicago, January, 1916, in a class of 194 White Wyandottes, 1-2-3-4 cockerels, 1-2-4 cocks, 1-5 hens, 1-5 pullets, 1-3 young pens and 2-4 old pens. Seven specials, including Silver Cup for Grand Championship, \$50.00 Silver Cup for most points on any breed in whole show (3,500 birds); also \$25.00 membership cup.

The World's Greatest Strain. EGGS! EGGS! EGGS! EGGS!

The pens that will produce 1916-17 winners were mated December 15th, and I am in a position to supply you with eggs from the 16 best matings of White Wyandottes in America. These pens contain my Chicago winners, also the best birds reared the past three years—sons, daughters, brothers and sisters to these winners. They are bred right and mated right and will produce the winners for America's best shows. Send for my 1916 64-page art catalog and mating list (5 red stamps appreciated). Eggs, \$5.00 per 15; \$9.00 per 30; \$14.00 per 50; \$25.00 per 100. Special matings, \$10.00 and \$15.00 per 15.

CHAS. V. KEELER

R. F. D. 11

WINAMAC, INDIANA

An egg collector, on our refusing to sell him a case of eggs at his price—30 cents a dozen—told us that we would not be able to get more. To which we replied, that in such case we would not sell. After waiting outside in his wagon for a little while, he knocked on the door and said: "I want your eggs for my customers and will give you 36 cents a dozen for that case."

* * *

We believe that a little co-operation and real effort in the selling of market eggs on the part of producers in any community would result in better and steadier prices for good new-laid eggs. Too many producers are afraid that they will not be able to sell and so take what they can get. In our home town, at present writing, collectors are paying all sorts of different prices at the farm for eggs. One collector offers 30 cents a dozen, but will give 36 cents rather than not get the eggs. Another will pay no more than 32 cents; another offers 34 cents, and still another will not offer above 28 cents per dozen—all in the same locality and the same week. A buyer of live poultry paid a neighbor of ours 14 cents a pound for fine fat old hens, refusing to give more. On the same day the same man came to our place and offered 18 cents a pound for similar birds and finally paid 20 cents a pound for old fowl and 25 cents a pound for young. Also he short-weighted the man who sold at 14 cents a pound, but took our birds at our weights on our own scales. He always tries to "dicker" at our place, but he generally takes what we have to sell at our "take them or leave them price." Most buyers around here are Europeans and they don't think much of a producer that takes the first price offered. They are accustomed to haggling and dickering, in fact seem to enjoy it, though we don't. However, it is the only way one can trade with them and not leave all the profit in their pockets. It is interesting to note that they appear to enjoy the treatment they get at our place, as they come regularly and usually leave a gift of queer long cigars of plain rolled tobacco leaf when they drive away with their purchases. If we got left with the goods on our hands we should ship to market ourselves, but so far we have made the top price at the door without having to go to the expense of dressing and shipping.

At this season eggs can be incubated and turned into chicks that sell at better profits. There is good local demand in most places for day-old chicks from pure bred stock at from \$12 to \$20 per hundred. You can generally figure that \$12 per hundred for chicks is practically 6 cents each for your eggs. We do not expect to have any surplus chicks to dispose of this season that cannot be sold at good prices right at the door without the bother of shipping.

* * *

For private trade in market eggs we use a 2x6 egg carton, which costs us, printed and delivered, \$7.50 a thousand. This case bears the card:

SELECTED NEW LAID EGGS

*From Well Fed, Well Kept,
Healthy Fowls*

THE ANCHORAGE FARM

PRINCE T. WOODS, M. D., Prop.
Plympton Sta., Silver Lake, Mass.

This carton packs neatly into regular market cases. Later on we expect to seal it with the Massachusetts Poultry Society seal and serial number, when such are available. As only the best selected eggs right from the nest are packed in these cartons, we believe that they will help to create a greater demand for eggs from our farm.

Unretouched picture, showing the type of Leghorns that are bred by M. O. McDannell, Moline, Ill. Note the long back and low, well spread tail.—F. D. R.

Whenever we write up a poultry plant we always try to tell our readers just what we saw and learned that we believe useful and helpful to them. Every poultry farm has its lesson or lessons of value to other poultry keepers and readers are entitled to the truth and a faithful presentation of the facts as we see them. Altho the reports are written for readers, we are pleased to say that, to date, we have had only letters of commendation from the proprietors of the plants written up. They know that when we visit any farm we will tell the truth about it as we see it, without being influenced in any way by the amount of advertising they carry in this magazine or the lack of it. We are glad to say that the proprietors of this magazine have made this plainly understood. We have been encouraged to give our own personal view without fear or favor. During the coming summer we expect to visit and obtain the story of several plants that have never spent a dollar in advertising with us and may never do so. We have never yet visited a plant that did not have worth-while lesson and some real human interest story in it.

When we visited Dan Young last December, we wished that we could have spent more time there; we could have done so with profit, for there is much there that it is worth while to see and to study. We intend to go again and to make a longer stay. Our report in February issue, tho hurriedly written, was sincere and honest in its presentation of our views and we are glad to be able to give here a letter from the proprietor expressing his appreciation:

Monroe, N. Y., Feb. 5, 1916.

Dear Doctor:

I received a copy of your article from Mr. Bell and am using it in my mating list, so you may know what I think of it. Am glad to let you know that it is the best and truest article that has ever been written about my birds or place, and think if more of the editors would tell the real truth in their articles, the outside world would have more faith in the poultry business and not think that we were a band of hypocrites and crooks. With kindest personal regards to you and yours from Mrs. Young and myself.

D. W. YOUNG.

Mr. and Mrs. Young stand high in our esteem, and tho this was our first visit to their home, they are friends of many years standing. Naturally we are glad that they are pleased, altho we are sure that with more time at our disposal we could write a much better story and give

William Cook & Sons

Originators of all the Orpingtons

Box A

SCOTCH PLAINS

NEW JERSEY

(Established 1873)

EVENTUALLY if wanting the Best Orpingtons, any variety, you will end to their Originators. Why not now, and avoid loss and disappointment? Our guarantee of satisfaction is backed by a reputation of 43 year's standing; this means something to you.

Lower prices and better quality than anyone else. How do we do it? By breeding thousands of birds from the best in the world, and having made the Orpingtons, we KNOW how to mate for the best results. This knowledge *saves you money*. Advice free.

We have won over fifteen thousand first prizes. Our birds are recognized as the finest layers in the world.

Send for our new 1916 Illustrated Catalog with history of the Orpingtons and hints on poultry keeping.

EGGS from our winners and the finest Orpingtons in the world \$20 a setting; from fine stock at \$10 and \$5 a setting. Ornamental land and water fowl for sale.

Cook's Roup and Worm powder and Laying and Condition powder, at \$1 a box, are recognized as the best.

more interesting and helpful details about the work on that plant, for we know that it holds a great deal that is of worth-while interest to us and to our readers.

* * *

In November issue, giving our opinion concerning crooked breast bones, we

Mr. O. B. Warren, Hibbing, Minn., has really some remarkable S. C. Rhode Island Reds. The fine type of the birds bred by him is very much in evidence in the above picture.

said: "Generally a crooked breast bone indicates malnutrition at some period of growth or some lack of constitutional vigor. * * * * We are satisfied, whatever other folks' chickens may do, that

in our experience we never get crooked breast bones without some constitutional cause for it. The early roosting is not the cause."

Referring to this, a letter from R. A. Chiles, Mt. Sterling, Kentucky, says: "Read with interest Dr. Woods' ideas relative to crooked breast bone in your November number. I never knew of one where the foundation stock was vigorous and had plenty of good whole-some feed."

* * *

Our big February issue was a bit late and the several big shows and large number of pages put a lot of extra and rush work on everybody, printers included. As was to be expected, there were quite a few typographical errors and some whole lines left out, but the most ridiculous error of all was on page 237 where the types made us say: "Mr. Bell will testify that, when he was on our place last Spring, he saw 3 chicks that came from 30 eggs, hatched under two hens in our barn loft during April." A truly remarkable thing for Mr. Bell to see and testify to! But what we said and what Mr. Bell saw was "30 chicks from 30 eggs," a one hundred per cent hatch from two hens set in our barn loft. We hope that the printer gets this correction straight.

* * *

Reviewing the lengthy and tiresome discussion of the Harrison-Penick case in the December and January *Reliable Poultry Journal*, we are reminded of that old saying of Scott:

"Oh, what a tangled web we weave,
When first we practice to deceive."

Editor Curtis in his December issue on page 1157 tells how he stood with

Ex. Board report in hand and asked to be enlightened as to its origin. But, "no one saw fit to answer." Later on he tells that "neither Mr. Harrison nor anyone else volunteered to answer Mr. Curtis' question as to where this report came from in typewritten form." Then in his January issue, page 1252, he apparently

Single Comb Buff Leghorn cock, owned and bred by C. H. Leitner, R. F. D. 4, Box 8, Elgin, Ill. A winner at the Rochester, N. Y., Show, January, 1916. A bird of grand color and good type.—F. D. R.

flatly contradicts his December statement by giving what purports to be a verbatim stenographic report of his question and a thirteen line reply to

LATHAM'S Barred Rocks WIN

BEAUTY AND UTILITY STRAIN

Their record to date over 320 prizes, including 42 first prizes. All these winning birds were bred, raised and exhibited by the originator and owner of this strain. Heading my matings for 1916 are 13 of the finest pullet-bred males I ever had in my yards, including five first and second prize birds at the Palace and Boston shows of this year. All these males are either winners or bred from winners. Females in the matings are the cream of 30 years study and successful breeding of this line of Barred Plymouth Rocks. This strain is the richest blood line of high winning females at America's greatest show that are living today.

Eggs for Hatching, \$10 per Sitting

Better value in eggs for hatching cannot be bought anywhere at any price. Every egg I sell for hatching I guarantee shall come from the females that are in these matings, being the same matings I shall breed for myself.

The BEAUTY and UTILITY STRAIN is bred exclusively for production of Exhibition Females.

same by Mr. Harrison, in which said Harrison denies all knowledge of the typewritten report. It has been said of gossips that a tale oft repeated grows wonderously with each telling, and this much discussed case appears to be no exception to the rule. It is truly marvelous how it grows and changes with each new telling. At its present rate of growth it will soon crowd everything else out of both of Mr. Curtis' publications.

* * *

After reading Editor Curtis' many and ever increasing pages of "evidence," discussion, and remarkable tales of detective work, spying, charming confidences with hotel stenographers, wonderful deductions in which a Latin dictionary becomes transformed into a "law book" of unknown potentiality, water pitchers become imbued with untold significance, members look at one another with unknown meaning, and even Robert's Rules of Order becomes a storehouse of malignant deductions, we are lead to believe that the *Reliable Poultry Journal* editor's version of the Harrison-Penick case is even more remarkable in the annals of sleuthing fiction than Emile Gaboriau's famous *Monsieur Lecoq*. Altho we had some eight years experience with Mr. Curtis' unpleasant system of spying, we really did not know that he prided himself so much on his Sherlock Holmes' methods.

We believe we have read all that Mr. Curtis has written about this famous case; also the statements of Messrs. Veach and Bailey, and most of the evidence which has been presented, including the fact that Mr. Harrison sent three extra birds with his shipment which more than covered the one hen claimed

as missing. Also we have read Mr. Harrison's simple and manly presentation of his side of the case, which was received just as we were about to go to press. Considering all the facts, and other statements, which we have so far seen in connection with this case, we do not

see how the Executive Board could do other than exonerate Mr. Harrison and it really appears that it was asking a good deal of him to refund any part of the money. In fact it does not appear to us, personally, that the customer had any right to a refund according to the evidence and that such refund was a

matter of courtesy on the part of Mr. Harrison and not of right. We have known Mr. Curtis a long time, worked for him for eight years or over, and we know very little about Mr. Harrison, having only a speaking acquaintance with him, but we can say frankly, and without prejudice intended, that we believe Mr. Harrison has been both fair and reasonable in this matter. It should have been dropped at the close of the first hearing when both parties agreed to abide by the decision of the Executive Board as final.

* * *

We do not believe that any breeder should be called upon to accept the return of birds as unsatisfactory after they have been uncooped and introduced into the new owners yards or have been shipped by him to some other place for handling and inspection. There ought to be some limit in such matters. If any purchase is unsatisfactory it should be returned immediately, without delay. Today the city department stores are all changing their rules regarding "on approval" purchases and hereafter most of them will not exchange goods held more than three days by the customer. It is no more than right. In the case of fowls or other live stock found unsatisfactory by the purchaser the shipment should be returned within, not over, 48 hours after received. We had one customer last spring who bought a breeding cockerel and kept it two months without complaint, then he wanted to return it as unsatisfactory. We sent him another bird as a gift, altho we do not consider he had any right to one, but we were glad to satisfy him at the price, and we refused to permit the first bird to be shipped back,—told him to kill it or keep

D. W. YOUNG, Monroe, N. Y.

Careful feeding pays, and you know it

THE men who make the big money in poultry raising are experts on feeding. They watch their little chicks. They provide a feed having just the nutritive elements the chicks need. That's why they get results.

You don't have to worry—you don't have to mix your own feeds. We do that for you, and we have done something you cannot do—prepared a special feed your chicks can digest easily and thrive on. Its name is

H-O Steam-Cooked Chick Feed

Preferred by poultry raisers because the starch is easily digestible, owing to our process of steam-cooking. Free from excess moisture, so does not spoil, but keeps sweet for a long time.

Try H-O Steam-Cooked Chick Feed this year. One of our customers says: "I did not lose a single chick last year, and never was so successful in raising a lot of healthy, vigorous chicks."

it as he pleased. He was delighted with the second bird and we heard no more after getting his letter of thanks.

* * *

Referring to the article by J. F. Robinson in January AMERICAN POULTRY JOURNAL on "The Production Cost of a Dozen Eggs," Editor Harker in *The Pacific Fanciers' Monthly* says: "Mr. Robinson elaborates on the cost of keeping poultry, and produces all sorts of figures in the expense account to prove that one must get 25 or 26 cents per dozen for eggs the year around before any profit can be realized. Why not knock the business on the head and be done with it? But the point we wish to make, and which both Mr. Robinson and the editor of the AMERICAN POULTRY JOURNAL both entirely overlook, is the fact that, as we stated plainly in December *Pacific Fanciers' Monthly* we referred only to the food cost of one dozen eggs, not to the mass and mess of other expenses: labor; interest on investment; depreciation; axle grease for the wagon which takes the eggs to market," etc., etc.

We are glad to know that the Editor of *Pacific Fanciers' Monthly* was counting food cost only, but in his article which we quoted in November AMERICAN POULTRY JOURNAL he made it very plain that he was talking about "clear profit" and "net cost of a dozen eggs to the poultry keeper." On so important a question we do not care to make any mistakes and we certainly do not wish to have it appear that Mr. Harker was in any way misrepresented by us. However, we do not understand how any business man can talk about "clear profit" and "net cost" unless he figures all legitimate expenses; or if he refuses to include "the mass and mess of other expenses" and counts only the "food cost" of the fowl, which is only a part of the real cost of production. Now we do not believe that Mr. Harker would count the "net cost" or "clear profit" of his excellent poultry monthly by counting only the cost of ink and paper and leaving out consideration of the other expenses of publication.

We have no desire to "knock the business on the head," quite the contrary, but we do believe it is high time that poultry keepers had more definite knowledge concerning the actual cost of production of both eggs and poultry meat. We believe that by encouraging them to adopt business methods and to take accurate account of their expenses, we are helping them toward putting their business on a more safe and sane foundation. Poultry keepers have so long been fed on fake profits and tales of "clear profit" derived from subtracting the cost of the hen's food from the market value of the eggs she produced—which is not clear profit and certainly food cost is not net cost—that every season some enthusiast puts his hard earned savings into "egg farming" only to learn to his cost that it is not the golden road to easy riches that some have mislead him into believing.

A subscriber writes on this subject as follows:

Goshen, Ind., Jan. 30, 1916.

Editor American Poultry Journal:

Do you want to help the commercial egg farm to make a living and keep out of the poor house? If so, keep hammering away at cost of production and the necessity of getting a profit. I estimate the food cost only for my Leghorns at 15 cents per bird per month or \$1.80 per year. The actual cost of production for nine months is 20 cents per dozen and for the remaining three months is 40 cents per dozen. Labor and overhead expenses are 5

cents per dozen. Containers and postage 5 cents per dozen, to which must be added a reasonable and decent profit of say 5 to 8 cents per dozen. I am talking about strictly fresh, new-laid eggs, to reach the consumer in from three to six days from the time laid. I would like to hear from any commercial egg farm that is making money. Mr. Ott, of Waukegan, told the writer that there was not a commercial egg farm in the United States making any money. What say you?

A. C. LOOMIS.

That is only one letter out of many of like tenor. What we want is facts. Eggs are an important food product and egg farming is very necessary for increasing and improving the food supply of the nation. The only way to improve conditions in egg farming is to get it on an efficient business basis and there can be no real efficiency until egg producers get a better understanding of the actual cost of production and, if possible, learn how to lessen that cost, or how to get a better price for their product so that they can make a good living profit. It is possible that the cost of production

Winner of first White Indian Runner, old duck, Madison Square Garden, 1916. Very good type and color. Bred and owned by E. G. Curtis, Atsion, N. J.

may be made less by intelligent effort, but it is certain that the selling price of the best new-laid eggs should be higher than it now is the year around. Tales of easy profits, and profits based on food cost only, encourage poultry keepers and would-be poultry keepers to try season after season to make a living out of the business. Each year they struggle manfully and hope that it will prove better than the last. Yet, the past year the "high price season" has been shorter than for many years and in the low price season last spring the selling price of eggs dropped so low that only the favored ones could show a profit even above food cost.

Now, there is a fair living profit to be made from market eggs if the egg farm is well managed and the selling end of the business properly attended to. A good location on a good road helps, but even in poor locations we know men who have made a comfortable living out of producing eggs, making 2,000 hens show a profit of about \$1 per year per hen. There are successful egg farms, but the proprietors are hard workers and cut close corners on expenses; also they put a lot of effort into the selling end of their business. The more successful ones contract to sell the major portion

A Revolution in Egg Production

is the title of a new book by George G. Newell, just from the press, and its name states exactly what it is: A Revolution in the Methods of Securing a Large Egg Production, and

IT WORKS!

Mr. Newell leaves nothing to theory or imagination—he gives all the "whys" and "wherefores"—the cold figures and plain facts—he is a hard-headed business man himself—of just what this system will do and why it does it. He not only supplies detailed knowledge of how to care for poultry, but also gives the reader something in the way of a post-graduate course, and, besides all this, he brings forward subjects which, to our knowledge,

Have Never Been Taken into Consideration Before

This is not a book for beginners. This is not a book for past-masters. It is a book for every man, woman or child who keeps poultry for pleasure or profit, because it not only carefully analyzes the already well-known factors of heredity and environment, but takes up the heretofore un-

explored subject of lengthening the hen's working day in the Winter, when the egg yield is lowest, and shows that by application of the **new principles** laid down in this book you can secure a much larger egg yield.

The first 12 days after trying his new system

Mr. Newell Increased His Egg Yield Over 100 per cent

and he keeps it up. He received an actual percentage of 43.52 of an egg per hen per day during a very cold February. Other poultrymen are using this system with success—friends to whom Mr. Newell has explained it verbally, and it is now offered to you in a **handsome, illustrated cloth bound book of 112 pages,**

for \$1.00

AMONG THE SUBJECTS COVERED IN THIS BOOK ARE

Chapter I—Feeding and Care—Care and Feed in General; Balancing the Ration; Conditions Should be Watched and Noted; What to Feed; Under Feeding; Over Feeding.

Chapter II—Housing and Appliances—Automatic Feeders; Fussing vs. Economy of Time; Water Problems; Housing, Ventilation and Light; Trap Nesting; Incubators or Hens for Hatching.

Chapter III—Brooding, Breeding and Yarding—Brooding Problems; What Breed? Meat Production

a By-Product; Yards and Exercise.

ORDER TODAY OF

American Poultry Journal Publishing Co. 542 S. Dearborn St., Chicago

of their output, without regard for market quotations, to some large consumer at a fixed price of from 40 to 50 cents per dozen the year around. They really should get 60 cents a dozen in order to compare favorably in earnings with workers in other callings. There are also egg farms and market poultry plants that do not have more than one good

year out of three and where the proprietors work on, hoping each season that they will be able to do better.

We do not know of any egg farms or market poultry plants where the proprietors are getting rich out of their profits, but we do know of a good many where—counting good seasons and bad—the proprietors are making a com-

fortable living at healthful work which they enjoy, and earning quite as good a salary working for themselves as they would if they had to work in office, shop or factory. These men—and some women—are hard workers, and they are efficient in both keeping down cost and in selling their product to best advantage.

* * *

After a war the belligerent nations generally arbitrate to settle the differences which started the war. Wouldn't it be a little better and more civilized to arbitrate first? For some time now the national government has been skating on pretty thin ice, and likely to break into the war at any moment. One thing that has helped to keep us out of trouble was the fact that some of our experts did not consider us sufficiently prepared to fight. The story of the world to date proves that there is no surer way to have war than to prepare for it.

Just now a good many people are enthusiastic for preparedness. Later on, when they figure out who is to pay for it all—themselves, their children, grandchildren and great grandchildren—there may not be so much enthusiasm; but we shall know a good deal more about how pork barrels are filled. Governments—not the people—make wars. Wars keep the minds of the people on war and national patriotism and off of their own affairs and community interests. When the people begin to think, or have time to think, it is not so soft a snap to govern them.

But in the days to come, when armless, legless or hopelessly maimed old soldiers and sailors fill our public institutions or sell notions on our street corners, we hope that those who are now so keen for making soldiers and sailors of our young men, will help these shattered defenders of our country with their small change and encouraging support. Too many people turn the cold shoulder on the crippled patriots after the war has become history. We have helped a good many needy veterans to get a beggarly pension and seen many a "boy in blue" of other days dying neglected in the city slums. If we must have and will make fighting men, we should not neglect them when disabled and unfit to struggle with the world for a living.

* * *

Some poultry editors by ranting about misleading advertisements have been misleading readers to believe that the poultry business is the only one in which advertisers make extreme and extravagant claims. As a matter of fact, if one will look over the various magazines and trade journals, he will find that the majority of poultry advertising is pretty clean when compared with general and special advertising in other lines. In a recent bulletin issued by the Automobile Legal Association attention was called to this particular form of exaggeration in the following comment:

"In looking over an automobile trade journal recently, a motorist discovered that by using certain patented devices, enumerated below, he could save gasoline in the percentages which follow:

By using Blank's tire.....20%
By using Blank's car on remover.....25%
By using Blank's carburetor.....40%
By using Blank's gasoline feed.....25%
By using Blank's gas saver.....20%

"We have no doubt that by reading other trade journals, other patented devices could be found that would bring the total up to 200% or more, so that an automobile, instead of consuming, would produce gasoline."

"Peerless-66" is the Most Remarkable Hatcher in the World.—H. M. SHEER

Over 50 Improvements for 1916

FRIENDS, whether you are buying your first machine or figuring on an addition to your equipment—or replacing of old machines, the one hatcher in the world for you is the 1916 Peerless-66. It is pre-eminently the incubator for everybody.

For 1916 I have introduced over 50 improvements. And that, mind you, in a hatcher that had already set a world's record for results. Now, the 1916 Peerless-66, delivered to your home for \$6.60, stands absolutely as the only practical, all-metal, fireproof, everlasting machine produced. It is the only machine of its size with a perfect heating and heat distributing system. It is the only incubator ever produced alike adapted to the largest poultry raiser and beginner as well. Tens of thousands of users have

Proven Peerless Principles Perfect

They have proven that this hatcher, all metal, round like a nest, built on the famous Sheer Unit System, is just the right size to give the greatest efficiency. It is the right size to give the greatest economy. It will last for years. They have proven this by the profits this hatcher has put in their pockets. That's why J. H. of Georgia, reports:

97% Hatches

That's why Mrs. J. D. of Mo. reports 51 chicks from 53 eggs. That's why L. M. F. of Ill. says his poorest hatch was 46 chicks out of 50 eggs, and his best 50 chicks out of 51 eggs, this last record with the new Peerless-66. There are thousands more. Let me send you the names of users to convince you that the Peerless-66 is right in price, results and satisfaction.

\$6.60
East of Rockies
DELIVERED

Heat, Moisture, Ventilation
All Are Perfect

all working together as a self-regulating unit. The machine is equipped throughout with the famous Sheer Fixtures. The wonderful Sheer Water Thermostat Regulator automatically controls heat, regulates moisture and ventilation. Overheating is impossible. The heating plant is a marvel. Simple, positive, unfailing.

Guaranteed

We give the broadest and most liberal honest guarantee ever given on a hatcher. Guaranteed to hatch every hatchable egg.

Hot Air or Hot Water

We supply the PEERLESS-66 with either hot air or hot water heat, as you wish, for 1916 at the same price. Never before has such an offer as this been made. We recommend the hot air however, as absolutely efficient as any hot water machine.

No Freight to Pay The Marvelous Price of the Peerless-66 for 1916 is \$6.60. Delivered anywhere East of the Rocky Mountains. Pacific Coast price, \$7.00, delivered.

Send for Book and Record of Results which tells facts about the Peerless-66 which we have not space for here. Send for it today—free—or better yet, send us your order now.

Peerless Brooders

are as wonderful as Peerless Incubators in efficiency, in economy and in rearing strong chicks. Round like the hatcher, 66-chick capacity, all-metal. Simple heating system, hot water run.

Saves lives of chicks

ANDERSON, IND.

Horticulture for Poultry Keepers

Conducted by Thos. F. Rigg, Iowa Falls, Iowa.

I AM writing these lines in my hotel in Miami, Fla. The weather here is delightful. The thermometer registers about 72 each morning at seven o'clock and the whole country hereabouts is looking its best now. The flowers are in free bloom, as are the shrubs. The thousands upon thousands of grape fruit trees hold an abundance of golden fruits. The birds are mating and nesting and all Nature is in a happy mood.

The great market gardens stretch out toward the Everglades. Here are thousands of acres of tomato, pepper and egg plant gardens and it is most interesting to visit these gardens and the packing houses also. The negro pickers sing as they gather the vegetables, and it seems as if it were a gala day on each and every plantation. Just now the prices received for vegetables are high. At one egg plant farm the proprietor told me he had already received \$6,000 and figured he would take \$12,000 off his ten acre place by May 1st. Some of the vegetable growers here make a lot of money, and some of them fail.

The grape fruit growers are getting good prices for their fruit and are happy. The canker which was so prevalent in this section last season has been pretty well stamped out by the government workers, who burned many thousand trees last Fall. Whole orchards were burned to the ground. It was a severe and costly treatment, but the only one which would effectually rid the country of the dread disease.

Fresh eggs are selling at from 60 to 70 cents per dozen. There are but few large flocks of poultry here and several attempts to maintain egg farms in this section have resulted in failures. I am of the opinion that, in time, egg farming will be profitable here. But the northern man who comes down here will find that he must first learn to adjust himself and his hens to a new condition, and one wholly unlike, what he now holds, as good poultry farming.

White Leghorns and Rhode Island Reds are about the only poultry I see here. These two breeds seems to be better adapted to conditions here than are any of the other Standard breeds. Breeders here tell me that the Reds seem to forget all about becoming broody and that many of them here are really non-setters. They do not seem to be subject to the ravages of insects, and in this respect are a most desirable breed. They certainly do adapt themselves more readily to the new order of things than even the sprightly Leghorn.

* * *

I note your very kind offer to write about Florida conditions and wish to avail myself of your offer. I have a residence property in Cody, Wyo., a conservative valuation of which would be \$2,000. It rents for \$20 per month. I wish to trade it for land suitable for fruit and poultry farm. Am not particular about the location, or rather, will accept the location that offers best advantages.

I have an offer of an even trade for twenty acres at Vero, Fla. It is drained but un-

cleared. Has light palmetto and pine. I do not know the name of the promoting company. The agent here assures me that it is a great place to make money on fruit and poultry.

I have another offer of fifty acres in De Soto County, seven miles from Arcadia, which is merely fenced. No other improvements.

I note the advertisement of another company offering what they call fine hog and corn land in the Everglades. Another offering what is called the "Famous Ridge Country."

As I have no proper conception of what Florida is like, and presume that there are plenty of lemons being offered under the guise of citrus lands, almost any information you can give me would be of help in solving my problem.

I might add that I can also get a trade for Southern Indiana hill land, said to be good for fruit, with fair improvements.

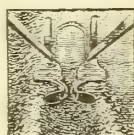

I trust that you may not find this request too much of a nuisance.

Indiana.

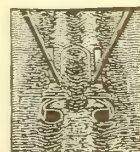

W. S. Jennings.

Grow your own Vegetables

Cut down your living expenses. You'll be astonished how easy it is to save time, labor, and money, and get bigger and better crops when you use

Opening Furrow

Closing Furrow

First Hoeing

Cultivating

Planet Jr Garden Tools

They do twice the work in half the time

They take the drudgery out of garden cultivation and make it pleasant recreation. Thousands of Planet Jr hand tools (seed drills and wheel-hoes) are used in kitchen-gardens as well as in market-gardens, and wherever best and biggest crops are wanted with least work. Fully guaranteed.

No. 11 Planet Jr (shown above in action)—A Double and Single wheel hoe in one. Straddles crops till 20 inches high, then works between rows with one or two wheels. The plows open furrows and cover them. The cultivator teeth work deep or shallow. The hoes are wonderful weed-killers. The rakes do fine cultivation and gather up trash. Unbreakable steel frames. 14-inch steel wheels and specially hardened steels, both new this year. *The greatest hand-cultivating tool made.*

No. 4 Planet Jr Combined Hill and Drill Seeder, Wheel-Hoe, Cultivator and Plow pays for itself in a single season in the family garden as well as in larger acreage. Sows all garden seeds (in drills or hills), plows, opens furrows and covers them, hoes and cultivates easily and thoroughly all through the season. 30 other styles of seeders and wheel-hoes—various prices.

New 72-page Catalog (184 illustrations) free!

Describes over 70 tools, including 12 entirely new ones, and improvements to our Seeders, Wheel Hoes, Horse Hoes, Harrows, Orchard-, Beet- and Pivot-wheel Riding Cultivators. Write for it today!

I wish I could make a good trade for Mr. Jennings and place him on a fruit farm that would yield him financial profit and contentment. But I cannot do this. I do not know that I can even wisely advise him. The land at Vero, Fla., is good fruit and vegetable land when cleared and subdued. How little the northern man knows what it means to "make a farm" out of the Florida forest! It means a great deal of work and the expenditure of a great deal of money. Not only that but the northern man finds conditions wholly different from those in the north. He must begin all over again, as it were. Not one northern man in ten succeeds down here upon the farm. There are no local markets here of importance. It is a shipping proposition almost wholly. If a man has sufficient capital, is a good business man, and willing to work very hard he can make money here, as well as elsewhere.

De Sota County is one of the best in the state for the production of grape fruit and oranges. There are many profitable growers there.

I want to advise all my readers to beware of the men and companies offering lands in the Everglades. The northern cities are full of these men and agencies. The Everglades are a great swamp, consisting of several million acres of land covered largely by water. Do not believe the promoters when they tell you that the lands will some day be drained and thus cleared of water. This great swamp is below sea level in many places and can never be made farm land.

If Mr. Jennings wishes to make orcharding his work I advise him to go and look over the land in Indiana. He says this is hill land. If it is the sort of hill land adapted to apple growing, he had far better trade his western land for an orchard site there than to exchange it for Florida land. An apple orchard in Indiana, consisting of the best varieties of apples, will, when properly handled, yield a large annual profit. Such an orchardist is near the best markets in the United States. He is producing something which everybody wants and will buy, something which he does not have to rush to market and sell at the other fellows' offerings. He is engaged in a sane and safe business. Florida is a land full of beauty, and I may say, full of opportunity. Here men are enjoying life and prospering but not to the extent they do in the fertile north. No man who is able to labor—and we all must labor wherever we may locate—need in my opinion, fear the Winters of the north, disagreeable as they are. Up there, as well as here in the land of sunshine and flowers, the great law of compensation is always at work and he who is called upon to bear the inconvenience of the long cold Winters is rewarded, just as he who is given perpetual sunshine and balmy weather must pay the price for it all. Out in my Iowa orchard I have to fight insects and fungus diseases for a few months in the year. Then Winter sets in and does away with all that. Down here the fruit grower must combat the pests 365 days of the year. You see he is paying the price for the lovely weather and his ever present flowers and birds and sunshine. Just as I must pay the price for the service nature renders me in my orcharding by sending weather to clean and purify my trees. And so it goes on, always the law of compensation. We may choose Florida or Iowa or elsewhere, but we must pay the price for all the good things any climate yields.

* * *

Thought I would take advantage of your offer to A. P. J. readers to give them information regarding poultry raising in Florida. With the mercury down to 20 or 30 degrees below zero, a person thinks of a warmer climate in which to raise chickens. Have some land near St. Cloud, in Osceola County. Spent a Winter there several years ago and certainly enjoyed the climate. Had not begun raising poultry then and did not pay particular attention to the matter, but it seems it would be an ideal country for the business, but I know there must be some very serious drawbacks, as I know that Florida does not rank very high in the production of poultry. Wisconsin.

Frank Merrill.

St. Cloud would not, in my judgment, be a favorable location for a poultry plant, as the local market would not be of much importance. My advice to Mr. Merrill is that he had best go to St. Cloud and make a very careful investigation before deciding to establish a poultry plant there. I venture the opinion that after he has made the investigation he will decide not to go into such a deal.

Poultrymen!

**Berries Will Pay
Your Feed Bills**

Plant your waste spaces to Allen's true-to-name berries. People are always willing to pay top prices for them. Allen's plants are hardy, healthy and heavy-bearing. Many varieties adapted to your soil, climate and markets. Packed fresh for shipment. We have over 300 acres in small fruits exclusively. Our 1916 Book of Berries describes each variety, and tells clearly how to select, plant, etc. 48 pages, 12 plates in natural colors. Send for your free copy today.

DR. M. A. HANSEN

won at the Coliseum, Greater Chicago and Milwaukee Shows.

OSAGE, IOWA

Your column in December A. P. J. refers to "Alberta peach." Is this a new variety, or is Elberta meant? Am a stickler for correct names of varieties. I dislike to hear Winesaps called "Saps" in local parlance. Virginia. C. A. Langston.

Mr. Langston is correct. I too, dislike to see fruitmen, and especially writers, careless in this handling of the names of established varieties of fruit. I think, perhaps, in the case referred to by Mr. Langston, I was guilty of carelessness. I intended to write it "Elberta." A few years ago an Illinois man brought out a new peach which he named "Alberta," but the people and the trade refused to accept it.

(NOTE—It is very good of Mr. Rigg to shoulder the blame for this error but when we consider the list who come after him in handling his manuscript, we think more than likely one of the following may be to blame: transcriber of notes, editor, printer, proof reader.—Ed.) * * *

Only about one-thirtieth the number of citrus fruit trees that were infected with citrus canker one year ago have been located by the state plant board inspectors this year, ac-

Cockerel heading 1st S. C. White Orpington pen, Chicago, January, 1916. An excellent type. Bred and owned by J. L. Schabell, 3331 Cuyler Ave., Chicago.—E. W.

cording to Chief Inspector Joy Heck, of this district. This flattering news were told the members of the Dade County Fruit Growers and Truckers' Association last night and was received with applause by the large number of growers present.

Inspector Heck's report consisted of a comparative statement of the conditions that existed January 9th, last year, and the report of Saturday and showed a material falling off of canker infections.

January 9th, last year, according to the report, there were but nine inspectors employed against thirty-two men on the pay roll last Saturday night while on the same date last year there were 7,675 trees inspected. The number of trees inspected this year amounted to 63,851. On January 8th, this year, the inspectors found but one infection against twenty-two on the same date a year ago.

While there are three times as many men engaged in hunting canker as there were a year ago, the four weeks ending last Saturday, resulted in the finding of three infections against ninety-two during the corresponding period a year ago or less than one-thirtieth of the amount.—Miami Herald, January 24th, 1916.

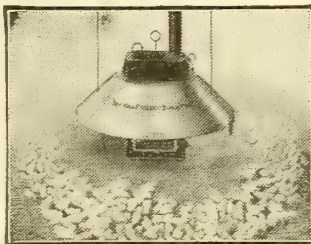

This is a statement of fact that will be welcome news to the numerous northern people who last season invested in citrus groves in this vicinity.

* * *

C. F. M. Smith is doing much to determine what is what in poultry raising in Florida. At his home in Winter Gar-

POULTRY RAISERS, HEAR US!

ARE you satisfied with your chicken business? How many dollars have you to exchange for dead chickens this year? Will you get enough pleasure out of the chicks in a few weeks before they die to pay you for your trouble?

Are you going to keep on hatching chicks for the worms of the earth to feed on? Or, is it time you turned over a new leaf and raised stock which will produce a profit? If so, buy the Hill Colony Brooder, \$30 or the Magic Brooder, \$15. They are absolutely reliable. They have no equal. They are not made like other brooders. They lead the world in construction and efficiency and the fire never goes out. Equipped with both top and bottom draught, coal magazine, gas-proof chamber and the best grate in existence.

If a brooder leaks gas and will not hold the fire it is of no use to you.

BE CAREFUL WHEN SELECTING A BROODER AS YOU ARE DECIDING YOUR OWN FATE.

We will cheerfully refund the money after thirty days trial if they do not do all we claim

IF YOU WISH TO SUCCEED YOU MUST HAVE BROODERS WHICH WILL DO THE WORK, OTHERWISE IT WILL BE IMPOSSIBLE. Write today for booklets describing our brooders. They are full of valuable information which will benefit you. **AGENTS WANTED.**

den he has a very complete fancier's plant, to which the editor of the Times thus refers:

C. F. Mather Smith, of Oakland, took us up to see his pens of poultry Tuesday afternoon, and the home place and poultry yards are certainly show places. Among his birds are the Royal Sussex, from Crystal Palace, London, which were the winners of the first prize last Spring; Speckled Sussex, first prize, same; Light Sussex, imported by C. A. Case, of Michigan; White Cornish, first prize winners at Boston; Dark Cornish from T. D. Moore, of Kentucky; White Langshans; Buff Cochin Bantams; Sicilian Buttercups; Du Maresque importation; Red Carneux (Belgian) pigeons, and Ideal white pigeons. He has two birds, a cockerel and a hen, that are valued at \$50 each, and all of his stock is of the highest strain. If you have never seen Mr. Smith's birds it is well worth a visit.

* * *

I am giving a number of my Miami friends a treat by presenting them with Delicious, Grimes Golden and King David apples raised on my trees in Iowa. These people who cannot raise an apple are delighted, and highly prize my offering. And I notice that the northern people who are at the hotel are exceedingly pleased to get a few of the beauties. The apple is surely the King of

First prize Barred Rock pullet, Illinois State Fair, 1915. Also won first at the World's Fair, San Francisco, Cal., 1915. Unquestionably one of the best Rock pullets shown to date. Bred and owned by S. N. Tremper, Lock Box 729, Sandwich, Ill.—F. D. R.

Fruits. Paradise would be a barren place for me if I could not raise apples there.

* * *

Practically all men who have only a "backyard" fruit garden, grow things for the family use and for the extreme satisfaction of "just growing things," but where these are combined with a splendid financial profit, the height of interest has about been reached. This exactly fits the case of Dr. T. G. Hetherlin, of Missouri, who has a fruit garden in the rear of his residence of which he is justly proud. It is surprising how the returns from a few choice, high quality fruit trees will count up. He has only seven trees and a small grape arbor. Of course he takes good care of them. Some pruning and spraying and a few dollars invested in a hand sprayer. The Doctor says that the returns from this planting, not including 315 bunches of celery, was as follows last season:

Keep a Record of your eggs

1916 Egg Record and Calendar Beautifully Colored FREE

Just send your name—a postal will do—but be sure to send it N-O-W.

Every poultry raiser should have a copy of this beautiful and useful Monthly Calendar and Daily Egg Record. Designed by a famous poultry artist, printed on special paper in FULL COLORS and is ABSOLUTELY FREE. Nothing else like it. The supply is limited, but if you write TODAY you can have a copy. We want to send it to you so that it will serve as a daily reminder to feed your chickens.

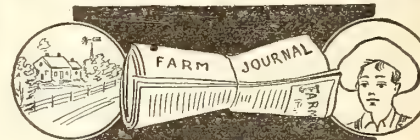

Dickinson's Globe Feeds

You ought to know all about them. They're the profit-making kinds for you. Scientifically blended from pure, sweet, thoroughly cleaned grains, "GLOBE" Poultry Feeds go farther and nourish more than ordinary feeds. Besides, these perfectly balanced rations are cheaper than if you bought the grains and mixed them yourself.

Look up the "GLOBE" Poultry Feed Dealer in your town. If you don't know who he is, write us and we'll tell you.

I wish I could do something to awaken an interest in this backyard tree planting, for such a planting should be made by every home owner. Resolve to plant a few fruit trees next Spring—and then do it! You owe it to yourself and your family and to the community to do so.

* * *

As a reader of your valuable department in A. P. J. and an old resident of Chicago, now gone South to "Ole Virginny" to raise poultry and a little fruit away from the whirl, I beg for some advice.

On account of necessity for shade, I had figured on planting some fruit trees, apples, peaches, pears, etc., in the chicken runs. In order to keep down the parasites, incident to trees, it will of course be necessary to spray them and make the fruit of good quality.

What bothers me is, will the spraying be harmful to the poultry. If so I shall have to plant other trees for shade.

Harry C. Martin.

Occasionally I hear of a case where fowls have been killed by eating grass in yards and archards where arsenate of lead and other poison spray materials have been used. Therefore I take it that there is some danger from its use on trees in the poultry yard. Personally I have had no such trouble. For years I had some poultry runs 24x132 ft. quite closely planted to cherry, apple and plum trees. These trees were sprayed twice each season with arsenate of lead, a poison. I have seen the grass on these runs white with the arsenate of lead after a spraying of the trees, yet the poultry was not affected, and certainly they ate of the grass at will. Have had the same experience in the orchard. I do not hesitate to use this spray freely where the poultry has the run of the yards. I can say, therefore, that in all probability Mr. Martin will have no trouble in using this spray material.

* * *

In answer to P. C. Crowley, of Wisconsin: I think you will make no mistake in planting your proposed orchard to Wealthy and McIntosh Red. They are both early apples and must be placed on the market soon after picking unless you have cold storage facilities.

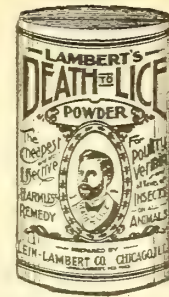

* * *

I am much interested in your department and it is the first one I read in American Poultry Journal. Some eight miles from here is an old apple orchard, of which some few trees of the "Dominie" variety are still alive, which is, to my notion, one of the best of the older sorts.

In the nineteenth annual report of the Ohio State Board of Agriculture for the year 1864, from fifteen reports of Ohio apple growers on "The best six or twelve varieties of Winter apples for market." Fallawater (Tulpehocken) leads the list, followed by Baldwin, White Pippin, Rhode Island Greening, etc., some fifty varieties being named in all.

There is also published in the report a "Fruit Catalog for Ohio," which contains 115 varieties of apple, 69 varieties of pear and 35 varieties of peach.

The Dominie is one of the old sorts which are highly prized by so many people who were accustomed to eating these fruits in their youth. It is a fairly

good apple but has been supplanted by superior sorts which the buying public consider better.

* * *

In answer to H. P. Porter, Indiana: White Pippin, synonym of Ortley, an old New Jersey variety, which Cox describes under the name of Woolman's Long Pippin. In 1825 Floyd sent fruit of it to the Royal Horticultural Society of London, under the name of Ortley. In portions of the West and South, Ortley is a favorite for home planting. Also known as White Bellflower and White Detroit. Is also synonym of Canada Pippin. Warden says its origin is unknown. It is claimed by some authorities that it was brought West by Silas Wharton. For some time leading pomologists claimed it was the Canada Rienette, but that claim was given up long ago. It is not extensively planted in any of the orchard districts of this country or Canada.

* * *

The tomato growers of Florida are hit hard by the scarcity of potash. It requires a fertilizer carrying not less than 6 per cent potash to mature the tomato here so that it will carry to the northern markets in good condition. At present the growers cannot buy more than a 2 per cent mixture. As a consequence many of the largest growers here have not planted a vine this season. Dr. N. W. Burkhardt, of Cincinnati, who usually has in 300 acres of this vegetable, is working no ground this season, letting his land go back to the native grass.

* * *

James L. Keen, one of the most extensive and most successful strawberry growers on Long Island, N. Y., is here for the winter. Mr. Keen and the writer are having a lot of fun in visiting the big strawberry ranches hereabouts. "I cannot get 50 cents a box as the growers here are doing at present, but I am satisfied that northern growers find the production of their berries more profitable than do the men who are raising them here," said Mr. Keen, who gets from 20 to 30 cents a box for his extra choice berries and does not have to pay out so much money for fertilizers as the Southern growers do. Nor does he have to pay high transportation charges. Another instance where the law of compensation is at work.

* * *

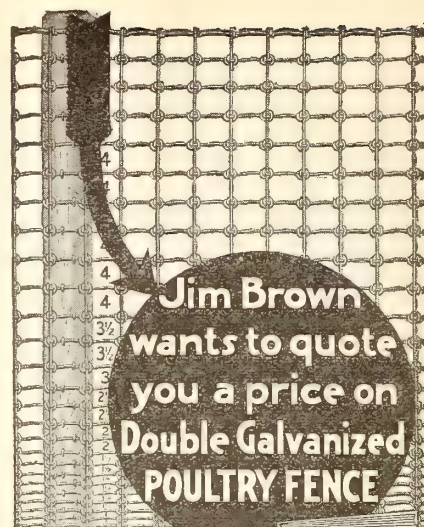

Three years ago an agent of a California firm was here selling the farmers roots of the spineless cactus. It was to "supply the cattle and hogs and poultry with a better feed than grass or hay." As grass and hay are about as scarce as hen's teeth, the farmers bit eagerly, and the agent did a big business. It would not be well for that agent to show up here now. The cactus was a failure—a total failure—just as it has proved to be wherever grown. I wonder what the next "great find" this California firm will spring on the farmer?

* * *

Northern fruit trees, especially apple trees, should be sprayed this month with either scalecide or lime sulphur mixture. This dormant spray is a great benefit. It will rid the tree of all scale and clean it up in good shape. No grower can afford to neglect to so treat his trees this month.

* * *

When I left home my apple trees were full of fruit buds. Since leaving the thermometer there has registered 24

degrees below zero. A letter received this morning tells me that a rain and sleet storm was on for twelve hours, followed by a drop in the temperature to 14 degrees below zero. Pretty severe test for several varieties of apples and pears upon my place. But if any are killed I shall have the fun of replanting. I always plant two trees for every one I have to dig out. So you see I am bound to win out at this game.

* * *

While in bathing on the ocean beach yesterday I met Henry A. Caldwell, of Virginia. The waves were pretty high, and we were both resting, with a hold on the guard rope when I overheard him ask a young man if "The box of apples came this morning?" It was not long until we were talking fruit and having a royal good time comparing notes. Mr. Caldwell was engaged in apple and peach growing in Colorado for a number of years. He lost many crops by late frosts, and decided to sell out and remove to Virginia. He is planting a 100-acre orchard of apples in Bedford County on the mountain side, where the air drainage is so good that late frost cannot possibly injure a crop. He is planting largely to Stayman Winesap.

* * *

In answer to O. L. Harris, of Ohio: I think you will make a serious mistake in planting McIntosh Red on the Ohio River hill land. Put in Rome Beauty as a leader. Think you better specialize on this variety.

* * *

Still the calls for information as to where the "good apples I used to eat when a boy" can be found continue to come to me. I am asked to tell where stock or scions of the following sorts can be secured. Milton, Wisconsin. Early Winter, Red King and Early Bright. I cannot give the information as I have never heard of any of these sorts. Can any of my readers locate any trees of these varieties?

* * *

Go over every fruit tree on your place this month and see just what each needs in the way of pruning and re-pairing. The bearing trees should be pruned now if you have neglected this work. The young trees, those set out last year or the year before, in fact, all the trees not yet in bearing, should not be pruned until just before growth starts in April. This is a very important matter with the management of a young orchard.

* * *

Frank C. Stockton, of Michigan, is setting out twelve acres to black currants. He writes me that each season this fruit sells in the Chicago market for double the price paid for red currants. I think the Stockton planting will be the largest black currant field in the whole country.

Prop. Whatglen Farm

Black Minorcas As I Know Them

by Frank McGrann
WHATGLEN FARM
LANGASTER, PA.

HIRAM J. DEMMY
Superintendent

I HAVE often been asked in letters from people contemplating going in the poultry business, why I recommend Black Minorcas. As I have bred Black Minorcas so long and know their good points thoroly, naturally I do not hesitate to recommend them in the highest terms to anyone desiring to go into the poultry business for pleasure or profit. Keeping poultry for pleasure or profit has its interesting features for old and young alike. There is no other industry or profession that combines greater opportunities from which to derive pleasure and profit than this safe and sane occupation.

Poultry work in itself is very interesting. It is out of door work, healthful, and as a profit producing business adapts itself very readily to the finances, ability and capacity of everyone.

Of course, to derive a certain amount of pleasure and profit, the strain of fowls has something to do with it. I, for instance, like the Minorca better than any breed I know of. I have tried them for years and have not once found them wanting. The S. C. Black Minorca is one of the oldest and best known varieties of standard-bred poultry. While the history and origin is not known as well as some of the more modern varieties, it does not matter, as it has no special importance. After the American fanciers care for them there is ever present a modern high quality condition which has been attained only after years of careful intelligent line breeding, and the results that have been produced in this breed are most satisfactory. There is no breed that breeds more true to type and color than the Black Minorca. They are strong and vigorous by nature and the size which we have attained at Whatglen Farm is greater than ever and by careful selection we have produced an excellent laying strain.

We have Black Minorcas on our farm weighing 10 to 12 pounds or more; females weighing as high as 9 and 10 pounds. The standard for Black Minorcas calls for weights as follows: Cocks, 9 pounds; cockerels, 7½ pounds; hens, 7½ pounds, and pullets, 6½ pounds. These weights are most easily attained by the Black Minorcas and I believe quicker than by any other variety.

S. C. Black Minorcas lay absolutely pure white eggs of the largest size produced by any known variety of fowls and are easy winners in competition with eggs of other breeds. Minorcas are consistent layers, mature quickly and begin to lay as early as any variety, and when they begin, they produce these large eggs in a perfect rhythm thru all seasons and under all conditions.

Our birds are all kept in open air front houses and the vigorous constitu-

OUR COLOR PLATE.

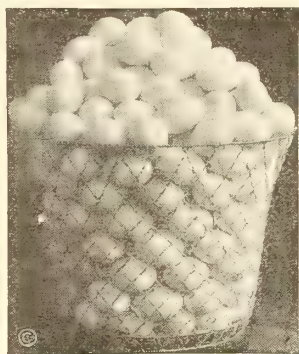

Actual photographs of S. C. Black Minorca 1st prize winners at the Madison Square Garden Show, bred and owned by Frank McGrann, Lancaster, Pa.

The remarkable display of S. C. Black Minorcas at the great Madison Square Garden Show this year was due to the energetic efforts of the members of the American Black Minorca Club, of which Mr. McGrann is president. It was the first time in several years that this club met at the Garden Show and the finest quality of birds that have ever been exhibited were on display.

We have handled a great number of Black Minorcas during the last ten years, but when we say that in all this time we have never handled better birds than those in the accompanying color illustration, we mean just what we say. We have often visited Whatglen Farm of Lancaster, Pa., and the remarkable quality of the birds bred on this farm which we have seen there on each of our visits has caused us to be an admirer of this particular strain.

The fine type of the birds and the great uniformity which runs thruout the whole big flock shows what careful selection and successful mating can produce in a painstaking fancier's hands, and as our color plate is made from actual photographs and not from a made-to-order painting, further comments are unnecessary, as the picture speaks for itself.

L. A. STAHLER, Artist.
American Poultry Journal Pub. Co.

tions in which they can be found at all times we attribute directly to this method of housing.

Black Minorcas will stand the variation of the climate far better than many other Mediterranean breeds. They will do as well in the extreme south as they will way up north where the temperature reaches 20° or 30° below zero. We have very little trouble on our farm with frosted combs, even tho our birds are kept in open air and well ventilated houses.

On a farm, Minorcas do not need to be restrained, while for city or back yard poultry keeping they will be found a great deal tamer than Leghorns or other breeds belonging to the same class. No breed of poultry, single specimens or whole flocks, surpass the Minorca from the standpoint of beauty or utility.

Above all, take the carcass of the Minorca. You have something when you kill one of these birds. It is not necessary to kill a whole flock to make a meal for a good sized family. There is another thing which many people may not have noticed. I defy you to find a closer grained, better tasting meat than that of the Black Minorca. Take a good sized Minorca cockerel and fatten him up for two or three weeks and he will make a meal that will satisfy the most fastidious epicurist.

Another thing which I claim for Black Minorcas is this: The majority of breeds before the public now will have to be double mated in order to produce choice specimens of each sex, which is not necessary with the Minorcas. They breed true to type and true to color from each mating. Of course, attention must be paid to the breeding line and the strain, otherwise the best will deteriorate. By proper selection and observation of variations that occur in a flock one can almost produce anything or get any improvement desired in this breed and as the Minorca is a thoroughbred in reality and not simply a made-up variety like many other newer breeds, it stands to reason, therefore, that a larger percentage of uniform colored and shaped birds will result from a mating than can be obtained from any other breed.

Minorcas are popular the world over. They are bred very extensively in England and some of the best specimens in the United States have been exported to Germany, Africa and many foreign countries where the demand for them is increasing from year to year on account of their all around good qualities. Summing it all up, I say to you, get S. C. Black Minorcas and you will be satisfied with your selection. They will pay their way whether they are kept on the farm or city back lot.

Questions and Answers

Conducted by
Prince T. Woods, M. D.

Breeding Related Stock.

Q. I have a trio of thorobred adult fowls that are supposed to be mated for best results. Am told that I cannot hope to breed fancy quality unless I inbreed and understand that to inbreed right, one must do it carefully. I have prepared a table showing proposed breeding for the next five years, assuming that each adult mating may be expected, barring accidents, to yield good chicks for at least three seasons. What I want to know is if my plan is practical, will it work? Or, will I have to go outside the original trio to get "new blood"? If so, what would be the best way to introduce new blood? What will I have to guard against if I follow this plan of mating and breeding? I intend to trap nest all breeders and keep a record of both sire and dam. All chicks will be toe marked and will be banded,—each group having a letter that will indicate the parentage and the year of hatch. For convenience shall use only add numbers on males and even numbers on females, so that at a glance I will know sex when referring to any record. Of course chicks will only get a letter on band until I can determine sex.

What per cent "blood" does the chick take from sire and dam? Can you figure in percentages of blood or not? That is, would you say that a chick represented one-half the blood of each parent?

There is so much confiction of opinions concerning the evils and the benefits of inbreeding that I would like to have you state what the dangers really are and if it is true that one must inbreed to get quality and uniformity. Here is the table:

TABLE SHOWING BREEDING OF RELATED STOCK.—FAMILY GROUPS IN FIVE YEARS FROM A SINGLE TRIO.

Each mating bred three seasons where possible. And so on indefinitely, using, as emergency arises, such combinations of young and old as may be desired. Never using any but sound healthy stock with abundant constitutional vigor and always balancing the mating to offset minor defects of any sort by strength in the same particulars in the mate. Never breeding brother and sister under 18 months old or full maturity. Odd numbers represent males, even numbers females. Letters indicate year of birth and the parent mating.
A. J. C.
Chicago, Ill.

A. Your letter opens a debatable subject. There are vigorous advocates both for and against close inbreeding. Personally we have always been a bit prejudiced, but, from experiments the past five years, we have not found that carefully conducted breeding of related fowls on the home plant shows any degeneration of the stock. Also observations of Standardbred flocks that have been inbred for twenty or more generations shows only improvement of the stock where the matings have been carefully made and only healthy stock used.

Obviously all poultry of any given variety must be more or less closely related. Otherwise we would not have so much uniformity in type and color and also there would necessarily have been

much greater numbers of the original stock than we know to have been the case. Take any individual and assume that for twenty generations he and each of his parents and direct ancestors were the product of an unrelated pair, and you will find that in the 20th generation back of the parents he must have had 2,097,152 direct ancestors, and that the grand total for the twenty generations would amount to 4,194,300 grandparents of varying degree of greatness, and from any one of them he may have inherited something. Of course we know that there must have been much mating of related stock, as in many varieties we had no such multitude of originals twenty generations back, in fact the "ancestors" twenty generations back of some of our present day popular varieties were comparatively few in number, tho we would be at some difficulty to prove the precise relationship.

No two individuals have ever been produced that were exactly alike,—there is always individuality and each new individual differs in some way from any others that have been produced. That is one of the great wonders of Nature. Closely inbred individuals are more like, possess greater family resemblance, than

IT'S TIME
They know, for that
delicious feed of
Conkey's Buttermilk

MacKay Colony Brood-
er Heater and its double
automatic regulation that
takes care of sudden weather
changes by automatically and in-
stantly opening or closing

Both Bottom and Top Drafts

The bottom draft of the MacKay is below the grate and below the fire, where it should be. The MacKay was the first self-regulating Brooder of its type. It is the one longest in use, that has passed the real test of time.

A Turn of Thumb Screw at the Thermostat gives any Temperature Desired.

MACKAY COLONY BROODER

The chicks do not crowd with the MacKay because the healthy heat is properly deflected first down toward the floor over the backs of the chicks; and then through the room, making the room of a comfortable temperature so that the birds will leave the heater to exercise and keep healthy.

With the MacKay you can brood more chicks in one flock, and you will soon save enough birds to pay for the equipment. A few cents a day for coal, and attention only twice a day is all required for its operation and care.

Illustrated Catalog FREE

Beautiful catalog describes features that you should have on your Colony Brooder. It tells how to increase your poultry profits.

cross-bred individuals, but each has its separate individuality and its points of difference that a keen and close observer will be prompt to note. Even the ova and the sperms which unite to make the fertilized cells from which new animals are produced, possess individuality, or points of difference, visible or not according to our powers of penetration.

Whatever is inherited from the parents, or from ancestors more or less remote, is not handed down in any positively fixed or definite percentages or quantities. Some particularly prepotent ancestor of any generation may hand out some special characteristic at any time. Where the stock has been carefully inbred for many generations the progeny is more uniform and it matters less whether the inheritance (whatever it may be) comes from the parent, the grandparent or some ancestor several generations back. There is an interesting German theory that, while not confined to exact proportions, may be expressed as follows:

The present progeny takes:—

1. One-half its inheritance in more or less known characters from the parents, one-fourth from male and one-fourth from female, or less or more from either, according to prepotency.

2. One-half its inheritance in unknown characters from ancestors, more or less remote.

In other words, the individual is made up of one-half known and one-half unknown and more or less uncertain characters. No one knows how far back the hereditary influence may extend.

Obviously, on this assumption, if we have a line bred stock in which we know many generations of direct ancestors are known to possess desired characters, it does not particularly matter what certain ancestors such are derived from. It is the unknown that upsets our calculations and when we out-cross we materially increase the unknown element and also promote reversion.

Of course "blood" in reference to lines in breeding is a figure of speech, for the embryo makes its own blood some time after the union of the male and female elements, the ovum and sperm, which unite to make the perfected fertile cell in which the new life and new individual develops—and we have always to deal with more or less unknown individuality with each new life. Until we know more about what life really is, we will always have to do a great deal of guessing and theorizing. Always we will have to deal with individuality and individual prepotency.

The more one studies the subject and carefully observes the close breeding of related stock, the more one is compelled to believe that inbreeding, of itself, does not necessarily bring harmful results. But we have to remember that all inbreeding while it intensifies desired characteristics also intensifies undesirable ones. In order to escape from the dangers of inbreeding, from the intensifying of defects and undesired characteristics, we must carefully observe certain rules:

1. Never breed from specimens that have shown serious constitutional disease.
2. Do not breed from specimens that possess serious defects or deformities.
3. Always use only well matured, sound, healthy stock that possess sound constitutional vigor.
4. Always balance minor defects in one parent by strength in these characters in the mate.
5. Make it a point to know both sire and dam in every given mating, and, so

far as possible, know the immediate ancestors on both sides.

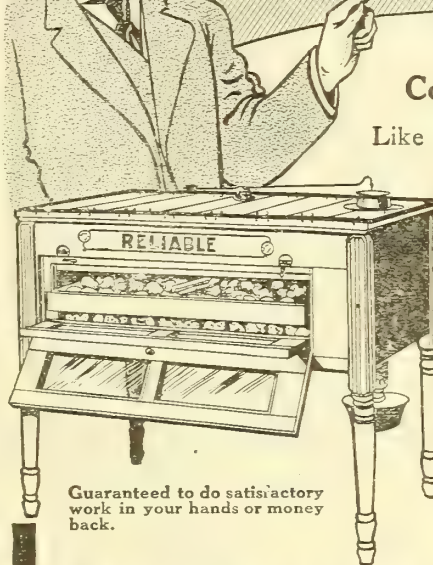

When you know both sire and dam and can observe the progeny intelligently, you are less liable to intensify undesired qualities because you can stop the trouble at its source by abandoning that mating when results are unsatisfactory and you have in your records the key to the condition. You know just which pair produce good and which produce poor results.

Stock is said to "run out" because of inbreeding, to become sterile, to produce smaller eggs and smaller progeny. Such results do come from close breeding of related stock, but it has yet to be proved that inbreeding, *per se*, is the chief cause. It has, however, been pretty well demonstrated that breeding closely related and immature stock will bring about such undesirable results. Full maturity would appear to be the key to the situation here.

Probably none of the smaller varieties arrive at full maturity under 18 months of age, and some the heavy varieties do not reach full maturity until two years old or older. Pigeon breeders will tell you that "color does not set in the blood" until the breeding birds are in their prime, or about four or five years old. By this they mean that breeding birds do not give best results in color of progeny until in their prime as breeders. It is quite probable that with poultry we could breed better color by breeding specimens that are from three to five years old. In fact it is likely that we would get much better results in all desired characteristics if we would breed only from specimens in their second season or older, provided all possess strong constitutional vigor, health, and have not been forced for heavy egg yield.

Your plan for breeding as shown by your table is interesting and it will probably work as well as any other if you observe the rules we have suggested. We have heard breeders say that "inbreeding is breeding the progeny back to sire or dam and likely to produce trouble" and also that "line breeding is the mating of brother and sister, each having half of the blood of each parent, and that in so doing you do not increase the percentage of original blood." While that theory "listens well," it is just as well to take it with a grain of salt. Such data as we have does not show that heredity deals in precise percentages, except possibly in rare instances of some special breeding of certain types and colors. So far as we know the precise relationship of the mated stock makes comparatively little difference, provided both sides of the mating do not possess similar defects or tendencies to similar faults or undesired

34 Years a Proven Success

Merit Always Counts in the Long Run

Like the big oak tree that grows from an acorn, the Reliable Incubator factory has grown from a small beginning 34 years ago to the biggest and most modern incubator and brooder factory in the world. Naturally, I can make and sell a high class incubator for less money when I make 500 complete machines a day.

This year I am going to give my customers the benefit of my superior manufacturing facilities. I am going to make it possible for every man, woman and child to own

The World-Famous

Reliable Incubator

At a Record-Breaking Price

The machine I offer you now at a price that will astonish you is the same "Old Reliable" Incubator which has won over 1,200 prizes at competitive exhibitions in this and foreign countries. In use today at U. S. Government Indian Schools and Experimental Stations, numerous State Experimental Stations, and by hundreds of thousands of successful poultry raisers. Everywhere the "Old Reliable" proves successful.

Built of the finest, thoroughly-seasoned and everlasting California redwood, with double walls thoroughly insulated; top and bottom tongued and grooved; has double doors and roomy nursery; all-metal lamp.

The Reliable maintains correct hatching conditions at any altitude, in any climate, at all seasons of the year—a cold weather hatcher that produces a strong, healthy chick from every egg of proper vitality.

Let me give you also my special low prices on my Reliable Bantling Hot-Air Incubators—leaders in quality and low price.

I can give you only a few general facts in this space. I want to send you my Free Poultry Book, giving full descriptions, besides many pages devoted to facts on poultry raising. Write today for catalog and my low price. It will save you money.

J. W. Myers, President

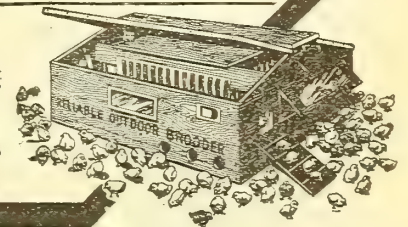

Reliable Incubator & Brooder Co.

Box A-1

Quincy, Illinois

Double Heating System is an exclusive Reliable feature; copper hot-water tank and hot air pipes extending entire length of egg-chamber; perfect regulation of heat, moisture and ventilation.

Reliable Brooders are built with the same care as Reliable Incubators. Hot-water or hot-air heat. Hovers the chicks better than the hen.

Norwich-Feeding Proven Better Than Hand-Feeding

No one disputes the fact that the use of Norwich Automatic Feeding Appliances reduces labor and saves feed. Here is official proof that these machines also produce better results than hand-feeding.

All layers in the four completed North American Laying Competitions have been fed by Norwich Automatic Feeders; in the two Connecticut Competitions practically the same ration was used but was hand-fed. Now note the average production of the entire flock by years:—

North American Competition:—154; 156; 170; 165
Connecticut Competition:—144; 151
Average N. A. Competitions, with Norwich Feeders:—167½ eggs per hen
Average Connecticut Competitions, hand-fed 147½

Proven gain from use of Norwich Automatic Feeders, 20 eggs per hen.

With eggs valued at 3 cents each, this amounts to 60 cents per layer, or \$600 for a flock of 1,000 hens.

TEST NORWICH AUTOMATIC EQUIPMENT AT OUR RISK

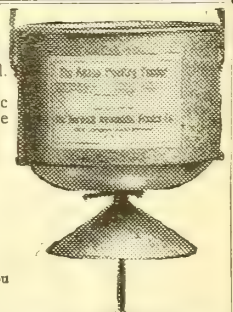

Use one or many of our feeders for 30 days. If you are not satisfied with results, return feeders and your money will be refunded. Can you afford to hesitate when we offer to prove at our risk that you can secure better results?

Most live dealers in poultry supplies will furnish Norwich Equipment on the above terms. If necessary we will ship direct on your order.

SPECIAL OFFER Our new Apaco Feeder, 12-quart capacity, is similar in action to the Norwich Automatic Feeder, but is specially designed for owners of small flocks. For One Dollar we will deliver an Apaco Feeder to any point in the U. S. east of the Mississippi; \$1.30 beyond that point. Order today and feed your layers right!

Eggs-ANDALUSIAN-Eggs

SINGLE and ROSE COMB Special Matings, \$3.00 per 15 Farm Flock - 2.00 per 15

Twenty-four years breeding this variety with the many prizes won at the "Big Shows" should convince the most skeptical that you should send your order for stock or eggs to

F. L. GARNETT, 19021 Nottingham Road, Cleveland, Ohio

characters, and provided both sides of the mating are sound and healthy.

If you always breed from fully matured specimens, breed always for health and sound constitutional vigor, never breed from birds that have been sick or that are out of condition, and try to balance minor defects with strength in one mate, we believe you will get excellent results from your plan. We do not believe you will have to go outside your line for "new blood", but if for any reason you should, we would recommend that you secure a good yearling or two-year-old female for the purpose to mate with your best male and that you use only her pullets for breeding, discarding the cockerels.

Water Supply.

Q. (1) Would you use a large size automatically heated water fountain for fowls, the fountain designed to be filled

First prize Buff Orpington cockerel, Greater Chicago Show, January, 1915. A bird of wonderful color and type. Bred and owned by Struble Buff Orpington Farm, Bascom, Ohio.

only once in several days? Do they keep the water clean enough and fresh enough?

A. (1) Some folks use them and appear to find them satisfactory. Personally, we have no use for water heaters or heated water for our poultry. Our birds have fresh, cold water direct from the spring. It freezes and they pick a drinking hole in the ice on top. When there is clean snow available they get snow in place of drinking water and appear to prefer it.

Q. (2) Would it be a good plan to use a vinegar barrel for several days' water supply and pipe it to the drinking cups to keep same always filled? Would not the water be stale and warm in summer?

A. (2) We keep fowls chiefly to get good eggs for food purposes and we prefer to have them get their water reasonably fresh. The egg is largely made up of water. A good drip system from a flowing spring or from a large reservoir is one of the best ways to supply drinking water. We would not use the barrel plan if we could supply good spring water fresh daily.

Q. (3) Can mites be kept off a roost by covering the roost with sheet metal at the points where it rests on supports?

A. (3) No. Mites will breed in the

dust seams of the metal and between metal and wood. Paint the roosts and supports with crude petroleum every month or two. Be sure to let it dry in before fowls use the roosts.

Q. (4) Can you recommend to me any particular style of caponizing instruments? I want to try caponizing this summer and no one around here seems to know anything about it.

Kewanee, Ill. C. C. C.

A. (4) There is a wide difference of opinion among operators concerning the various kinds of caponizing sets. Nearly every operator has his particular assortment of tools. Personally we like the J. H. Curtiss set as well as any, but the Chinese, Beuoy, Pilling and Greiner outfits all have their advocates. You can buy a set of tools as low as \$2.50 and as high as \$10. A good practical outfit suitable for professional use will cost between \$4 and \$5. If you are going to learn caponizing, the various books on the subject do not cost much and it would be well to look them all over before you buy tools.

Don't Look Like Standard Pictures.

Q. I bought two hens and a rooster, Black Langshans for \$10. I thought they were all right, as they lay fine, have nice red combs and seem very healthy, but my neighbor says I am "stung." He showed me a book, the American Standard of Perfection, and I can see now that my chickens do not look just like the pictures in the book. Should I keep and breed these chickens or will you help me to get my money back? I don't want to be skinned, but these chickens look nice and are tame, just like pets. The man who sold them to me called them a mated trio and says they will breed good. The rooster is a nice shiny black that looks green in the sun, but the hens are sort of dull black and their tails don't stand up so high as the hen in the picture. There is a little gray at tip of wing feathers.

Richmond, Va.

H. T. D.

A. We do not recall that we ever saw any Langshans that looked exactly like the illustrations in the Standard. The Standard illustrations and descriptions are supposed to represent *ideal* show specimens. They do not represent breeding specimens and a lot of the pictures do not faithfully picture any fowl that ever wore feathers. Would not pay any attention to what "neighbor" says. There are lots of folks in this world whose chief occupation seems to be trying to make other folks dissatisfied with what they have or to try to make them think they have been cheated.

If you could secure a pair of Black Langshans that were even fair likenesses of the Standard pictures, it is quite likely that \$150 would be considered a low price for them.

We would breed that trio of Langshans. It looks to us as if the breeder had tried to give you exceptionally good value for your ten dollars. In fact, we would be willing to take that trio off your hands at the price you paid, if they are in good order and as you describe

White Orpingtons

Eggs from my Big, Magnificent, Massive high grade stock—with wonderful egg producing records, \$3 and \$5 per 15. If you want eggs from really fine Orpingtons and great layers—you will book your orders now. Supply limited—satisfaction guaranteed. Few choice birds for sale at exceptionally low prices. EDGAR F. ALDEN, Winnetka, Ill.

Your Hens Need It!

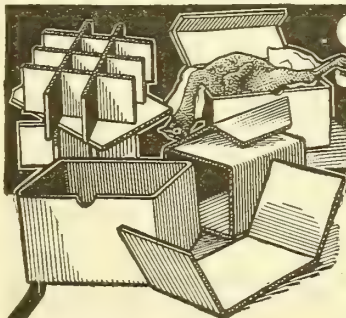

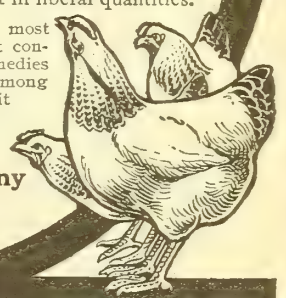

They need Pearl Grit just as badly as you need teeth. They need it to help grind their food—to make it more digestible. Pearl Grit is the best, hardest, cleanest and sharpest grit you can buy. Helps hens quickly pass the molting season—helps them lay more eggs—makes them stronger, healthier, better birds.

Pearl Grit

Serves a double purpose. Its benefits to the fowl are two-fold. Besides helping the digestive organs, it possesses great shell, egg and feather-making properties. Egg shells contain a considerable amount of lime while the egg itself contains, among other substances, sulphur and carbohydrates. All of these ingredients are found in Pearl Grit in liberal quantities.

We have just issued one of the most handsome poultry booklets ever seen. It contains simple instructions and remedies for many of the common diseases among chickens. It also tells why Pearl Grit is such a practical food. Send for a free copy today. A postal will do.

them. We believe that to get best results with that cock bird the hens should be a rather dull black.

If you get a well mated trio of good healthy, vigorous stock, designed for utility purposes and of fairly good type and color, for ten dollars, you get about all you pay for.

Don't let a tiny bit of gray at tips of flights worry you. It is only a defect and some of the winners at the big shows this winter showed this defect.

Frozen Foot.

Q. I have a Barred Rock cock that has frozen one foot. How he did it I don't know, for his comb and wattles were not touched and he was not out in snow. I fear foot was frozen a couple of days before I noticed it. He has lost his middle claw and toe is badly swollen. Thawed the foot in cold water, cleaned it and gave it a rubbing with camphorated vaseline, which was only thing handy, and I bound it up. This morning it was as warm as other foot, but there was a big blister on ball of foot which had begun to discharge. I made a large opening and let all fluid out. I also gave the foot a rubbing with turpentine and bound it up again. Can the foot be saved or will he have to be killed? He gave me some dandy pullets last spring that have been laying all winter. If there is a chance for him would like to have him have it.

Harvey, Ills.

G. V. A.

A. Your treatment is all right. Keep it up. "Watchful waiting" is about the only course you can pursue. He may come out all right with the loss of a toe or two, but even if he loses the foot, you may be able to breed him to a few good hens if he makes a good recovery and gets a good stump to injured leg. We had a Cochins cock that lost a foot and he bred all right, so a Barred Rock ought to be able to stay on the job. He may have bruised or injured foot, or had a tight leg band that resulted in the freezing; tho why some suffer from frost bite and others do not, or how and why a particular part freezes when apparently more tender parts do not, is a singular fact for which we have yet to find a satisfactory reason.

Investigations.

Q. Since writing you, I have written to Mr. A. and purchased 6 cockerels. "bred direct from champion pen." Can you obtain from some one you know a frank statement concerning A's stock and his standing in the community?

Also find enclosed correspondence with Mr. B., who is a classified ad man and who claims to have this same champion stock, offers birds bred direct from certain hens, but who, I have been assured,

THE SUCCULENTA CO. P. O. Box 405-1 Newark, N.J.

"A Revolution in Egg Production." See page 449.

never bought either eggs or stock from these champions. Either there is confusion or somebody lied.
Arizona. W. O.

A. We are holding the correspondence and endeavoring to get more complete information about Mr. B. If he is proved to be misrepresenting his stock he will have to take his advertisement out of this magazine.

As to Mr. A., our representative visited him once only. He has a nice little plant to which, presumably, he devotes his whole time. He has letters to show that he bought champion pen stock. He has good references and is well thought of in his home town. With a very few exceptions his flocks are in excellent condition and of good quality.

We look up, as far as possible, all cases reported to us and endeavor to be fair to both sides and to adjust any differences without undue publicity. Generally we find that in every misunderstanding there is right on both sides. Frequently alleged dishonesty is merely difference in viewpoint, a simple misunderstanding, or plain ignorance of one or both parties.

Personally, we do not think much of this investigation business that some publications are pretending to do. In the first place, we do not believe that it is being done honestly and it savors of practices that bear an ugly name. Secondly, we believe that unnecessary publicity in such cases does more harm than good,—injuries the innocent more than the guilty. Thirdly, we do not see how anyone can expect a great deal in Standard points at prices of \$2 to \$5 per bird, when any birds that really look like the Standard pictures—if such birds ever are or will be produced—would be worth \$100 each, or, at least, would bring that price. Fourthly, it is our opinion that any man who does a crooked business is certain to hang himself sooner or later, and that any man who does not give one hundred cents value for one dollar cannot stay long in business. Fifthly, if it is true that investigations are in order, it would appear that all breeders, big and little, should be investigated, instead of confining the public investigations to non-advertisers or small advertisers. If it is true that an accounting is necessary, then it should cover the whole field, and that will be some job. Meanwhile it is just as well to remember that, apparently, it is difficult to find any two people who view poultry values alike.

In so far as we are able, we are glad to serve you and we do not intend to play any favorites. Whether you are an advertiser or a non-advertiser you will receive the same courteous consideration in our columns.

Sunflower Seed—Lice—Mites.

Q. (1) I had a lot of sunflower seed and fed it freely to layers two years ago. They seemed to relish it and it made them lay too. Do you approve of feeding large sunflower seed?

A. (1) As a variety food in cold weather and in the fall at moulting time, sunflower seed is excellent. We would

1915 Revised Edition

American Standard of Perfection

This great book has just been revised and it gives you the correct Standard Shape, Color and Weight of every recognized variety of poultry, including the new breeds that have been admitted. You will also find the disqualifications of each variety.

YOU CANNOT

raise, mate, exhibit or sell fowls intelligently without it. It contains ideal illustrations of the different varieties of fowls photographed from living models and gives the correct color of plumage on your birds. It's your guide to success in the poultry business. No one can breed fowls for exhibition without a copy of the *American Standard of Perfection* as a guide, and it is the only book of its kind published in this country; authorized, copyrighted and published by the A. P. A. Price postpaid, cloth, \$2.00; leather, \$2.50.

SPECIAL OFFER

American Standard of Perfection (cloth) **\$2.50**
and American Poultry Journal for 1 year

If you want leather binding add 50 cents to this price. Canadian subscribers add 25 cents per year for postage; foreign subscribers add 50 cents per year for postage.

AMERICAN POULTRY JOURNAL PUB. CO.

Chicago, Illinois

not feed it too freely, as it is quite fattening. Five pounds in 100 lbs. of scratch grain is a very liberal allowance and generally not over one pound is used.

Q. (2) Please tell me of a good lice killer to use on roosts and one to use on hens in cold weather.

A. (2) Nearly all of the liquid lice killers are good to use on the roosts. See answer No. 3. A mixture of one-third blue (mercurial) ointment and two-thirds petroleum jelly, well mixed, applied in very small amounts just above and below the vent and under wings next to body, is a satisfactory remedy to get rid of body lice on fowls.

Q. (3) Fowls have been very lousy all winter. Would like to know if coops that have been left out in the cold all winter will be free from mites and safe for young chickens in the spring? Will the severe cold kill the eggs of lice and mites?

Torrington, Wyo.

C. H. P.

A. (3) The cold will not affect the parasites or their eggs. When they thaw out they will be just as active as ever. Thoroughly clean the coops and paint them with crude petroleum, inside and out, and get it well into cracks. Let coops dry well before using. Same is good to use on roosts. If you mix with a gallon of kerosene one pound of crude naphthalene flakes, you will find it a good lice and mite killer to paint roosts or coops. Be sure it has dried into wood before fowls use the roosts.

Spotted Liver.

Q. What is the trouble with my chickens and what can I do for them? They are sick and sit around most all the time and I have lost several. There are white spots on the liver and liver looks like fish eggs. They are fat and have good appetites.

Baker, Ore.

J. S. S.

A. Trouble may be tuberculosis or may be one of several infectious intestinal diseases. Would send fowls to nearest State Agricultural Experiment Station for examination and diagnosis. It is probable that the best and safest remedy would be to get rid of the whole flock; thoroughly clean and disinfect your poultry houses and runs and make a fresh start with sound healthy stock. Better still, start your new flock on ground that has not been used for poultry and house them in open-front buildings. The "fish egg" appearance of liver is an almost certain indication of tuberculosis.

Black Feathers in Barred Rocks.

Q. (1) I have Barred Plymouth Rocks. I notice in my flock, and in others as well, that the birds show one or more black feathers. What per cent of a cockerel-bred line do not have these black feathers? Do you consider that this is evidence that the stock is not well bred?

A. (1) Even the very best Barred Plymouth Rocks will sport some black feathers. We have yet to see a specimen in natural condition that failed to show one or more black or black splashed feathers. See the excellent series of articles on Barred Plymouth Rocks by C. H. Latham, now running in A. P. J. and which began in January, 1916, number. The black feathers are defects, but you will find them in the best bred stock in the country.

Q. (2) I supposed I bought good stock to start with and have added new

140

CHICK BROODER

Built for Service and Lasting Qualities

THE Hatching Contest conducted by Missouri Valley Farmer and Nebraska Farm Journal were the two biggest Hatching Contests ever held in the world. The IRONCLAD Incubator is the only incubator that for two years in succession won in these Big Contests. The last contest was won by Mrs. C. F. Merrick, Lockney, Texas, with her Ironclad Incubator. If you are going to buy an incubator this year, it will save you time and money to order an Ironclad first. We prove its merits—tell you how they're made and what they're made of right at the start. Read Mrs. Merrick's sworn and witnessed statement.

WE GIVE YOU 30 DAYS TRIAL

You have nothing to risk when you buy an Ironclad Incubator. We will send you machines—let you use them 30 days—urge you to compare them with others in quality of material, hatching ability, workmanship and price. Some manufacturers don't tell you how their incubators are made. *We do.* We want you to know. We are proud of the quality and if you don't find them satisfactory send them back—we'll pay the freight charges and return your money. You are absolutely safe. We do as we advertise, and tell you exactly what to expect.

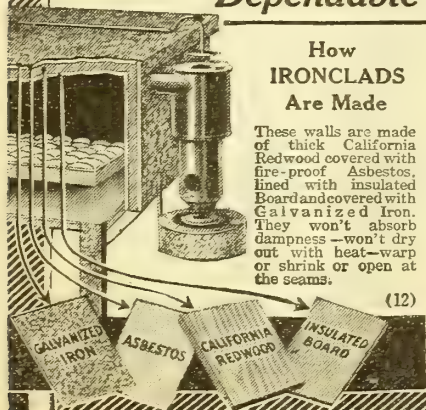

IRONCLAD INCUBATOR CO., Racine, Wis.

Gentlemen:—I am writing to let you know that I won in the Big Hatching Contest held by Missouri Valley Farmer and Nebraska Farm Journal. I placed 148 eggs in my 140 egg Ironclad incubator and hatched 148 strong chicks. I also took off two more perfect hatches during the season and I wish you could see my chicks; they are doing splendid. My success has been perfect. I have examined quite a few incubators and I like none so well as the Ironclad. Respectfully yours, Mrs. C. F. Merrick, Lockney, Texas.

10 YEAR Ironclad GUARANTEE

Ironclad Incubators are made of Genuine California Redwood; on top of the Redwood we place a lining of fire-proof asbestos. Outside covering is galvanized iron; inside is lined with insulated board. When an incubator is constructed of material of this kind, it gives you the strongest and most durable incubator that can be made—a machine that will not warp or shrink or open up at the seams, as every joint is lapped over with our galvanized iron covering, giving you an incubator that will last a lifetime.

Don't Class This Big All-Galvanized-Covered Dependable Hatcher with Cheaply Constructed Machines

How IRONCLADS Are Made

These walls are made of thick California Redwood covered with fire-proof Asbestos, lined with insulated Board and covered with Galvanized Iron. They won't absorb dampness—won't dry out with heat—warp or shrink or open at the seams.

(12)

Ironclads are not covered with cheap tin or other thin metal and painted, like some do, to cover up poor quality of material. Ironclads are made to last, and they are shipped in the natural color—you can see exactly what you are getting. *Don't buy an incubator until you know what it is made of.* Note these Ironclad specifications—making Ironclads the highest quality machines ever sold at the price we quote. Genuine California Redwood, triple walls, asbestos lining, galvanized iron covering. Galvanized iron legs, large egg tray, extra deep chick nursery—hot water top heat, Tyco's Thermometer, glass in door. Complete instructions are sent with each incubator, and every Ironclad is guaranteed for 10 years. All of these advantages and others fully explained in our free catalog. Write for it today or order DIRECT from this advertisement and SAVE TIME.

F. S. CLAUSEN : : OCONOMOWOC, WIS.

cockerels each year from reputable breeders. Still they throw these black feathers.

A. (2) It is a mistake to add new blood by breeding a cockerel of a different strain each year. It is a wonder that the proportion of off colored feathers is not greater where you make such practice. To get best markings you will have to breed your stock in closer family lines. If on going over a good Barred Rock we failed to find one or more off color feathers, we should suspect that some one had seen them first and pulled them.

Q. (3) A few of my chicks come with twisted wing feathers. What is the cause of this? J. Z., M. D. Flanagan, Ill.

A. (3) Atavism. The Barred Rocks have Asiatic blood in some ancestral lines. Twisted wings are quite common in Asiatic fowls and some ancestor has handed this tendency, which is a strong one, down to your flock. Don't breed

birds with this fault, it is a difficult one to get away from.

Red Sussex—Dark Cornish.

Q. (1) Is a Red Sussex cockerel supposed to have white feathers on lower part of his wings?

A. (1) Defective specimens do show such off color but it is a disqualification under the Standard. Black and red are only colors in primary and secondary wing feathers and when the wing is folded only the red should show on the surface. See the detailed description in Standard.

Q. (2) Should a Dark Cornish cockerel have spots of brown on his back? Should he be short or long in legs? J. H. B.

Rockaway, N. J.

A. (2) Back should be greenish-black intermixed with dark red, the black predominating. Thighs should be of medium length, large and muscular. Shanks should be short and stout.

Chicken-Pox.

Q. About two weeks ago I noticed a brown scab on top of White Wyandotte's comb. Thought it was only caused by other chickens pecking at it. About four days later the bird died. From this time I noticed others with the same symptom. Sometimes the scab

formed near the eye. It seems to be very contagious. Several have died. Kingston, Ont. J. H. S.

A. Trouble is probably chicken pox. The following simple treatment is recommended by a practical poultryman as giving prompt results in most cases. Withhold all food for 24 hours. Then give mash containing 10 per cent flowers of sulphur. Repeat for three days. At this time it is claimed that there will be marked improvement and the pox sores will begin to dry up. Any cases not showing improvement should have treatment continued for three days longer. While the amount of sulphur given is far in excess of the amount that can be assimilated by the fowls, the remedy is simple and inexpensive and well worth testing.

We have had very satisfactory results from use of calcium sulphide in the drinking water. In a quart of drinking water dissolve as much calcium sulphide as will just cover a silver dime, and allow no other drink.

Giving Epsom salts in the mash once a week, alternating with flowers of sulphur given three days after the salts, is claimed to prevent and cure chicken pox. The dose of Epsom salts is one teaspoonful to six birds, given in the mash. The dose of flowers of sulphur is one tablespoonful to a quart of mash. Used as a preventive the salts and sulphur should be given alternately twice a week for one month, both Spring and Fall.

As a local application to pox sores, use carbolyzed petrolatum.

Oats.

Q. (1) What is meant by clipped oats?

A. (1) Oats that have been machined to remove a part of hull and the sharp tips.

Q. (2) Should oats be hulled before using in the dry mash?

A. (2) We use ground oats or rolled oats and do not sift out the hulls.

Q. (3) What kind of material makes the best poultry litter?

A. (3) Any good, bright, clean straw. Do not make it too deep, as it attracts moisture in bad weather and becomes damp; packs down easily and may spoil or mould. Musty or mouldy litter is dangerous.

Q. (4) Would you advise the use of corn husks as litter? A. H. C. Virginia Mills, Pa.

A. (4) If cut small in a shredder they make good litter. May be used without shredding, but do not like them as well.

Clumsey Cockerel.

Q. What can I do for a dandy cockerel that has difficulty in serving. He is very slow and when he makes an attempt falls off about four times out of five. Would be glad to know of any feed or treatment that will bring him round all right. F. J. K. Quincy, Ill.

BROODER

You Know

the most coveted prize, the one that all breeders strive for? Well, that prize was captured at Boston, 1916, by TANTALIZER, 1st Cockerel and Champion

Barred Rocks

In addition to this my birds won 3d cockerel, 4th pullet, color special, 3d cockerel-bred hen, 3d cockerel-bred pullet, 4th cockerel, bred pen. Think of it! This wonderful win with only 8 entries. Also consider that unlike other Eastern shows, the cockerel class was composed of 20 different exhibitors. Have a few brothers and sisters of these wonderful birds at prices within your reach; also eggs from these winners. Send for complete list of our winnings.

W. W. Carpenter, E. Providence, R. I.

"Tantalizer" is a grandson of Boston King.
1st cockerel, Boston, 1913.

WH. WYANDOTTES—REGAL STRAIN

Won 1st and 4th Cockerels, Illinois State Show, DeKalb, January, 1916. 1-23 Ckl. at Batavia, Dec. 1915; also second best bird in show. Stock. Eggs for Hatching and Baby Chicks for sale.

WHITE WYANDOTTES
BUFF ORPINGTONS

"Champion Layers"—We BRED THEM

WHITE WANDOTTE
Official Record. 265 Eggs

These five White Leghorn pullets won the silver cup and seven medals in the last North American Laying Competition. This pen produced 1,139 eggs, the highest official record made by any pen of five hens bred on American soil. Individuals produced 251, 250, 224, 222 and 192. Remember, we bred these

COMPETITION WINNERS

which defeated the Leghorn entries of Tom Barron and Ed. Cam. We still own them as well as hundreds of other heavy-layers, carrying the same blood. A thorough-bred English cockerel sired a pullet that broke all records, making an official record of 314 eggs, in North American Egg Laying Competition, 1915. If you want Leghorns that lay, if official egg-records mean anything to you, you should secure our strain. Our Reds, Wyandottes and Orpingtons are also wonderful layers. We have many individuals which hold remarkable official records and this bred-to-lay blood is strong in every bird in our great flocks. We supply

Eggs for Hatching, BABY CHICKS, Early Hatched Cockerels, Breeding Stock

BUFF ORPINGTON
Record, 272 Eggs

at very moderate prices. And our customers know what they are getting because we have demonstrated the quality of our stock thru consistent winnings at the great public laying competitions.

Write today for copy of

"THE STORY OF THE 200-EGG HEN"

which contains pictures and records of our competition winners, plans of trap nest, feeding formulas and other valuable information which will help you make your flock more productive and profitable. Price 10 cents; deducted from first order.

Winners wherever shown, including the largest Mid-West shows. Grandest lot of young stock we ever raised. SPECIAL SALE OF BARRED ROCK COCKERELS AT A BARGAIN. Eggs in season. All stock shipped on approval. Every bird guaranteed.

C. W. LOCK 733 Haish Ave. DE KALB, ILLINOIS

A. Let him run with a few yearling or two-year-old hens. Keep them in a yard where there is no other male to interfere or no one to pretend an attack from other side of wire fence. Keep the flock well fed and in condition and let the bird alone. He will be all right if he is any good at all. Probably all he needs is a chance to mature.

Feather Pulling.

Q. I have a fine pen of Rhode Island Reds that have the habit of pulling feathers, over which I am greatly disappointed. Please advise me. F. N. Chicago, Ill.

A. Give yor birds more room and encourage them to exercise by giving part of their grain in clean litter. Feed some fresh green food freely. Close confinement, lack of greens, too little exercise, also crowding, are common causes. A little powdered aloes mixed with lard and applied to the feathers about the picked parts will often help to stop this habit. "Poultry bits" are furnished by supply houses. These prevent closing of beak, but do not interfere with eating, and so discourage feather pulling. It is difficult to break this habit.

White Diarrhoea.

Q. It is said that the germs of white diarrhoea are in the eggs. Does the male bird carry the germ in his system? Can the chicks become infected thru the male? Is there any way of telling by the appearance of the old hens if they carry white diarrhoea germs? Is there any remedy that anyone could give little chicks just hatched to prevent the disease? E. J. H. Amelia, O.

A. White diarrhoea is believed to be transmitted thru infected ovaries of the hen. It is not known whether the male can carry infection or not. We do not know of any way to tell by the appearance of a hen whether she is infected or not. Some believe that a blood test will determine whether or not the hen carries infection. We have engaged a lot of eggs for this season, for experimental work, from hens which the State Station has tested and condemned as carriers of white diarrhoea infection. After we hatch these eggs and try to raise the chicks, we expect to know more about the value of this particular test.

The best way to prevent the trouble is to breed only from hens that appear in every way to be sound and healthy. Hatch the eggs properly, give the chicks good care. Do not feed the chicks too soon after hatching. Keep them in clean brooders and give them only good sound wholesome food. With proper attention given to the breeding stock, always breeding for health, good hatching and cleanliness and good management during brooding—feeding no spoiled food—we believe the danger is slight.

Rocks or Brahmas on Small Lot.

Q. I have a lot 50x75 feet, where I intend to raise chickens and will Winter about 50 hens and pullets. Shall use an open-front house. I like the White Rocks and the other side of the family would rather have Light Brahmas. We would like to have your opinion as to which would be best for us for utility. We will try to raise 200 chickens and want the best for Winter eggs. Salina, Kans. H. W. W.

A. Either White Rocks or Brahmas

will give you good table poultry and a good yield of Winter eggs. It takes a little longer and costs a little more to grow Brahmas to full maturity, but you get a bigger bird. Properly handled the Brahmas will lay just as well as the Rocks. On a small lot you will find it easier to handle Brahmas and to keep them confined. Brahmas are disposed to be rather quiet and to stay at home—a 3-ft. fence will keep them in. White Rocks are great wanderers and foragers and easily learn to climb fences. If they have never been allowed to range you can keep them inside of a 4 or 5-ft. fence very comfortably. If they have had free range you will find that they make no difficulty about walking up and over a 5-ft. fence. Any active fowl is much more likely to develop bad habits in confinement than is the heavier and more quiet bird.

Peanuts for Poultry.

Q. I have a chance to get chips from roasted peanuts cheap by the hundred pounds. Are they good for poultry? How should they be fed? How much?

First prize Columbian Wyandotte cock, Greater Chicago Show, January, 1916. This win made with but one bird entered in the class. Wonderful specimen. Bred and owned by Jos. Hauk, Waukegan, Ill.—F. D. R.

How would they affect egg production? Cincinnati, O. C. W.

A. We have never fed any to poultry. Would try them in scratch grain, about 10% of whole mixture. Being rich in protein and oil they will probably prove a good food.

Cholera.

Q. What are the symptoms of chicken cholera and what causes it? Is there a cure? Are pullets subject to it? What is a good preventive? Creston, S. D. R. F.

A. Symptoms: Foul smelling diarrhoea with yellow coloration of urates (part usually white and lime like); frequent discharge from bowels; yellow urates becoming greenish; comb and headgear usually pale; bird is weak on legs and walks with staggering or trembling gait; crop usually full of food, due to paralysis and inability to digest food; all symptoms follow rapidly; bird generally falls over and dies in convulsions in from a few hours to a few days after first symptoms are noticed.

Poultrymen, Increase the Value of Your Flock

in poultry yard and showroom. Infuse into it winning Wilburtha blood. Our birds are bred to lay, to pay, and to win. Our strains have been improved to the highest degree, for utility and show purposes, by careful selection, mating, and every good practice known to us, as experts of many years' experience. Nowhere have we spared a dollar or an ounce of labor to attain the highest standard. Every feature of our model plant contributes to the health and excellence of our winning birds—from the best type of buildings, to the best disinfectant to keep them bright and sanitary. Fine birds, well cared for, win for us. They will win for you, too. Pay us a visit and make your own selection of the famous

Wilburtha

S. C. White Leghorns

—perhaps the greatest of our strains. Over 3000 birds, choicest specimens, both male and female. Bred for utility and exhibition purposes. Large, early maturing, and heavy layers. Chicks mature rapidly. Excellent table birds at exceptionally early age. Our S. C. Whites are always in the ribbons. They won at

OWEN FARMS

**Buff and White Orpingtons
White Plymouth Rocks
S. C. Rhode Island Reds
White Wyandottes and
S. C. White Leghorns**

Have proved they have no superiors. They have made good in the show room, the breeding pen, the laying pen. They have demonstrated that they live, grow, lay and pay.

1916 Matings

Are better and stronger than ever before. Never before in the history of the Farms have the minor details been so perfect in every male and female as they are today. My new Mating List will give you a careful word picture of every male used in my best pens and a general description of all females. Every mating in White Plymouth Rocks, White Wyandottes and White Leghorns has been put together by the master hand of Frank H. Davey. Every mating in Buff Orpingtons, White Orpingtons and S. C. Rhode Island Reds has been made by Maurice F. Delano. Our combined experience in successfully breeding strong, healthy, winning birds amounts to nearly SIXTY YEARS. This experience means much to us and should mean something to you.

First Prize CkL., New York, 1914

1916 Mating List

Tells the story and will be ably seconded by my grand new Catalog, which will be out early in March. You cannot afford to purchase eggs in my varieties without sending for these books and carefully considering Owen Farms quality. My customers have won highest honors all over the country with chicks raised from my eggs, and 1916 quality is better than ever. Owen Farms guarantee is original, and different, and really means something.

Eggs from the Best Matings in America
\$10 per 15. \$30 per 50. \$50 per 100

Eggs from Grand Good Matings
\$5 per 15. \$15 per 50. \$25 per 100.

No Reserved Matings. If you must have eggs from special pens they are yours at prices stated in Mating List.

1915-16 Winnings:

BUFF ORPINGTONS

At Madison Square Garden, New York, in the Best Quality Buff Class Ever Cooped

1st and 4th Pen; 2nd and 4th Cock; 1st and 5th Hen; 2nd and 4th Cockerel; 1st Pullet, and 1st Collection by a very wide margin. The TENTH OUTSTANDING BUFF WINNING during the past thirteen years Owen Farms birds have made at this great show.

WHITE ORPINGTONS

At the Great Palace Show, New York

1st, 2nd, 4th Cock; 1st, 2nd, 3rd, 5th Hen; 1st, 2nd, 4th Cockerel; 1st, 5th Pullet; 1st, 2nd, 3rd Pen and ALL SPECIALS. The strongest team we ever showed. Our customers won at the other leading shows.

First symptoms may be noted at any time from three days to two weeks after infection. Disease is a germ disease. Best means of prevention is to quarantine all birds brought onto plant for two weeks before admitting them to flock and to forbid visitors in the poultry yards or houses. Treatment after disease has started is generally unsatisfactory. Kill affected birds without drawing blood and burn the carcasses. Burn all droppings and litter. Clean up and thoroly disinfect the premises. Valuable specimens can be cured by careful treatment if discovered in time, but the disease is so rapidly fatal and the first symptoms so easily overlooked, that when the sick fowls are discovered it is generally too late for effective treatment.

Double Yolked Eggs.

Q. I have a White Leghorn pullet six months old and she has been laying for past three weeks. Her first two or three eggs were normal, but for past week she has been laying a double yolked egg every other day. I have had four such eggs from this pullet and one from another in the same pen. What shall I do?

Merritton, Ont.

C. W.

A. Slight abnormality of egg organs of pullets just becoming established in laying are not uncommon. If the bird was ours we should simply await developments and not worry about it. It may be that she is one of the gluttons of the flock and is stuffing herself too much. You can remove her from flock and feed her more sparingly and give greens freely.

White in Ear Lobe.

Q. I have a nice cockerel with one ear lobe partly white and I would like to know what to do to make it red again. This is a valuable cockerel and first-class in every other way.

Akron, O.

P. H. J.

A. If the white came there naturally you cannot help it much. If friction and gentle massage will not bring the color back to stay, would not waste time on it. Get a bird that is naturally red and stays red.

Dry Mash Formula.

Q. I have a small flock of fifteen Black Minorcas. I feed the following scratch food: Corn, 50 lbs.; wheat, 25 lbs.; oats, 15 lbs.; buckwheat, 10 lbs. This costs me \$2.25 per hundred pounds. Is it all right as it stands? I have been feeding a commercial dry mash, but the birds do not like it. Will you please give a good dry mash formula, parts by weight, total not to exceed 100 lbs.?

Brooklyn, N. Y.

E. V. R.

A. The scratch grain is all right; for summer feeding would reduce the corn 10 lbs. and add same quantity of oats. For a dry mash the following will make you a good one and ready mixed will cost between \$1.75 and \$2.00 per hundred pounds: Coarse bran, 25 lbs.; corn meal, 25 lbs.; gluten, 15 lbs.; cut clover or alfalfa, 7 lbs.; low grade flour, 10 lbs.; ground oats, 10 lbs.; fine fish or beef scrap, 8 lbs.

Small Lot Flock.

Q. (1) I want to start with a good utility flock and prefer white eggs, or as near white as possible. Have limited space. Please say which will be best for my purpose, White Rocks, Wyandottes,

dottes, Minorcas or White Leghorns.

A. (1) If you want white eggs, either Black Minorcas or White Leghorns should suit you. The Minorcas will give you a much larger fowl for the home table.

Q. (2) I intend to buy a portable open-front house 10x10 ft., and will have a wire enclosed run 35x45 ft. House will face south and run to south. How many birds can I keep profitably in same?

A. (2) Twenty-five of either of above named breeds. Keep the soil of the yard well cultivated and sow often to rye or oats. Provide shade.

Q. (3) Would you advise getting an electric incubator for this season's hatching? I never used an incubator. What is the best way to get acquainted with operation of one?

A. (3) Unless you have more space available you will not have a great deal opportunity for artificial hatching and rearing. You will find it easier to hatch with hens or to buy day-old chicks or stock for your start. Some electric incubators do excellent work. The best way to learn is to get one and follow the manufacturer's directions. If you do not hatch with hens you will need a good brooder to grow the chicks, or good brood hens.

Q. (4) What is the best way to get started, buy stock, chicks or hatching eggs?

A. (4) All three. In your case we would get some good broody hens nearby and buy both hatching eggs and day-old chicks and rear them with hens.

Q. (5) Name a good book telling a beginner just how to hatch and raise chickens.

Montclair, N. J.

F. H. S.

A. (5) "How to Raise Chicks" by Dr. Woods, which may be obtained of AMERICAN POULTRY JOURNAL book department, postpaid for 75 cents per copy; a cloth bound book of ten chapters in 123 pages and thoroly practical. It tells how to select and mate breeding stock, about foods and feeding, housing, care and management of breeders, selection and care of eggs, incubation natural and artificial, rearing chicks with hens and brooders, chick foods and feeding the chicks, care of growing chicks, prevention of chick diseases. You cannot afford to be without this book if you are starting with poultry.

Weight of Leghorn Pullets.

Q. (1) What should be the weight of S. C. White Leghorn pullets, seven months old, where eggs are the main object?

A. (1) Three to three and one-half pounds each.

Q. (2) What action does air-slaked lime have on droppings, when used on drop board weekly?

Milan, Mich.

J. B.

A. (2) It frees the ammonia. Do not use it. Use ground land plaster (gypsum), dry loam, or dry sand.

Wants Advice on How to Proceed.

Q. With seven acres of land and the necessary equipment for working the same, a flock of 200 choice S. C. White Leghorn pullets, well housed and sufficient building material to increase capacity to 500 head; a brooder house and colony brooder; plenty of "pep" backed by a determination to beat the "blue envelope"; no capital; how shall I proceed to make the best and surest success? My original plan was to double size of flock each year until I had

OWEN FARMS

WHITE LEGHORNS

At the Great Boston Show, 1916

1st and 2nd Cockerel: 1st, 3rd and 6th Pen; 2nd, 3rd and 5th Pullet: 3rd, 5th and 6th Cock; special for best three Cockerels and best three Pullets.

BUFF ORPINGTONS

At Boston, 1916

1st, 3rd and 5th Cock; 2nd and 3rd Hen; 1st Cockerel: 1st, 2nd and 3rd Pullet; 1st and 4th Pen, and all specials. Note—Madison Square 1st and 2nd winning Buffs were not shown at Boston.

S. C. R. I. REDS

At Boston

In best class of the year, won First Collection, Special for best three Cockerels, and best three Pullets, repeating their 1915 winnings at Boston of these same specials. In 1915 they also won 1st Cockerel, 1st Hen and 1st Pen.

White Plymouth Rocks

I am not showing White Rocks anywhere this winter. My sales in this variety have been the largest in the history of the Farms and my customers have won splendidly. The winnings of the flock during years past have well established their ABSOLUTE SUPREMACY and my 1916 Matings will produce birds that will maintain this position.

White Wyandottes

At Chicago, December, 1914

1st and 2nd Cock; 1st, 2nd and 3rd Hen; 1st, 3rd and 5th Cockerel: 1st and 3rd Pullet; 1st and 2nd Old Pen; 1st and 2nd Young Pen; all the Specials, including Best Collection and Shape and Color Specials as well. This was the most complete winning ever made at a National Show and was made in a splendid class of 157 WYANDOTTES. The past show season I have furnished many winning birds to customers and Owen Farms Wyandottes have proved their quality.

Breeding Pens

I have a few excellent cockerels in each variety that are good enough to head your best matings. If your males are not exactly what you wish I can help you strengthen. I still have enough females to spare to mate pairs, trios and pens for you that will breed you superb youngsters and will be put together with all our knowledge of the breeding back of our birds and our skill in producing winners. Write me exactly what you need and let me quote you.

MARCH SPECIAL

I have strong, husky cockerels in every variety but White Rocks at \$5.00, \$7.50 and \$10.00 each; every one a genuine bargain at the price and sure to please you.

Owen Farms Flocks are Established

They are years beyond the experimental stage and have been the foundation blood of most of the really successful breeders in the country. Very few really good flocks exist that do not have more or less Owen Farms blood. My birds have made good for others and will start you on an equal fighting basis and save you many years uphill work. TRY THEM YOURSELF.

UTILITY QUALITIES

Owen Farms birds are famous the country over for size, bone, perfect health, vigor, prepotency and heavy laying qualities. There are no birds that excel them in these important functions and very few flocks anywhere near as good.

Satisfaction Guaranteed Every Customer Every Time

I do not want any customer to keep a bird that does not please him, and any bird I ship can be sent back after a forty-eight hours' rest and the purchase money will be promptly refunded. I will pay the return expressage on males at \$10.00 or more each and on females at \$5.00 or more each.

OWEN FARMS

107 William Street

MAURICE F. DELANO, Proprietor

Vineyard Haven, Massachusetts

FRANK H. DAVEY, Superintendent

reached 2,000 head, which means to raise 400 pullets this coming season. With no income other than that derived from the land and present flock, is my plan practical and will I profit by purchasing an incubator and day-old chicks? Advice from practical people of tried and proved ability will be appreciated.

Milan, Mich.

J. B. Y.

A. Well, there is a question we would like to see answers to. Not more than one hour a day labor should be required to care for the 200 pullets, but a 7-acre farm, properly farmed, and growing not less than 1,000 chicks to get 400 pullets, will keep one man, "with plenty of pep," fairly busy. Two hundred pullets will not bring in enough return to go far toward paying living expenses, to say nothing about the cost of growing 1,000 chicks. We would say, get a chance to "work out" to bring in enough cash to live on and help pay the feed bills; farm the farm to the best advantage that circumstances will permit, and do not try to grow any more chicks than you can grow properly. A small flock well raised is better than a larger flock not well cared for. Devel-

opment and increase of the plant will have to depend upon the ability to earn funds with which to increase. The crops to be grown on the farm will depend upon the market. Would not try to set any fixed rate of increase; just grow as many chicks as you can grow properly and profitably. We know a New England poultry keeper who started with 50 cents in cash, a 40-acre farm, mortgaged to the limit, and a family consisting of a wife and two children. He "worked out" for the neighbors at 25 cents an hour or \$2.00 for an eight-hour day, and worked his own place outside of working hours. It took him five years to get a first-class start and at the end of ten years he owned his farm clear, had a horse and cow, 2,000 head of fowls, two brood sows and a dog; and he was then putting in all of his time on his own farm and his son was working for him part of the time and for the neighbors when opportunity offered. With good health and a determination to win, you ought to make good too. Without capital, and in your circumstances, we would not put money into an incubator just now. You can make your money, that you

earn, go farther by putting it into broody hens for hatching your home eggs, or by getting your eggs hatched by some good incubator operator, or by buying day-old chicks. Later on a good incubator, when you can afford it, would be a good investment. Of course if you have a good market for day-old chicks nearby, you could probably make an incubator pay for itself, if you operate one successfully; but generally you can buy brood hens at a price low enough so that you can use them and get your money back when thru with them. Where the market for day-old chicks is good, during the season when eggs drop to 16 to 20 cents a dozen, a good incubator, well operated, is a paying proposition and 12 cents each for your chicks will pay you much better returns than selling your eggs to market. But before you tackle this proposition you should be sure of your market for chicks and sure also that you can hatch good marketable chicks in profitable numbers.

Crippled After Washing.

Q. I have a valuable S. C. White Leghorn cock that has become suddenly crippled after washing him in prepara-

Hawkins' BARRED PLYM. ROCKS

**The Recognized Champions of America.
Winners at the Greatest Shows.**

Boston, New York, Chicago, World's Fair, San Francisco. The kind you will buy, when you want the best. By careful line breeding over a period of over 30 years, I have produced a strain of Barred Plymouth Rocks that has all the desirable qualities any fancier could wish for. My winnings at the greatest shows in America prove that they have the type and color that is correct. By careful selection this strain has developed utility features possessed by no other flock of Barred Rocks in America.

At Boston, 1915, in competition with the leading Eastern breeders in the best exhibit of Barred Rocks ever seen in Boston, they won 1st and 4th cocks, 1st and 2nd hens, 1st cockerel, 1st cockerel-bred hen and 1st pen, 1st and 3rd pullet-bred cocks, specials for best display, champion male, best colored male and female.

At the World's Fair, San Francisco, 1915, I entered a cock and hen and won 1st hen, 2nd cock, after shipping 3,500 miles.

At Chicago, I made a clean sweep two years in succession, competing with 654 birds, the "Aristocrats" of the West, including best display, champion male and female.

At New York, for 32 years they have won more prizes than any other strain. An entire flock of 21 pullets of this strain averaged 207 eggs in one year, again proving the superiority of my breeding method.

EGGS FOR HATCHING

From the World's Best Matings. 1 setting, \$10.00; 3 settings, \$25.00. Why not get the best? I guarantee satisfaction; write for my catalog of the Champions. It's free.

Save the Babies

Reduce Your Loss of Chicks by Feeding Them With a

Simplex "Faultless" Baby Chick Feeder

The greatest contrivance yet invented to take the place of the Cluck in finding food for the little ones; and what's more, they don't have to wait until the hen is successful in finding something for them, neither must they wait for the man with the feed, get weak and lose vitality owing to proper food at the proper time.

The "Faultless" Baby Chick Feeder

is always on the job. It works like a charm, feeds the chicks nice, fresh, clean feed whenever they want it and just enough at a time with just enough exercise to keep them in good condition. Try one now and get more when your chicks start to hatch. Send for our complete catalog and find out about our profit-sharing plan.

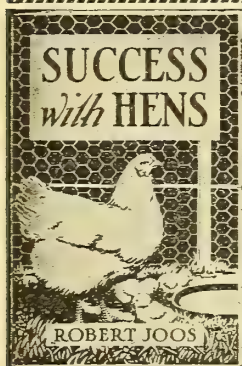

SIMPLEX SUPPLY HOUSE Pontiac Bldg. CHICAGO, ILL.

tion for a show. When I put him down he could not step on one foot and acts as if he had a string attached to it that was pulling it from behind. He kept kicking his foot out behind and when he finally did put it down, it was with great difficulty and he would not bear any weight on it. The toes are stiff and cramped and he does not seem to be able to straighten them out. He never had any trouble before and I thought perhaps he had a strain or dislocation of a joint, but I cannot find any difference in the joints. There is no swelling. He kept fairly quiet in the tub, but might have strained himself. The tubs were in a warm room and water fairly warm, same as used for other birds, and they were all right. His appetite is good and his comb is as red as ever. He crows and seems all right in every other way, but he cannot walk or flap his wings without falling down. Would like to fix him up before trouble becomes worse. Cumberland Center, Me. C. S. B.

A. Without examination of the bird it is not possible to say what is wrong. You may have strained him or injured him internally, or the trouble may not be due to the washing, but simply aggravated by it and due to some disturbance of digestive and nervous system. However, it looks most like injury from squeezing, straining and fright. Rest and quiet, with good, but not too liberal, feeding on a variety of wholesome food is the best treatment. You can rub the leg gently, daily, with oil of cajuput. Do not handle him roughly and keep him off the leg if you can. If you know a nearby physician who is interested in poultry, have him examine the bird for a possible dislocation of hip joint.

Remodeling Barn for Poultry.

Q. I have a barn that was built in 1914 and used for growing squabs. Have sold all pigeons, so barn is now empty. I want to raise chickens and want to do it right, but would like to use the barn. Inside measure of barn is 10 ft. wide, 20 ft. long, 7½ ft. high in front, 6½ ft. high in rear. Has two doors in front, each 3 ft. wide; with two front windows 30 in. square. At back is one sliding window 12x36 in. This barn faces east and is set up on blocks one foot above ground and has a double floor with tar paper between. Would you use it the way it is or remodel it? Would it be all right to take out the

Queen Incubators Built to Hatch Without Trouble

For practical poultrymen and poultrywomen, the Queen is, we believe, the ideal machine. It is the really high-grade machine sold at a medium price. It is a hot water machine, carefully built of much better materials than you will find in many incubators, and regulated so accurately that it will automatically take care of itself under unusual conditions.

Strong, Sturdy Chicks

known a machine that hatched such strong, virile chicks as the Queen, and that many of their customers comment on this. Last season they hatched 2500 chicks from Queen machines, selling \$500 worth of them, and no complaints of chicks dying. The Queen seems to start them off with greater vitality—providing the best possible surroundings and conditions of moisture and heat for the chick to make the most of its start in life.

Let Your NEXT
Be a Queen.

Anyone Can Hatch With a Queen

E. G. Collins, Vandalia, Mo., writes Aug. 17, 1915: "I am sending you pictures of my first 2 hatches. The first was 191 chicks out of 195 fertile eggs; thesecond 175 chicks out of 181 fertile eggs. All I have to say is that anyone who knows enough to keep out of the fire can hatch chicks with a Queen. The Queen will hatch chicks while you sleep, as I never get up at night to see how it is running." The Queen is not a cheap incubator, compared with many of the cheaply constructed machines on the market, but it is cheap in the long run. It will be turning out high-percentage hatches years after the cheap machines have been junked. It will be a pleasure to send you our Catalog.

Queen Incubator Company
105 Bryan Avenue Lincoln, Nebraska

Buy The GEM---The High Per Cent. Hatcher

Insure yourself against disappointment and loss in your hatching. The Gem is the machine either for the beginner or the most experienced.

25 Years Highest Success and Efficiency Record

None better regardless of price. Big hatches are not the real test. How many chicks live? THAT'S the point.

Gem chicks are always lively and thrive, because our unique system of ventilation conserves the natural egg-moisture. You "old timers" know this is so.

Walls, six-ply, with four layers of insulation. Air-tight doors. Gem is built of cypress, the "wood eternal." Our exclusive Hot-Water Heating System of cold-rolled copper (note that) distributes and equalizes the warmth perfectly. Extra sensitive Double-Wafer Regulator controls temperature absolutely. Removable Chick Trays make thorough cleaning easy. Flush top—no obstructions—handy for turning eggs, etc. Many more desirable and exclusive features explained fully in big handsome free catalogue. Get it; also our special offer, and "How To Buy an Incubator," and save money. Write today

RILEY'S White Wyandottes

Broke all records at the Ohio State Fair, September, 1915, winning six firsts, three seconds and two thirds. The quality of my exhibit was freely commended by both judges and breeders. This, together with my winnings of December, 1914, at the Great Coliseum Poultry Show and Toledo proves their quality as breeders. They are bred to lay with the same care they are bred to win. Why not try the strain that win as well as lay? Eggs from pens headed by my winners at \$3.00 and \$5.00 per 15 eggs. Some nice Cockerels at \$5.00, \$7.50 and \$10.00. Send for catalog.

H. J. RILEY **BOX A** **BRYAN, OHIO**

Howison's Buff Wyandottes

Blue ribbon winners at the World's Fair, Chicago Coliseum, Greater Chicago Show, Quincy and Illinois State Fair, 1915-16. Most consistent winnings of any exhibitor in the West. Five grand mating for 1916. Eggs, \$3.00 to \$10.00 per 15. Utility eggs from same strain, \$5.00 and \$7.50 per 100. Send for mating list.

Charles Howison **Box 20** **Sandwich, Illinois**

front windows and put on fine wire mesh? Our winters here are rather cold and damp. Intend to raise Barred Rocks or White Wyandottes. The front windows are close up to roof. Davenport, Ia. **G. W. E.**

A. We would turn the barn around to face south,—it will not be a very big job if you borrow some jacks and some heavy timbers to block up with. You will not need to remodel it much, except to close those high windows and put a couple of 3x4 ft. openings in front about 2 ft. above floor; cover these with fine mesh wire netting. See that rear window is tight and put a double window over it in winter. Put roosts in rear of building. In mild weather run with doors wide open also. Be sure to white-wash it well and let it dry out before using for poultry. If you have a great many driving snow storms from the south, a screen of cotton cloth on a wooden frame can be used to partly close the openings in front, but do not close them entirely.

Miscellaneous Questions.

Q. (1) What is the matter with a pullet that started to lay, did so for a short time, and egg organs dropped out?

A. (1) Prolapsus of oviduct. Examine for egg bound. If an egg is found in passage, immerse abdomen and vent in warm water for about 15 minutes, then with fingers, well greased with vaseline, try to remove the obstructing egg. After freed from egg grease parts well with vaseline and push them gently back into proper position. Cotton pad and bandage may be applied to hold parts in position. Trouble is liable to recur and treatment, unless applied promptly after accident, is seldom satisfactory.

Q. (2) How many pullets can be raised on a lot 75 ft. square, the cockerels to be moved to other yards when about three months old?

A. (2) About 100 if well cared for.

Q. (3) What is best to plant in yards, in the spring, to give good quick growth of green food?

A. (3) Oats or rye.

Q. (4) Would it do to raise two breeds in same yard, for example: Orpingtons and Campines, if kept together from time hatched, or would one hinder the growth of the other?

A. (4) Don't do it. They will not do well and it will be a serious handicap for both. Grow them in separate yards, or better still grow only one breed.

Q. (5) How many square feet per bird is required in house for small breeding pen of seven to nine birds?

Centerdale, R. I. **G. B. B.**

A. (5) Would prefer to give such a flock a house not less than 6x8 ft. on floor and with convenient head room.

Barred Plymouth Rocks.

Q. I have thirty-four pullets and twenty-five hens of good Barred Plymouth Rocks, exhibition quality, and some good males of same breeding. I have had sent me two fine cockerels of another strain. My friend, a breeder, advises me not to use them on my stock, "or I will spoil all." Is it advisable to mate cockerels with pullets just because I do not wish to risk introduction of foreign blood? I have a 4-year-old cock of the original strain, should I mate him with my best pullets? How would you advise me to mate? I intend to sell eggs from my stock. Would like to know how to proceed, but mating ques-

George H. Rudy, Mattoon, Ill., and his White Wyandottes are known from coast to coast. In fact, they are known wherever White Wyandottes are bred, for he has shipped them almost everywhere. The remarkable record of his old bird "Perfection," winner of fourteen 1sts at fourteen shows, is still fresh in the minds of White Wyandotte fanciers. Mr. Rudy made a fine exhibition at the Greater Chicago Show this year and the picture above of two of his winners shows the fine type of the birds bred by him.—L. A. S.

tions are perplexing to a beginner.
Worden, Ill.

G. J. M.

A. We would not mix the two strains in any flocks from which you intend to sell eggs for hatching. If you have room enough to keep several families, we would mate the new strain males to a few good females and keep the families separate. Get your breeder friend to help you balance up the matings properly. Mate the old cock of original strain with some good well-matured pullets that balance well with him. If cockerels and pullets are well matured you can use them together all right. Make up several foundation family matings and keep the family lines separate, if you hope for good results from Barred Rocks. Mark all eggs for identification and toe-mark and keep a record of all

chicks, so that you know where they come from and can keep family lines straight. From what you say, should judge that you have an excellent foundation to build on and can build at least three good strong family lines. Breeding fowls requires study and a knowledge of the birds. Figuratively, we talk and write of double and single matings; but in actual experience each mating is distinct in itself, or should be, and must be balanced according to the particular needs of the individuals that are included in it. No two individuals are ever exactly alike in all particulars or in breeding qualities; you have to know your fowls and learn to balance matings so that they will "nick" well for best results. Weakness or defects of any kind on one side have to be properly

balanced by strength on the other. For example, we know a breeder of pullet-bred Barred Rocks who has at the present time not less than eight distinct and nicely balanced matings in his yards, and he figures on pretty good and satisfactory results from all of them. Until you begin to see individuality and learn the qualities of each individual in your flocks, you will not have begun to be a successful breeder.

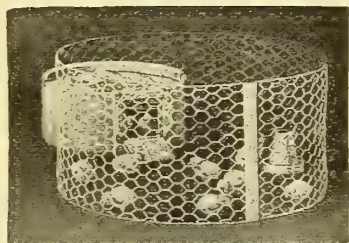

GREIDER'S FINE CATALOGUE

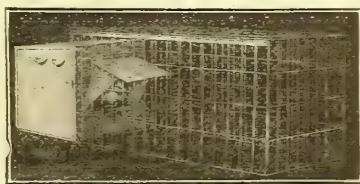

of fine, pure-bred poultry for 1916. This book contains many pages of poultry facts. 70 different varieties, some shown in natural colors. It's the Man—Not the Plan

By P. K. White

WE ARE prone to give credit to the plan as being the thing that makes a successful business. But we are all wrong, it is not the plan, it is the man behind the plan that is responsible for the success.

The man who has a well-defined ideal, who hews to the line, who eliminates all deterrent influences, who concentrates his energy on his ideal, who bends his efforts towards the one thing, is pretty sure to accomplish his purpose.

About 22 miles west of Chicago is a little German village composed of thrifty farmers, whose motto is "work and win." To this village came one day a gentleman seeking a location for a poultry plant; he was shown several farms and finally selected one about $3\frac{1}{2}$ miles distant from the village. This happened several years ago.

He proceeded to erect a few buildings, bought the best birds obtainable and set out with a definite plan, a fixed

purpose. He carried the plan out; today he is known from one end of the poultry world to the other, and has made his name a household word wherever good poultry is bred.

Of course he had his ups and downs, the same as we all have, but the one word he knew nothing about and which he refused to think of, was "failure."

He had the courage of his convictions, he knew his plan would be successful, by day he worked to make it a success, at night he dreamed it was successful, in that way he has today made his farm one of the largest poultry plants in the world.

You will say it was the plan that was the secret of his success. You are wrong! It was the man carrying out the plan. Greatness may be thrust on us, success comes by hard work, "it is the man, not the plan."

Here is the story. This man knew that good eggs brought good prices, he

knew those eggs if fertile produced good birds, therefore he set out to produce heavy laying birds, those that would lay winter and summer and yield at least two hundred eggs per bird. He knew that if he could produce birds that would be heavy layers, he would by all rules of nature get a certain percentage of "show birds" from these eggs.

That he had the right idea is shown by the fact that his birds are now known as the 200-egg strain and he has any number of letters showing that eggs and baby chicks which he has sold have turned into ribbon winners in some very large shows, thruout the country.

He has eight varieties, namely S. C. White Orpingtons, Barred Rocks, S. C. Buff Orpingtons, S. C. White Leghorns, White Wyandottes, R. I. Reds, White Rocks, and S. C. Reds. One of his White Rocks was winner of first prize at a Mountain Grove egg laying contest—she laid 281 eggs. This bird he paid \$800.00 for. Later on he purchased another famous bird with a record of 301 eggs. In his way he kept building up, no price is too high for him, provided the bird has a world record as a layer. His White Rocks have records of from 202 to 301, Barred Rocks 200 to 241, S. C. Reds 200 to 243, S. C. White Leghorns 203 to 285, R. C. Reds 203 to 256, White Wyandottes 202 to 256, White Orpingtons 222 to 241, Buff Orpingtons 216 to 232.

The farm consists of thirty acres, situated on a main traveled road, and is one of the sights of the county, on account of the number of buildings and, as you know, there is nothing prettier than a bunch of white fowls roaming around their yards.

On this farm, system is the watchword, both in the office and on the farm. Entering the office, you first see eight large files, a file for each breed. These files contain a card index system, giving the number of each trapped bird and giving the egg yield each day of the year for each bird. These cards (as shown by the illustration) are made up for each day in the week beginning with

are customers are to be found. Another large file of twenty-one drawers takes care of all the inquiries and after a sale is made the correspondence is transferred to the customer file.

then, if the sale is made, it is also marked up. In this way he knows just what journals to advertise in and when he finds one that doesn't pay, he takes his ad out.

A great number of his birds are raised right on his farm where they have his personal attention, the rest are raised by nearby farmers. There are about thirty-five farms which he furnishes with eggs and baby chicks, no other fowls are kept on these farms except his birds, those originating from the home plant—in other words, the original blood lines thruout. This plan has been proven by hundreds of breeders as the logical thing to do, as free range chicks in comparative small flocks will produce more vigorous and hardy specimens and are by far the best egg producers.

Forty-one buildings, 5 feet wide and 8 feet deep, are used for breeding pens, each house containing eight females and one male. Of these pens seventy-five per cent are used for housing the best layers, the balance are mated for exhibition purposes only, altho the gentleman himself has never entered a bird for competition.

The main incubator cellar has a capacity of 11,600 and it is a noticeable fact that he is gradually going in for the new sectional incubator — he has one machine of 2,000 capacity and informs me that he has placed an order for three more machines of 4,000 capacity each, one machine to be delivered each year for the coming three years. Placing an order like that one may judge of the future business he is building up.

The auxiliary incubator cellar, 80x28 ft., has a capacity of 9,600, of this

[illegible]

of the year by days and weeks.

Next comes the correspondence file, which is 7 feet long and 4½ feet high; it contains twelve drawers. In these files nothing but letters from those who

Just write Gilcrest a postal today.

amount 6,000 is the new sectional. Adjoining this building is the manufacturing building, where shipping coops are made, and the cartons for chicks and eggs assembled. This building is 28x10 feet.

There are two brooder houses. Number one is 155x16 ft. and has a capacity of 2,200 chicks. Number two is 135x16 ft. with a like capacity.

The room above the incubator cellar is used for manufacturing feather brooders and trap nests. Here is a feat-

the birds have completed their trap nest record, as this article goes to press.

There is even a room set aside for oat sprouters, so that his birds may at all times have green food, for his motto is, nothing too good for the birds.

FEEDING AND CARE OF HOUSES.

The morning meal consists of one part cracked corn and two parts wheat, thrown in a deep litter to induce exercise. At all times, they have before them hoppers of dry mash, composed of equal

with but three. What does it mean? It means he is giving his customer a dollar's worth of value for every dollar received, otherwise his business would never have grown to such magnitude.

All stock that does not live up to the demands made upon it—for egg production or exhibition—is sold (dressed) to fine trade in Chicago, where the demand far exceeds the supply. These people, knowing his plant and birds, are very willing to pay four and five cents a pound above market price.

A view of trap nests, showing them both open and closed.

ure that others would do well to adopt. All feeders, grit boxes, fountains, trap nests and brooders are manufactured right on the farm and in most cases they are the owner's own invention.

Next comes the grainery. This building 20x30 ft., it has a grinder, mixer and straw cutter, all run by a gasoline engine. He buys all his grain from nearby farmers, does his own mixing and in this way he figures that he saves about seventy-five dollars a month on his feed bill.

Now for a trip to the colony houses. There are forty of them, size 5x8 ft. It is in these houses that he places the chicks after they have outgrown the brooder houses.

Of course, he is always trying out new ideas, as a year ago he invented what he calls his "fresh air type" house. To fully appreciate it, you must see it, for with this house the birds get all the fresh air they want, without experiencing the outside temperature. Each of these houses contain twenty-five birds and there are a total of 41 of them, size 5x10 ft. There are eight of these "fresh air type" houses, size 8x16 ft., in which the birds began their trap nest record on January 1, 1916.

Next we come to eighteen more of these "fresh air type" houses, size 14x20 ft., with a capacity of seventy-five birds to each house. In eight of these houses

parts of wheat middlings, oatmeal, bran and meal alfalfa, together with some beef scraps. At noon they are given a liberal supply of sprouted oats. At night a mixture of one part whole wheat and two parts cracked corn. Fresh green bone is given twice a week.

If ever a man believed in "Cleanliness being next to Godliness" as pertaining to a poultry plant, then here is the man. I have visited a number of poultry plants this year and can truthfully say that this farm is as "spick and span" as it is possible to keep it. Dropping boards are cleaned every morning and all houses thoroly cleaned once a week. How some breeders expect their birds to keep healthy with the "filth" that is left around, is more than I can see, yet if one was to tell them that their pens were dirty they would become highly insulted.

All in all, there are 114 buildings—think it over, friend reader, he started

The same is true with his eggs. Since the advent of parcel post, he has no trouble in disposing of all surplus eggs to Chicago trade at ten and twelve cents a dozen above market price.

Now, reader, if it is possible for you to get away for a few hours, go and see this plant. You will say it is a wonder and will come away from there very glad to think I have called your attention to it.

If you do go I want you to especially ask to see the wonderful trap nest that this gentleman has invented. Just a simple little affair, but it does the work, that's what makes it so wonderful.

By the way, don't go there at night, for Mr. Poorman has five watchmen in the shape of Airdale Terriers.

Oh, gee! I let the cat out of the bag, I didn't intend to tell you who I was writing about, but here goes—it is John G. Poorman, Tinley Park, Ill.

Fresh air type house. Note the openings above and below the windows.

Readers Experience Department

Egg Production Cost in California.

AFTER assisting in the work of closing the gates of China and the 10 cents per dozen eggs, will you please ask Mr. Harker, of the *Pacific Fanciers' Monthly* to let me know in what part of my glorious state he kept a flock of poultry where eggs could be produced for 10 cents, or even 15 cents a dozen for thirty days continuously. I will not have time to go to see how it is done this Winter, but will select March, as I think then I might see something—and I might not. Anyway, after being in

order to keep in the business and get a little return for my investment and labor.

I want to say a good word for the A. P. J., the only poultry paper I ever read that gives a fellow something to think and study about.

Sacramento, Cal.

L. ESKRIDGE.

Net Cost of Eggs.

Your editorial "Net Cost of Eggs" in the November number of AMERICAN POULTRY JOURNAL has caused a number of students in the poultry department of the De Hirsh Agricultural School to in-

eggs occupies the mind of everyone who is interested in poultry. From time to time articles discussing the productive cost of eggs appear in the poultry press. The figures given vary greatly, from 10 to 25 cents per dozen.

"It was therefore part of the work of our Poultry Seniors to clear up this point, from their own actual experience.

"Herewith are given figures by one of the Poultry Seniors, taking a small flock of 250 fowls as a basis.

"Investment:

Land, one acre.....	\$ 35.00
Fowls, 125 hens, 125 pullets, at \$1.25.....	312.50
Hen house, 20x50 ft.....	250.00
	<hr/> \$597.50

"Expense:

Taxes on land 1 per cent.....	\$.35
Insurance, 2 per cent on \$250.....	5.00
Interest on money invested 4 per cent.....	23.90
Depreciation on building, 5 per cent.....	12.50
Depreciation on fowls, 25 per cent.....	78.12

"The average cost of producing a dozen eggs, as figured out by 12 specialists, is 22.1 cents."

Barnet Rabkin,

Instructor in Poultry Husbandry.
Woodbine, N. J.

Immature Breeding Stock the Cause.

In recent poultry literature there has been a great deal said about the "small round egg" of the Wyandottes at some Experiment Station. This talk is almost too ridiculous to be funny and can have no serious effect on the Wyandottes, altho breeders everywhere are closely watching the reports from the Experiment Stations. However, Wyandottes are "known by their works," and where the experimentors got hold of the freaks with the "little round eggs," it would be interesting to know. I have been breeding Golden Wyandottes for a good many years and have bought birds and eggs of the variety from various sources but I have yet to discover any of those "small round eggs" from my own or other flocks, tho I have handled countless cases of pure Wyandotte eggs.

Most of the comments I have noticed from the Wyandotte breeders on this subject has been to the effect that the

NINE THOUSAND DAY-OLD CHICKS IN ONE SHIPMENT.

The above picture shows 9,000 "Better Hatched" chicks being sent out by express from the plant of the Co-Operative Breeding and Hatching Co., Box A, Tiro, Ohio. This shipment represented less than one-half of the hatch that was taken off that day. Note the perfect ventilation between the boxes.

this poultry game for the past twenty years for a living, I would like to be shown where I have been making such a big mistake, as I find I need, at the lowest, about 25 cents per dozen in the Spring, and all the high prices I can possibly get in the Winter months, in

investigate the cost of egg production. The following clipping from the *H. A. S. Record* may prove of some interest to readers of the AMERICAN POULTRY JOURNAL:

THE COST OF PRODUCING ONE DOZEN EGGS.

De Kalb, Ill.

small egg was the result of too close inbreeding. This may be true in the case of the beginner and the "beginner" will include many who have been raising poultry for years.

I believe there is a reason far more important than inbreeding and that is the common practice of breeding from immature stock. The beginner, at least has no business with a pullet or cockerel in his breeding yards. But every year, everywhere, breeding pens are made up of cockerels and pullets undersized and underdeveloped in every way. Eggs from these matings are set and the chicks when raised are again placed in the breeding pens before they are developed sufficiently for the purpose. The results are disastrous and need not be detailed, but "little round eggs" is one of them.

The experienced breeder, of course, avoids breeding from immature stock for his own good, even tho he may have no thought for the breed itself. If every

Parks' Trap Nest, invented 1908, by J. R. Parks, Altoona, Pa.

poultry raiser could be made to understand what a breeding pen should be and these few first principles of breeding carried out it would be a great day for the poultry industry.

Personally I would rather use in my breeding pens a cock that happened to be under weight, but which had descended from a line of mature ancestors than to use one over weight from a line of immature ancestors, because the result of the immaturity would show up in an unfavorable development of the chick and its product.

In purchasing eggs for hatching it is a wise plan to make sure they are from mature stock, or if stock is bought for immediate use, cocks and hens should be purchased. Use the eggs for breakfast from pullets and you will never be troubled with "little round eggs."

D OSCAR MEAD.

Pinckneyville, Ill.

Profit from Flock of Wyandottes.

Perhaps the following record made by a pen of thirteen White Wyandottes may help to convince some of the skeptics and encourage the beginner.

The table shows the actual receipts for hatching eggs, but I do not give the hens credit for the eggs set and eaten at home. The number of eggs laid by

Rochester, May 24th, 1915.

U. R. Fishel, Hope, Ind.:

The setting of fifteen eggs received in perfect condition. We have twelve strong, healthy chickens; one egg was broken soon after we set them. We are very much pleased with the hatch, and wish we had ordered more eggs and hope to do so another year. Thank you very much for the literature.

Respectfully,

Mrs. Charles S. Parker.

—, N. H., April 21st, 1915.

U. R. Fishel, Hope, Ind.

Dear Sir—Twelve good chicks from fifteen of U. R. Fishel's best eggs,

Respectfully,

John Currier.

—, Ia., November 14th, 1915.

U. R. Fishel, Hope, Ind.

Dear Sir—Have the finest lot of pullets and cockerels from your eggs. The finest flock of White Rocks in this vicinity. Have one cockerel that will be hard to beat. I beg to remain,

A satisfied customer,

Carl Braun.

—, Minn., December 22nd, 1915.

U. R. Fishel, Hope, Ind.

Dear Sir—I am writing you in regard to a cock bird. I will need one to mate with my pullets I raised from the eggs bought of you last spring. I am very well pleased with them. At our local show I won all prizes on pullets, 3rd cockerel. The judge said our birds were as good as any in the state. Now what I want is a cock bird hatched in the spring of 1914, good in all points, with good length back and rich yellow legs.

Yours truly,

Roy G. Dibble.

—, Neb., June 26th, 1915.

U. R. Fishel, Hope, Ind.

Dear Sir—Received the sitting of eggs May 30th, set them 31st, have 10 nice chix. Think I would have had twelve had I used a little judgment. I am sure pleased with the results. I have nearly 200 chicks from the cockerel I bought of you last fall. I am sure pleased with all the stuff I have bought of you and wish to thank you very much. You will sure get any orders I may have for White Plymouth Rocks.

Yours very respectfully,

J. H. Stoddard.

T—sa, Okla., September 26th, 1915.

U. R. Fishel, Hope, Ind.

Dear Sir—You ask that I report results of hatch from eggs received from you last spring. I got fifty-five chicks from 100 Sale Stock eggs. We have had a county fair and I exhibited a pen of White Rocks. I got 2nd on pen, 1st on hen, 2nd on hen and 3rd on hen. 2nd on male two years old, hatched from eggs received of you 1913. Kindly quote prices on males this season.

Yours very truly,

Mrs. Anna Berryman.

—, Ohio, August 4th, 1915.

U. R. Fishel, Hope, Ind.

Dear Sir—I am pleased to write you, twenty-five of the thirty eggs were fertile and twenty-two hatched lively chicks. I think this fine hatch due to the good shape the eggs were packed.

Yours truly,

Mrs. C. A. Spafford.

—, Mich., November 26th, 1915.

U. R. Fishel, Hope, Ind.

Dear Mr. Fishel—Can you supply me with between 1,500 and 2,000 hatching eggs from your Sale Stock, making two shipments of same, the first shipment about January 15th and the second thirty days later, and at what price? You can see by this that I am well pleased with birds hatched from eggs supplied by you. They sure are dandies and I just love them—want to be with them all the time. I believe I have a record breaker in my first pen; she started to lay September 26th (age 6 months) and has only missed nine days since that time. In other words, she has laid 53 eggs since the 26th of September and three days of that time she spent at the county fair. My birds were awarded 1st and 2nd pullet, 1st and 2nd cockerel and 1st and 2nd pen. The Fair people have only given me credit for four prizes and I cannot get things straightened with them. Hemenway was judge, and as soon as he returns from the West I am going to see if he can't get all that is coming to the birds. Please let me hear from you at an early date regarding the eggs and greatly oblige,

Yours very truly,

H. C. Streeter.

Eggs that hatch

is what you want when you place your order for eggs for hatching. You do not want to fool away three weeks time, and your money also, for eggs that only give you two or three chicks out of fifteen eggs.

U. R. Fishel's White ^{Ply-}mouth Rocks

are reared and bred under conditions that insure Eggs that Hatch. Each and every breeding yard has free range, so to speak. No bare ground small yards at "Fishelton." We get as close to nature as possible and therefore, chicks hatched from Eggs, or Baby Chicks shipped from "Fishelton" are

chicks that live

and grow, and mature into birds worth while. *I guarantee my mated yard eggs*, something no other White Rock breeder has ever dared to do. *WHY?* Don't place your order until you see my *1916 Mating List. It is Free. Send for a copy.* Do you want *Selected Breeders or Utility Fowls?* If so, I have *over 2000 to select from.* Our Matings this season are the choicest I have ever owned. *Mating List Free. Send for a copy.* When you buy White Plymouth Rocks, buy the BEST. Bred in line for over twenty years. Write me your wants please.

Albert E. Hartung.

Combining Utility and Exhibition.

In your December issue, page 1467, E. R. Wells tells how fowls may be bred for both utility and exhibition purposes with some degree of success.

Rose Comb R. I. Red cockerel, bred and owned by W. A. McConnell, Richmond, Ill. This picture shows to good advantage the fine quality of Reds to be found in Mr. McConnell's yards.—F. D. R.

His plan briefly outlined, is to select good laying stock of solid color, preferably white. Breed them for a series of years with an eye to egg production. Then from 1,500 birds, select 100 with an eye to Standard requirements. From the progeny of this 100, select 12 for exhibition, with what success he does not state.

This is no doubt thoroly practical and violates no biological law but is a vastly different proposition from breeding simultaneously and with one or more matings for both egg production and Standard requirements, and achieving satisfactory results.

It is almost an axiom in breeding that the more characters aimed at in a mating, the less chance, in geometrical ratio, of securing any one of them. Consequently, if it takes from two to four matings to secure winning show birds. What chance is there at the same time

Deem's ARISTOCRAT BUCKEYES

BUCKEYE POULTRY YARDS, EATON, OHIO

to breed a 200 egg pullet as the direct result of an intention to do so?

As you say in an editorial we appear to have always had the 300 egg hen, but didn't know it, and by inference our 200 egg strains, so-called, are individual birds selected by a systematic use of trap-nests.

We, however, do know by actual test that a pen of females with high egg records properly mated, will produce more 200 egg pullets than a similar pen with low records. We also know by experience that, one or more hens each with an egg record of 240 when mated to a male whose mother had a record of 240, no matter how long that line of breeding may have been followed, will produce pullets with all sorts of records, other than 240.

If we produce a pullet that makes a record of 260, from 240 records on both sides, we don't know how it was done and cannot repeat the results with the same parents with any degree of certainty.

It is a debatable question whether we are able, at all, by any means at our command, to actually increase egg production.

To modify shades of color and markings by judicious mating is comparatively easy because we are dealing with visible characters and can estimate results before mating, but we cannot increase the quantity of feathers, or legs, or eyes, or combs. Can we increase the quantity of eggs?

If the above observations are anywhere nearly correct, it follows that there are no real grounds for jealousy between the two systems of breeding. It would probably be wise for breeders of the "Fancy" to use trap-nests, which some of them appear to be afraid of and ridicule. They might make some progress in that way in isolating their best layers, which they could if marked just right, use in the breeding pens.

It would probably be wise for the breeders who select for egg production to abandon the word "utility," which seems to be in disrepute in some quarters and substitute the term "egg record" as more comprehensive and definite in its meaning.

This would differentiate the two lines of breeding, so there would be no earthly excuse for either to tread on the other's toes.

Personally I am thoroly convinced that no satisfactory progress can be made in egg production except under the single mating system which is not practical in breeding exhibition stock under the present Standard.

C. B. ALLAIRE.

San Antonio, N. M.

Likes the Score Card.

Have enjoyed the discussion relative to score card and comparison shows and think many excellent points have been brought out in favor of the score card. For the beginner it is invaluable to know just what his stock scores. Most judges come within one-fourth of a point of each other in scoring a bird, for I have compared the judging of different score card shows and the decisions of the different judges were within one-fourth point of each other.

I remember my first showing some years ago when I was gloriously beaten, but I had a score record of from 92 to 93½ on my birds and the year following I broke into the winning column. But that was my best lesson, that first

THE "COLLINS" IS THE BEST OATS SPROUTER

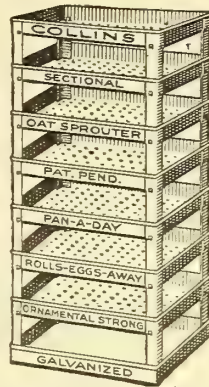

AND IT'S THE CHEAPEST

You readers of the Am. Poultry Journal know as well as I do that it's essential to feed green food to

Make Your Hens **HEAVY** Winter Layers

And To Provide Green Food for Chicks

\$3

You also know that in the form of sprouted oats you can furnish your hens what they need in the way of fresh, tasty, sweet and wholesome green food, and protein, at **Less Cost** than in any other form.

The only point in which you are interested is in knowing which is the most practical, sensible, workable, convenient and satisfactory sprouter. It's the "COLLINS"—made in units, eight individual pans of galvanized steel, 11 x 15 inches, a pan for each day of the week, and a drip pan. These pans fit ingeniously one on top of the other, doing away with the usual frame or stand. The pans are properly perforated to furnish exact amount of drainage to insure sprouting of practically every fertile oat, and to eliminate souring and rotting, and give a more uniform, prolific growth.

For \$3.00 I deliver The Collins Sprouter anywhere east of the Mississippi River, Express or Parcel Post charges paid by me. West of the Mississippi, \$3.50.

Try it ten days, and if it isn't satisfactory ship it back, and I will refund your money. Illustrated descriptive booklet free for writing.

We could use a few good agents. Write for territory.

show, tho I have since showed in many and larger shows.

By the score card system we have the opinion of a judge in black and white, the defects plainly pointed out. The work takes more careful consideration and most of the judges are opposed to it and you cannot blame them. The work is not easy and criticism is their reward in many cases. The small score card shows are certainly feeders for the larger shows. Make these small shows, score card shows and they will boom again where they have hardly paid ex-

penses during the past few years.

Bridgeport, Mich. VALENTINE PETZOLD.

More About Egg Costs.

Have been much interested in the discussion of the "Cost of Producing Eggs," and while I am not an expert poultryman, I am familiar with the how to get cost figures, as I served for twenty years as clerk of costs for large firms, but now have a little farm of my own, which is slowly growing.

In my study of the various figures

submitted by many people and published in the various poultry and farm papers, most of them seem to call anything profit. They fail to charge up a reasonable wage. What manufacturer would do so? If they fail to charge labor, the figures generally shown should be styled "Labor Income" not "Total Profit."

So when the people who have not had the necessary training to figure up costs, look at such a report, they are amazed at the profits and want to go into business. A great many fail, as we all know. Again, the so-called expert make

E. B. Thompson's Imperial Ringlet Barred Plymouth Rocks

At the Premier Show of All the World

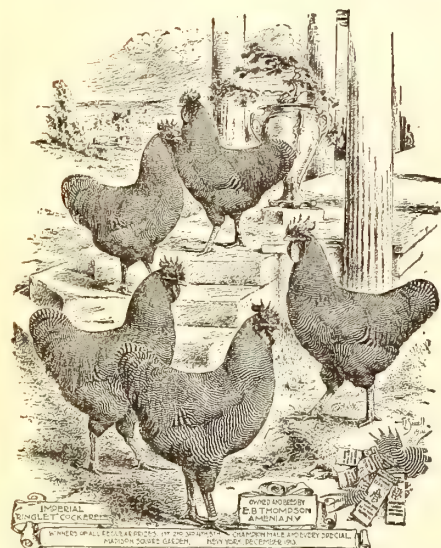

Madison Square Garden, New York

Dec. 31, 1915—Jan. 5, 1916

set a new and supreme standard of winning with a performance record never approached—this record shatters all traditions. (See Back Cover Page.)

The test of quality is the show room and the Supreme Test is Madison Square Garden. It is at this show—and this show only—that the best Barred Rocks in America are exhibited. The Imperial "Ringlets" have an unbroken calendar of successive victories at New York for more than a quarter of a century, winning more than 3 times as many 1st Prizes as any competitor—mark this fact.

Their record the last four years in succession, 1913, 1914, 1915, 1916, is the climax of these unprecedented victories.

The five Cockerels winning Champion Male and all the Ribbons on Cockerels, viz: 1st, 2d, 3d, 4th and 5th Prizes, at Madison Square Garden, New York.

Winning three times as many First Prizes as all competitors combined—every Silver Cup—All Prizes offered on cockerels, viz: 1st, 2nd, 3rd, 4th and 5th, three years in succession; Sweepstakes Champion Male four years in succession; Both Sweepstakes Champion Male and Sweepstakes Champion Female three different years.

I am the only Barred Rock breeder who has won **Every First Prize Offered**, all prizes on Cockerels and all prizes on Pullets, viz: 1st, 2nd, 3rd, 4th and 5th, within the four walls of Madison Square Garden. The Imperial "Ringlets" have won final ownership of every Silver Cup and Trophy that has ever been offered at New York to be won three times—Among them are the **\$100** Challenge Trophy and the **\$100** Association cups.

PRIZES AND SILVER CUPS

have been won by my customers on the Imperial "Ringlets" in more than a thousand show rooms throughout the civilized world—You can win the same laurels.

I will sell you grand exhibition and breeding birds, Cocks, Cockerels, Hens, Pullets and Pens of this richest First Prize Sweepstakes New York blood, mated to produce Prize winners and eggs from the World's Best Matings.

a report designed to make the farmer think he is making money when selling eggs at cost, and very often far below cost. When the poultryman offers a superior article he has a hard time to convince people that his time and labor are worth something.

I am glad you are starting the work of endeavoring to educate the people what to charge for eggs in order to make a profit on producing them

According to the report of one of our Experiment Stations last year, eggs which sold for 20c, only cost \$76.42, or

10½c a dozen when no charge was made for labor. The farmer thus probably thought he was getting 100% at 20c per dozen.

The public in general should be taught the cost of producing eggs, farm raised or otherwise. A similar instance may be found in the production of tobacco in this section. It costs 13c to raise Flue and Bright tobacco. Yet the buyers sometimes only pay 10c. Where does the tobacco raiser come in? He pays his fertilizer bill, a little on his store bill, and starts in to do the same thing

over again. I have no patience with this manner of doing business.

I am unable to understand the position of a poultry magazine editor who is unwilling to look at the proposition squarely as to the actual costs. His greatest opportunity for helping his readers lies in giving the actual facts that they may better conditions and not in leading people to believe there is a great profit to be gained in the production of eggs—which cannot be borne out by facts.

Virginia.

E. B. Thompson's Imperial Ringlet Barred Plymouth Rocks

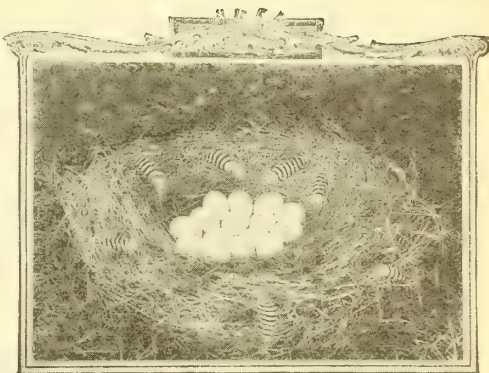

**Are Recognized Thruout the World As
the Leaders of All the Barred Rocks**

**You Are Now Thinking About Eggs to Produce
the Silver Cup and Blue Ribbon Winners
for Next Season's Shows.**

Think of the great satisfaction of winning prizes on birds you raise with your own hands, from the time the chick first sees daylight until the Blue Ribbon hangs on the coop in the Show Room. The delight of winning on a bird you owned all its lifetime cannot be described.

**My Imperial "Ringlets" Will Put You In a
Position to Win at Next Season's Shows.**

You may raise a single chick worth hundreds of dollars and capable of winning in the strongest competition—Hundreds of my customers have done this.

Imperial "Ringlet" Eggs in a perfect nest

My Matings Cannot be Equalled in Their High Quality and First Prize New York Blood Lines

They are the Finest in all America. In my Imperial "Ringlet" eggs you get the best First Prize Sweepstakes New York blood which you must have to win in the strongest competition. You will share with me and have an equal chance of producing the highest quality First Prize birds of the year. The Imperial "Ringlets" have a distinct type, color and barring—their color is one even blue shade and barring, is evenly spaced, narrow and straight across the feather to the skin—they stand out in pattern from all others.

My Eggs Are the Best that Money Can Buy—They Produce First Prize Birds

Mr. E. B. Thompson.

Wilcox, Pa., January 11th, 1916.

Dear Sir:—Just a few lines to let you know what the Imperial "Ringlets" have done for us in the show room this last fall and winter. The Mountain Poultry and Pet Stock Association, of Kane, Pennsylvania, held their show last week. We had 28 birds entered and they were admired by everyone as well as by the Judge; in prizes we took 1st, 2nd, 3rd, 4th and 5th Cockerel; 1st, 2nd, 3rd, 4th and 5th Pullet; 1st, 2nd and 3rd Pen; 1st and 5th Hen; 3rd Cock; Special for Best Pen in Show and Best Hen in Show, also a Special Silver Cup for Best Display in American Class. At McKean County Fair and Johnsonburg Show they won the Blues also. These birds are all from the stock we raised from the eggs we bought of you in the spring of 1914. We have some promising youngsters from the eggs we got of you last spring, too.

Yours respectfully, Nelson Bros.

Plainville, Ind., Jan. 3rd, 1916.

Mr. E. B. Thompson.

Dear Sir:—I will write and let you know that the Imperial "Ringlet" cockerel that I bought of you in December won First Prize at Plainville and Odon, Ind., and from the eggs I got of you last spring I raised seven pullets and seven cockerels; won 1st and 2nd Pullet; 1st Pen; 2nd and 3rd Cockerel. Kindly quote price on one setting of eggs from your best cockerel mating pen.

Yours truly, Fred Lawyer.

I Will Help You to Greater Success and Larger Profits

Richly Illustrated Catalog Upon Request.

EGGS from the finest exhibition matings in all the world,
\$10 per setting; 4 settings \$35; 100 eggs \$60.

Womans Success With Poultry

Helen T. Woods, Editor
A Department for the Exchange of Helpful Poultry Experiences

BREEDING SINGLE COMB WHITE LEGHORNS.

A Contest Article Submitted in Competition for the D. W. Young \$50 Cockerel.

By MRS. ROBT. WEST, Montgomery, Ala.

WHITE LEGHORNS have been in this country since 1853. The first, a trio being imported from Italy by one W. Simpson, of West Farms, N. Y., during that year. The eggs from this trio produced varied effects, some of the stock being Dominique, some blue, while more were pure yellow; all had white legs. In 1868 yellow legs were made a characteristic. The first Whites sent to England was in 1869. They immediately became very popular there and in 1872 eggs were advertised at \$10 per dozen. From the day they landed on American soil, they have grown steadily in demand and popularity. Have had many so-called competitors put forth with wonderful claims "on paper," only to fall under defeat by the White Leghorn as the greatest egg producers and money makers in the poultry family.

White Leghorns hold a place among fowls that the Jersey does among cattle and like the Jersey, they give the largest returns at the least expense. When well fed the surplus does not go to fat, inducing sluggishness, but to the produc-

tion of smooth white eggs which command the highest prices as is plainly demonstrated by the fact that the largest egg farms are stocked with Single Comb White Leghorns, the unmistakable recognized egg machines of the present day. To the small poultryman and general farmer the question of profit is all essential and the question of profit in poultry has been well decided in favor of the White Leghorn. When they are allowed a free range, they will pick up a large part of their living during the greater part of the day. Under ordinary circumstances it is said that the cost of raising them to maturity is about one-half that of the Asiatic varieties and proportionately less than that of the American breed. If this is true, and one secure a good laying strain of White Leghorns, there can be no question that the profit side of the ledger in the transaction will be more favorable to the White Leghorn than it would have been had some other breed been selected.

The objection often raised that owing to its small size, the White Leghorn is not a good table fowl, cannot well be sustained, for if a White Leghorn be properly fed and otherwise cared for and put in condition for the table, there is none to excel it, with the possible exception of the game. If our family happens to be large it may take two Leghorns to supply the table, where it might have taken only one Brahma, Cochon or

Plymouth Rock. If the cost of producing the two Leghorns were equal only to that of producing the Brahma or Plymouth Rock, and in the meantime would receive twice as many eggs from the two Leghorns, why could we not well afford the two rather than one of either of the others?

SHAPE CHARACTERISTICS.

The cock should be trim, active and graceful, plump and broad at the shoulders and tapering towards the tail. He should have a close fitting plumage and the tail should be well balanced on a fair length of shanks and thighs. The breast should be full, well curved, prominent and carried well forward. Neck rather long, well arched and head carried erect. Back rather long, slightly sloping downward from shoulder to center of back, rising in a gradual concave to the tail. The tail should be rather full, carried well up but not upright. Wings long, well folded and tightly carried. Legs should be bright yellow. Hackle and saddle feathers abundant and flow well over shoulders and saddle. The ideal head is moderately short and deep with bright red eye and red face. The comb must not be too large, but straight, firm and even on the head, bright red and with five well defined points. The hen is not so graceful as the cock, but owing to its lighter weight may appear more sprightly. Head should be small, short

FIRST PRIZE COCK MADISON SQUARE GARDEN DEC. 31, 1915 - JAN. 5, 1916
BRED AND OWNED BY D.W. YOUNG, MONROE, NEW YORK.

FIRST WHITE WYANDOTTE CKL.
PHILADELPHIA - Dec. 1912
CARR BROS. Vineland, N. J.

and deep, with moderately curved beak. The comb should be medium size with the front standing erect, including first point. Ear lobes should be thin, free from wrinkles and fit close to the head. The wattles medium size, thin and rounded, fine in texture. Breast round and full, neck long, slender and gracefully arched. Back long with a long tail carried well up but not upright, with a reasonable spread so it does not have a pinched appearance.

My first experience raising fine bred chickens was when I was a mere girl on the farm. I had Barred Plymouth Rocks and when I came to town my first

J. R. Parks and grandson. Mr. Parks is one of the oldest utility breeders in America today, as he was one of the originators of the Parks Strain Bred-To-Lay Barred Rocks. Now bred by J. W. Parks and his son, Altoona, Pa.

sight of a Poultry Exhibition was eleven years ago, when I purchased several poultry journals and ordered some S. C. White Leghorn eggs from a northern breeder, advertised in the AMERICAN POULTRY JOURNAL. I at once became interested in the White Leghorn by being attracted by their beauty, grace and vigor, and I have ever since bred the Single Comb White Leghorn. There wasn't any other breeder near here that knew any more than I did about mating, so I had to gain my knowledge by experience, and not until three years ago did I know just what kind of mating to produce the low tail, graceful, kind of Leghorn, that attract the most attention in the show room. I have learned to mate so as to produce the birds that are so much in demand; those that will produce the most eggs and keep their grace and vigor. I pick the females first that I want as breeders, put

Oat Sprouter \$2

For \$2.00 you can build the simplest, most efficient, easiest to operate and very best oat-sprouter ever constructed. A boy can make one in an evening with no tools but a saw and hammer. Cost of operation for a 40-hen size less than 7c a month. There are thousands in successful operation. Plans with plain directions for building, 25c postpaid.

BIRDS — Barred Plymouth Rocks — EGGS

Indianapolis, 1914 and 1915 State Champion Cockerel; 1st pen; 2d pen; 1st cockerel; 1st pullet; 2d and 3d hen. A limited number of birds for sale. Mating lists on application.

W. H. GODDARD & SONS Orchard Place RIVERSIDE, MUNCIE, IND.

Do you want to get twice as many eggs? See announcement on page 449.

them in four pens, ten to each pen, and for one week I cull out by shifting females from one pen to another until I get the birds together that I call my 1-2-3-4 breeding pens.

SELECTING BIRDS FOR EXHIBITION MATING.

In selecting them I get the ones that show such points as the Standard of Perfection calls for as near as I can get them out of the number of females. I pick ten of the best, one that has a broad saddle with medium spread to tail, and right here is the secret of breeding the Leghorn with the curved back without the sudden stop right at the root of tail. If the females have a narrow tail section you are wasting time trying to breed Leghorns for exhibition purposes. You have absolutely got to get the broad saddle, plenty of cushion to produce the desired results.

The male bird for my best breeders I use cock birds. I never breed cock-

erels for exhibition birds the first season or so. Many times cockerels go wrong, lose their type, get white in the face, and by cooping cockerels up for Fall show confinement will make them drop the tail carriage; in fact, I can take a bird that I wouldn't breed from the coop train him until he will win at most shows, as many judges only see a bird's back, especially the Leghorn, as no other breed has made such progress in developing the type which the Standard of Perfection calls for. There is one Eastern breeder that has done more to develop the type of the Leghorn, and all breeders of Leghorns must take off their hats to him, as his name will go down in history as the greatest Single Comb White Leghorn breeder in the world, and it's all due to his skill that he has made it possible for other Leghorn breeders to produce nearly what the Standard calls for.

The male bird must by all means have

a full breast and not a hollow look from his beak to thighs. He should have moderate height and not the short dumpy legs. He should be free from white in face, and wings should be well folded up, should have lots of vigor, full of life, above all things. The back should be a good length so as not to have the Wyandotte shape. A Leghorn is a bird of curves, but should be long graceful curves, not short and dumpy; the saddle should be wide, heavily feathered and the saddle and tail section apply as much to the male as the females, if you are wanting type. You must absolutely use as a breeder a male bird with broad saddle to get the curve and the angle of 45 degrees to the tail section. By using this mating as described above, using pure white birds you need not worry about the results for the next season if properly fed, kept free of lice and mites so as to rush to maturity.

Wisconsin Wins in big Hatching Contests Every Year

Year after year these unbeatable Wisconsin Incubators have proved their superiority over all other machines regardless of price. Prize-winning hatches like those shown here prove beyond a doubt that Wisconsin Incubators are the best for the money in the

world. They prove you can't get bigger, better hatches even if you pay twice the price. So why pay more? In addition to their wonderful hatching dependability, I want to prove to you that Wisconsin Incubators are also the best built, most durable and best equipped machines in the world for the money.

BOTH 130 \$10

EGG Incubator and 130-Chick Brooder

Machines for only

PRIZE-WINNING HATCHES

3rd Year

Mrs. J. W. Mize, Vaughan Mills, Ky., won in the Successful Farming Contest, hatching 208 chicks from 208 eggs in two settings.

2nd Year

Mr. C. B. Arter, Atwater, Ohio, won in the Successful Farming Contest, getting 181 chicks from 181 eggs in two hatches.

1st Year

Mrs. J. Mc Mahan, Veedersburg, Ind., won in Missouri Valley Farm Hatchery Contest, hatching 125 chicks from 125 eggs.

4th Year

Mr. F. H. Lewis, Montrose, Pa., won in Successful Farming Contest, getting 96 chicks from 96 eggs one setting.

5th Year

Mr. C. C. Rich, Russiaville, Ind., won in Successful Farming Hatchery Contest, getting 94 chicks from 94 eggs—the first hatch he ever made with any incubator.

All Won With This WISCONSIN \$10 Outfit

Find out what an Incubator is made of before you buy. If you will write for my free catalog, I will gladly mail you a sample of the lumber we use so you can see the quality and compare it with others. Then you will know which machine is best; which will last longest and which will give you most value for the money.

Why Take Chances? Wisconsin Incubators have double walls.

I build the outer walls of my Incubators of genuine California Redwood—costing four times as much as materials some manufacturers use—and the inner wall is of insulating board with dead air space between the walls—hot water heat, double glass doors, copper tank and boiler, self-regulating. Roomy nursery under egg tray. Incubator is finished in its natural color showing the high grade California Redwood lumber used—not painted to cover up inferior material. Both machines shipped complete with thermometers, lamps, egg tester and book of directions, all set up ready for use when you get them. Freight paid East of the Rockies.

I Give 30 Days' Free Trial—10 Years' Guarantee (6)

Order Direct from this Advertisement—Money Back if Not Satisfied

You can send in your order direct if you wish and save time. Remember you can have 30 days trial with the understanding that if you are not perfectly satisfied, simply write me—send the goods back and I'll not only return your money, but pay the freight charges and charge you nothing. I have been advertising in this paper for years. The publishers know me and know I do just as I agree. I am undoubtedly making the readers of this paper the most remarkable offer on high grade incubators and brooders that has ever appeared in this paper. You take no risk in ordering a Wisconsin direct from this advertisement. Don't buy any other until you get my free catalog. Write for it today.

Thos. J. Collier, Mgr. WISCONSIN INCUBATOR CO., Box 52 Racine, Wis.

Recent Inventions for Poultrymen

By Lester L. Sargent, Patent Attorney, Washington, D.C.

A NEW brooder, invented by Andrew Essig, Cleveland, Ohio, has a heat-receiving chamber in its upper portion, which receives and distributes the heat from the lamp in the center of the brooder to the outer or adjacent brooder chamber, where the chicks hover. The hover is conical. A hot-air flue is located at the center and has openings thru which the hot air percolates to the inverted cone member which extends nearly to the roof of the hover and distributes the heat. The brooder is provided with the usual thermostat. This is arranged to unclog the central flue when the temperature exceeds the prescribed degree. Patent No. 1,169,071.

A poultry duster invented by Edward F. Hudson, Wilkes-Barre, Pa., applies a germicide powder to the poultry. The device consists of a hopper with an open

mesh sheath at the bottom which receives the powder from the hopper and sifts it under the body of the fowl, when an agitator at the mouth of the hopper is moved. The patent is No. 1,167,561.

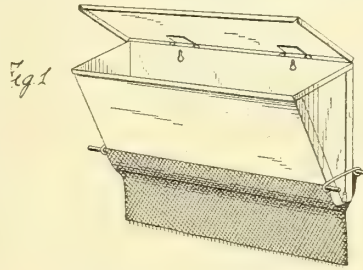

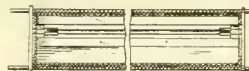

Fig. 2

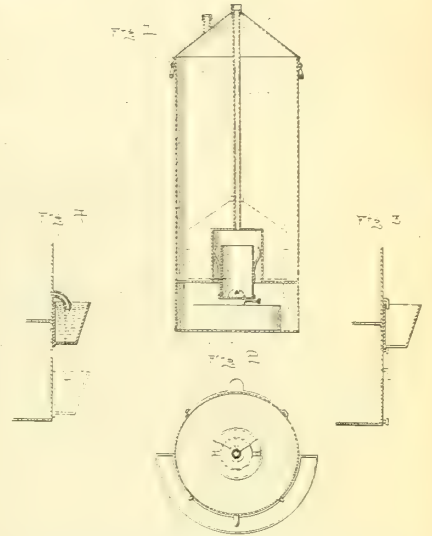

Fig. 3

Poultry Duster, patented January 11, 1916, by E. F. Hudson, Wilkes-Barre, Pa. No. 1,167,561.

A new poultry fountain with a lamp for preventing the water from freezing has been devised by Oscar A. Dietsche, Gladstone, N. Dak., where there is much difficulty in keeping ice out of the poultry fountain at this time of the year if they are not heated. The lamp in this fountain is at the center of the base portion. A chimney extends up thru the center of the fountain. The water is fed from the main chamber of the fountain to a cup thru a tube that terminates below the water line of the cup. The patent is 1,168,489.

Poultry Fountain, patented January 18, 1916, by O. A. Dietsche, Gladstone, N. Dakota. No. 1,168,489.

Suggestions for the Back Yard Poultry Keeper, Being the First Prize Article in American Poultry Journal Contest.

By C. HARRIS SCOFIELD, Springdale, Conn.

WE CAN, all of us, find much to read on how to raise chickens by the hundred, thousand, or even ten thousand, but the little fellow—the man who wants to raise only a few hens for his own use—is sadly neglected; and yet I presume such small poultrymen constitute the great majority of readers of poultry literature. The object then of this article is to give the experience of one who has raised from thirty to fifty chickens a year for the past eleven years.

Perhaps a statement of what I have recently accomplished may better entitle me to your consideration of how it was done. In 1913, I hatched 52 chicks and raised every one; in 1914, I bought 36 day-old chicks and raised all but one, which was killed by the door of the brooder house falling upon it; in 1915, I raised 23 out of 24 day-old chicks. Such a record should at least prove that my methods cannot be radically wrong.

Having raised hen-hatched, incubator-hatched, and bought day-old chicks, I can say without reservation that, for the small breeder, the last method is prefer-

able, if one is careful to get stock he knows is of a strong, vigorous strain. I have never gone very far from home for my day-old chicks, as I find it safer to see the stock they come from, and I believe that 75% of my success is the result of having nothing but healthy chicks to start with. The objection to this method for a large grower is the expense, but the added cost for anything

York City where the thermometer may go away below freezing at this time of the year, *without artificial heat*, would seem impossible to many breeders, yet this is what I have done—moreover, I have no elaborate manufactured hover or brooder-house “warranted better than the mother hen”.

My hover is a wooden box, 24" square, made of $\frac{3}{4}$ " lumber, an open-

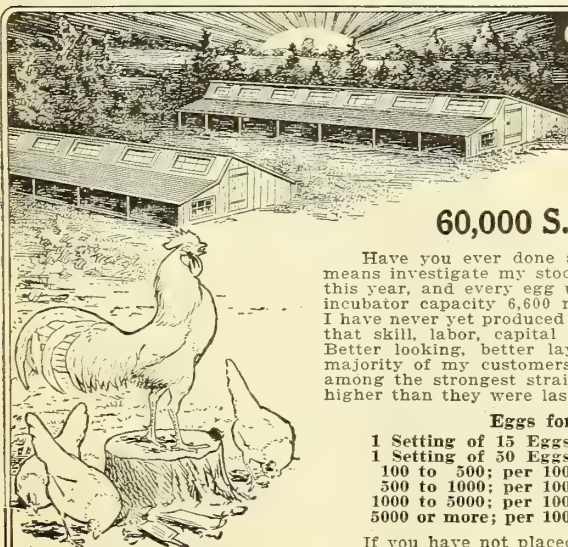

Partial view of the Parks' Poultry Plant, Altoona, Pa., where is bred the well known strain of Parks' Bred-to-Lay Barred Plymouth Rocks.

under 100 chicks is more than offset by the labor and attention saved; moreover, poultry as a side line is very apt to be slighted at times, while incubators and setting hens will not allow any lapses of attention.

To state that chicks hatched in March can be raised in the latitude of New

ing for the chicks to pass in and out, and without any top. A frame of $\frac{3}{8}$ " x 1" stock is provided, just large enough to drop into the box and is held in position by four nails placed in the sides of the box just high enough to clear the chicks' heads (these nails have to be raised slightly as the chicks grow in size.) A

“SUNLIGHT” POULTRY FARM S-C-W LEGHORNS

Greatest Known Layers. (D. W. Young) Strain

60,000 S. C. White Leghorn Baby Chicks For Sale in 1916

Have you ever done any business with the Sunlight Poultry Farm? If not, you should by all means investigate my stock and business methods. I shall operate two Candee Mammoth Incubators this year, and every egg used will be from my birds here on the farm. Again I have increased my incubator capacity 6,600 more and know that I shall be taxed to the limit for months this season. I have never yet produced half enough chicks to supply the demand. I am breeding the best Leghorns that skill, labor, capital and experience can produce—such Leghorns as 98% of the public desire. Better looking, better laying and stronger stock cannot be bought anywhere at any price. The majority of my customers raise almost every chick, and some of them raise every one, as they are among the strongest strain of birds you can find in America today. My prices for this year are no higher than they were last year. Prices are as follows:

Eggs for Hatching

1 Setting of 15 Eggs	\$1.50
1 Setting of 50 Eggs	3.50
100 to 500; per 100	6.50
500 to 1000; per 100	6.00
1000 to 5000; per 100	5.50
5000 or more; per 100	5.00

Day-Old Chicks

25 to 50 Chicks	\$.14
50 to 100 Chicks	.13
100 to 500 Chicks	.12
500 to 1000 Chicks	.11½
1000 to 5000 Chicks	.11
5000 or more Chicks	.10

If you have not placed your order, right now is the time to place your order so as to not be disappointed.

Sunlight Poultry Farm's chicks are livable chicks, as well as quality chicks, because they are bred from quality birds that have vitality, stamina and the best laying quality bred into them. They are the chicks that will please you. Not a yarded breeder on the farm, but just a large flock of breeders out on unlimited range, housed in open front houses. Is it any wonder that we can get such fertility on our eggs and such strong, healthy chicks? If you have not placed your order, right now is the time to place it so as to not be disappointed. Orders will be booked for future delivery on receipt of one-fourth the purchase price; the balance to be sent before order is shipped. Cocks, cockerels, trios and pens for sale at all times. Remember, **The Sweetness of Low Prices never equals The Bitterness of Poor Quality.** Write your wants. Catalog free. Satisfaction guaranteed.

piece of muslin is tacked on the upper side of this wooden frame in such a manner as to allow it to sag slightly in the center. Then by taking some cheesecloth and cotton-batting and making two small quilted comfortables the size of the frame and about 1" thick, your home-made, heatless, "better-than-the-hen" hover is complete. This hover is placed in a brooder house, specifications of which can be found in the catalogs of any of the large brooder-house manufacturers. Mine is made of 1" cypress and is 3'x6' in size, 2' 6" high in back and 3' high in front, with a floor 6" from the ground. Two hinged glass windows in front give plenty of light and warmth thru the day, and an addi-

the hover, and this my hover will do. The only objection is, that there being no heat to induce the chicks to go into the hover, they must be taught by putting them in the first few nights until they get the habit.

In feeding I have followed the system prescribed by the New York State College of Agriculture at Cornell University, Ithaca, N. Y., and published in Bulletin No. 90, Department of Poultry Husbandry, in so far as I am able to conveniently secure the different foods specified, and I have had very good results as compared with others who are less systematic. Contrary to the advice of several breeders, I keep charcoal before young chicks almost from the start

6x8 ft. Piano Box Poultry House. Dotted lines show position of piano boxes.

tional frame covered with wire netting to replace one of the windows on warm days, make it possible to give the chicks the benefit of direct sunshine when the ground is too wet to let them run free.

I have found this outfit sufficient to keep chicks warm in almost any weather. On rare occasions, when the thermometer has gone to zero, I have had to take hover and chicks into the house, but this has never happened more than once or twice a season and is little or no trouble. The idea, of course, is that the heat from the chicks' bodies is sufficient to keep them warm all night if retained in

and have never seen bad results. I have also learned that finely cracked shells cannot be given too soon. I put it before them as soon as I start feeding any solid food, as chick feed or other small grain.

In raising chicks, I have tried to keep expenses at a minimum and my poultry house is no exception. I have built a piano-box house which, for convenience and looks, I believe to be better than anything I have seen published of this kind. I got two piano boxes, took the fronts and tops off and set them 2' 6" apart and cleated them together. I then

Feeding Spices to Poultry

It is no new thing to feed condiments, spices, and drugs to induce egg production, especially during the cold winter months. Such artificial stimulation has been practiced by poultrymen for many years, but invariably they would discontinue the use of stimulants because of the harmful effects on the fowls.

Utility men who wanted to get nothing but eggs when eggs could be sold at a high price would stimulate their birds by these artificial methods, and then dispose of them because they were of no further use. Generally speaking, this condition existed wherever poultry was raised for profit, prior to 1909, when a famous poultryman in England, Capt. Ralph R. Allen, had his attention called to the use of Mustard.

At first Mr. Allen looked upon the use of Mustard in the same light as he did the use of other condiments, spices and drugs, many of which he had tried in an experimental way without satisfactory results, and had given public expression of their harmful effects. He was persuaded to experiment with Mustard, which he did with satisfactory results. The details of his experiment have been issued in booklet form, and they are interesting to all poultrymen who desire to get an increased egg production with a very small increase in cost, and without any harmful effects to the birds.

There are several kinds of Mustard flour, just the same as there are several kinds and grades of wheat flour. Mustard flour is milled from the Mustard seed, and there are good and poor varieties of Mustard, just as there are good and poor varieties of wheat. The quality of the flour depends upon the quality of the seed and the process of milling. The first experiments were with a Mustard flour not milled for use with poultry, and the Poultry Mustard in use now is especially prepared and the result of careful experimenting, since Mr. Allen made known to the world its beneficial effects.

The original Poultry Mustard in America is that manufactured by The R. T. French Company of Rochester, N. Y., who carefully followed Mr. Allen's experiments, and, with sixty-five years of Mustard making experience, have perfected a Poultry Mustard stronger than the ordinary commercial Mustard bought for household use. It is a pure Mustard flour made from carefully selected imported Mustard seeds. Thousands of poultrymen have used French's Poultry Mustard with very satisfactory results. The gospel of Mustard feeding is spreading rapidly, and if you have not carefully studied this subject you should get the 32-page booklet, giving the details of Mr. Allen's experiment and some other articles on the use of Mustard for poultry.

The feeding of mustard has other merits than to promote increased egg production, and you will be interested in its relation to fertility, stamina, etc. The booklet will be sent free.

231 Salem Street - WAKEFIELD, MASS.

raised what was to be the front to 6' 6", leaving the back 5' high. The lumber taken out was sufficient to fill in one side, make a door for the other side, complete the floor and put on a shed roof, the only additional lumber required being three pieces of 2x3 to support the roof. A 3'x4' opening was left in the front, covered with wire netting and fitted with a removable muslin-covered frame for cold weather. The outside of the building was then covered with tar paper held on by lath so placed as to give a paneled effect of good appearance. This gave me a shed roof house 6'x8', with headroom enough to stand upright in the front (the dropping-board and nests being in the back) at a cost of slightly less than \$6.00.

HOW SHALL WE PACK EGGS FOR HATCHING?

Bad Results from Poorly Packed Eggs. Properly Packed Eggs Will Carry Long Distances and Give Satisfactory Results. Second Prize Article in American Poultry Journal's Monthly Contest.

By E. SWEET, Pierre, S. Dakota.

EXPERIENCE has convinced me that many breeders are lax in their methods of packing eggs for hatching for shipment to distant buyers. When a breeder takes great pains to improve his flock, working at it sometimes for a great many years, and then incurs the expense of advertising and finding customers, it is a sad thing to learn that his efforts have resulted in failure because the eggs sold for hatching were poorly packed for shipment.

I do not believe breeders, especially those of limited experience, realize that a good part of the complaints of poor hatches are the direct result of their own carelessness in packing hatching eggs. They usually attribute the misfortune to ignorance or dishonesty on the part of the customer and grudgingly set about to satisfy the complainant. Surely when transactions of this kind are on the square, any cause of loss to either party that can be avoided, should be avoided.

I realize, of course, that in very many cases, even with the greatest care on the part of the seller, things will sometimes go wrong. Expressmen may carelessly or accidentally expose the package to extreme heat or cold, or may drop it, or otherwise subject it to rough handling. Even in the hands of the purchaser many things may happen to prevent a satisfactory hatch. Incubators, both natural and artificial, often "strike" or fail in some way to perform their very important part of the undertaking. The attendant may err, for he is unmistakably human. He may not know how to set a hen or how to make her sit. A study of the problem of the hen maternally inclined calls for a goodly amount of patience and forbearance. The order is a large one and sometimes cannot be filled. But in the experiences I am about to relate I have endeavored to make due allowance for all such contingencies.

A few years ago I sent an order to a breeder in New Hampshire for a sitting of White Wyandotte eggs. Ten days later I received the eggs—seventeen of them—at the end of their two thousand mile journey. Each egg had been carefully wrapped in paper and inserted in a ball of excelsior and were then packed

Baby Chicks?

Are you acquainted with The Lord Farms, or The Everlay Farm, which is one and the same thing? Sit right down now and write for our 104-page catalog, all about

S.C.W. Leghorns

Do you know that we are selling more chicks than any other breeder in this part of the country? The reason is, we hold our old trade and continually add on new. Our prosperity is a proof of the satisfaction our customers are getting, and show that we have good Leghorns and sell at popular prices.

Let Us Give You a "Successful Tip"

Everybody makes a rush for March and April chicks, which is the proper thing to do for the big breeds, but if you are after the biggest egg records possible from Leghorns, buy May hatched chicks. The biggest laying records on this breed are all practically made from May or later hatched Leghorns. It pays to be slow some times. For the past five years we have carefully looked up the records our customers have made in quantity of egg production, from birds hatched from February to August, and nine times out of ten the later hatched chicks have averaged the most eggs during their pullet year. We have sold chicks as late as July 8th that laid 252 eggs. The pullets that have been laying 50% to 65% this winter were hatched after the 15th of May.

Book your order now for May hatched chicks

the best month in the whole year for Leghorns. We can take your order for either 25 or 10,000 chicks, and still have some dates open for March and April. Hatching eggs in any quantity, at half the price of chicks.

in a wooden box about 14x10x8 inches, which was lined with clover leaves and oat straw, and had some of this material tucked into spaces between the excelsior balls. Thirteen of these eggs went under one hen and the remaining four under another with seven R. I. Red eggs to complete the nestful.

The hen over the thirteen became interested in grand opera the third day and sang herself back into the laying pen. Another old motherly hen was induced to settle down over the stone cold eggs with a loss of one day's time. But on the twenty-second day I had eleven very lively little Wyandottes. I gave the breeder all the credit for that hatch, which was my first experience with eggs purchased from a distance.

Another year I hoped to duplicate my good fortune with far-east eggs and ordered from a breeder in Massachusetts, and another in New Jersey. I ordered a sitting of Rhode Island Reds from each. In due time both shipments came. Both were packed alike, fifteen eggs in strawboard boxes, with bran only to take up the jar. The eggs were rested one day on arrival, then put under hens according to the usual method. Two other hens were set the same day in the same place and in the same manner on eggs from my own yards, as it seems a waste of time to start less than three of four hens at one time.

The hens on eggs from my own flocks hatched twenty-three chicks out of twenty-six eggs. The hens on the "Atlantic Coast" eggs hatched two days late, one little Red pullet from a shell marked with a leg band number, and with the number 216, indicating the egg record of the hen that laid it. Probably I received my money's worth in this case, for the pullet lived and lived up to her family's expectations. But surely the hatch was a decided disappointment and I reported so, especially to the New Jersey "bred-to-lay" breeder from whose eggs the lone pullet didn't hatch. I examined the unhatched eggs and found their contents mixed up and in a fluid condition. Possibly the express company's hired man somewhere misused these plainly labeled boxes of eggs for hatching, but I could not help thinking that the method of packing was all wrong. I went to the express agent about it, but he could do nothing for me. However, I knew the driver of the express wagon and one day soon after the disastrous hatch, he came in to my office with a law book packed in an almost identical manner, being the same shape, size and general appearance as the "bred-to-lay" egg package had been. He settled my doubts.

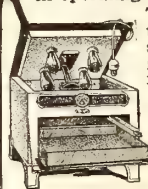

"Say, d'ya know, I thought them there eggs you got awhile back was law books, till I took 'em out in the light and see they was eggs. There's law books coming thru here in this size package all the time."

Later that same season I received two straw-board boxes of hatching eggs from a breeder in Arkansas who had made a good showing in the big laying competition in the "Show Me" state. These came by parcel post prepaid at six plunks per box. Four eggs were broken on arrival. After three weeks and three days lost time on the part of two faithful old biddies I buried the remains, shells and watery contents beneath the ash heap. I did not interview the postal clerks to find whether they and the express driver agreed, and I did not form a very good opinion of the Southern breeder's knowl-

Hatch Chicks The Modern Way

Hatch 'em by electricity

This energizing force enables you to hatch chicks with but a fraction of the labor and risk involved in operating other machines.

The control of heat, moisture and ventilation is absolutely dependable. No guessing, no watching, no filling of lamps and trimming of wicks. The operation is perfect and insures a strong, vigorous chick from every hatchable egg.

Lo-Glo Electric Incubators

Make the hatching of chicks a real pleasure. These perfect machines are all metal, fire-proof, odorless, sweet and sanitary. Handsomely finished and may be operated in any room, store or office. Many users place them in the parlor or dining room. They're simple, practical and efficient. Sizes from 50 to 400 eggs. Successful, no worry, hatching insured by doing it electrically. Fully explained in our booklet.

Lo-Glo Hovers successfully carry on the splendid development of chicks started in the right way by our incubators. Sizes 50 chicks and up. Write for free booklet J.

Tells why chicks die

E. J. Reefer, the poultry expert, 3813 Reefer Bldg., Kansas City, Mo., is giving away free a valuable book entitled, "White Diarrhoea and How to Cure it." This book contains scientific facts on white diarrhoea and tells how to prepare a simple home solution that cures this terrible disease over night and actually raises 98 per cent of every hatch. All poultry raisers should certainly write Mr. Reefer for one of these valuable FREE books.

TOWN LOT POULTRY KEEPING

By D. D. Cavanaugh

Contains over seventy illustrations and plans of every device a poultry man needs. Complete instructions for building Colony and Poultry Houses, Automatic Release Doors, Trap Nests, Shipping and Exhibition Coops, Hot Water, Hot Air and Fireless Brooders, Automatic Exercisers and Feeders, Troughs, Water Fountains and many other useful devices; also tells how to Produce Winter Eggs, Compound Your Own Food Rations, Produce Feed at 20 Cents a Bushel, Make a Brooder for 1,000 Chicks at a Cost of \$5, How to Brood Chicks Artificially, How to Mate Fowls for Line Breeding, How to Select the Most Profitable Breeds, How to Prepare Fowls for the Show Room and Cure All Defects. Price, 50 Cents a Copy.

Poultry Common Sense

By Henry Trafford

Containing feed formulas of all kinds, general principles in breeding, home treatment of poultry diseases, natural and artificial incubation in addition, to a complete

YEARLY PEN, EGG AND HATCHING RECORD

These copyrighted records are the result of the combined experience of many prominent and successful poultrymen, and they are the simplest and most complete blanks ever devised. Price of "Poultry Common Sense" with records, 50 cents.

Poultry Keeping in a Nutshell

By Henry Trafford

An illustrated book invaluable for beginners, as it covers every phase of the poultry business in a thoro and condensed manner. If followed carefully you start on the road to success. Price, 50 Cents.

Make Your Poultry Pay

If can easily be done by following **The Briggs Method**, the latest and greatest help for poultry raisers in this new fifth edition of his valuable book, **Profits in Poultry Keeping Solved**, Edgar Briggs tells his wonderful secrets and how he made \$350.00 a month, from 500 Hens.

Briggs did it—time and again. It was no mere accident. Every hen on his place had to pay 70c a month profit, \$8.40 a year, or off went her head. The Briggs System explains how Briggs did it and how you may do it. The simplicity of the Method is truly amazing. Even a few hens will pay proportionately.

Other subjects the Briggs Method covers are: Poultry silage; raising ninety-five per cent of all chicks hatched, running an incubator, erecting the poultry plant, diagrams, pictures, getting early hatches, raising late hatched chicks, getting a large egg yield every month, breeding, feeding, moulting, duck culture, turkey raising, dry mash for little chicks, formula for lice killer, preventing and curing roup, cholera and other bowel troubles, and numerous other secrets of value. Price, \$1.00.

Every Duck Breeder everywhere, beginner or experienced, should possess a copy of the new and enlarged sixth edition of Rankin's

DUCK CULTURE

By James Rankin

Greatest Duck Book Ever Published
100 Pages and Fully Illustrated

Covers every point in incubating, hatching, breeding, feeding, housing and marketing of every variety. Gives Rankin's famous feed formulas. Question Bureau contains 50 questions and answers. Highly authoritative. Price, 75 Cents.

All About Indian Runner Ducks

Latest, most practical and reliable book published on **The World's Greatest Egg Producers**.

The author of this valuable book is Mrs. D. O. Teasley, a duck breeder of national reputation, assisted by Mrs. Andrew Brooks, Mrs. U. R. Fishel, Mrs. Geo. E. Simpson and others, all duck raisers of practical experience, who have been very successful.

This book has separate chapters on the American Fawn and White, the English Penciled and the Pure White Runners, giving the relative merits of each.

Partial List of Contents

Origin and history; the three varieties—English Penciled, Fawn and White and White; claims for the Indian Runner; incubation and hatching; brooding; feeding and care; houses and housing; mating; marketing; questions and answers; duck don'ts, and experiences of duck breeders. Price, 75 Cents.

edge of approved methods of packing eggs.

In March, 1914, I received during a spell of chilly weather fifteen eggs from a Canadian breeder. The basket containing the eggs was split oak, and it had a handle. The eggs were in a fifteen compartment pasteboard box, with bran filling the spaces to take up jar. Excelsior had been packed in the basket and around the box. A piece of burlap covered the top of the basket and there was a pad of excelsior between it and the box of eggs. Not an egg was cracked. It was very evident that great care had been taken in the packing and I had a good hatch. Every chick was strong and grew satisfactorily.

When the 1915 hatching season rolled around I determined to try to profit by the past. I bought a sitting of R. I. Red eggs from a well known Hoosier breeder who advertised his careful method of packing eggs. His method appealed to me. When the package came I must say it was a model of art. Each egg was wrapped in paper and fitted snugly in its compartment in a cardboard box. The box containing the eggs was placed in a large split oak basket, and excelsior was packed tightly all around and above and beneath the egg box. Cheese cloth had been fastened neatly and firmly over the opening and between the cloth and the excelsior was a thick layer of paper, such as is used to wrap light hardware, crumpled and tucked down the edges of the basket. It was somewhat of a chore to unpack the eggs—but of the hatch, the hen broke three eggs, one was not fertile—eleven chicks hatched. I was not surprised, and you may be sure I wrote the breeder and commended his method of packing eggs. I raised every one of the chicks.

Later, mindful of the past, I ordered thirty eggs of a breeder and specified just how the eggs should be packed. Evidently the method of packing requested was not the one in use by this breeder, as the condition of the container when received showed great haste in filling and there was no handle on the basket, but the eggs came thru in fairly good shape and sixteen chicks hatched and grew like weeds.

The foregoing experiences simply go to show that certain facts must be borne in mind by the breeder who would give satisfaction in shipping eggs for hatching.

1. Egg shells are fragile and the contents very delicately adjusted.

2. Heat or cold, but especially rough handling, seriously affect the hatchability of eggs.

3. Paper is protection against temperature, while excelsior or straw and a split wood basket absorb knocks and jars.

4. The container should be distinctive so as not to be likely to mistaken for non-fragile merchandise.

5. I believe the method adopted by my Hoosier friend described above most nearly fills all requirements.

The wonderful uniformity of type and attractiveness of our entire exhibit was the talk of the show. No breeder exercises more care in mating and this tells the tale of our success and makes it possible to breed them better each year. Never have we been able to put in our breeding pens the superior quality found this year. We have a line that reproduce, which means the kind that win. Eggs, \$5.00 per setting. Write for mating list and book orders early.

Good Things for Everybody

Helen F. Woods
Editor

NOT long ago there appeared in the daily papers an appeal to the generous minded to assist in the raising of a \$50,000,000 fund for worn out pastors of the Christian churches. The report stated that \$67,000,000 was really needed at the present time to take care of worn out ministers of the gospel and their families and an itemized account of the needs of each denomination in this respect followed.

While it is altogether probable that such a need exists, in view of the vast army of poorly paid ministers, it is nevertheless a matter which will bear inspection, though perhaps not more so than dependent conditions among other classes of workers. Why there should be a preponderance of worn out pastors in comparison to workers in other callings is difficult to understand. The pastor occupies an unique position among the people. He has more time and supposedly more education at his disposal than the average citizen. He has better rates on many commodities than most of us.

The matter of becoming dependent is to a great extent a preventable one. Health, in most cases, may be lost or kept as the individual decides, or exercises control over himself. And the ability to be helpful and useful should increase as the years pass. Undoubtedly there are lines of work which may be better performed by a youth than by a man of seventy, but it seems reasonable to suppose that a man in, say fifty, sixty

or seventy years should accumulate enough of value as to what it really means to live, to make him invaluable as a leader, or model or helper to the generations coming after him, at least to the extent that he need not fear the discard heap.

On the other hand, if we have not in the first half of life acquainted ourselves with the things of value in life, the remaining years must of necessity become more or less of a burden to others and a desert waste to ourselves.

In fifty years—or less—is it not within the scope of human ability to grasp sufficient of life's meaning or purpose to fit the least among us for some really helpful, constructive work which will aid those who come after us? With the right use of our faculties, and time, and a reasonable regard given the essentials of health, it would seem that the years following the half century mark should prove altogether more helpful and useful to humanity in general than earlier years, and there is reason to believe that workers who have given heed to these conditions may even increase their financial remuneration accordingly with the years. Barring accidents, there is grave reason to believe that dependents in whatever field are largely self-made dependents. There is work enough, and room enough for the workers, and no man, unless he be a helpless invalid, need be dependent upon a fund for "worn-outs". The early part of life should act as a school in which we may

fit ourselves for worth while accomplishment in after years.

There are those among us who fail not at the slightest provocation to register a complaint against the weather. If it is bad, it is "intolerable," and if it is particularly delightful, "watch out we are going to catch it." A good day is somehow, and for some unknown reason, always labeled as "a weather breeder."

A woman told us last week that the days being so short, her washing, white as the newly fallen snow at great sweat of brow, was left out over night to dry. At bed time the sky was clear and cloudless. Before morning a high powered blizzard swept over the land and carried her washing before it. It was weeks before she could pick up the pieces of clothing scattered thruout the community. Here, indeed, was cause for "weather talk."

True, the weather is not to be depended upon and its whimsies are trying. But, while on the subject, we might as well honestly admit to ourselves, that even when the weather man does his worst, and it is not fit for anything else, it is always good for work! To be sure there are certain kinds of work which cannot be conveniently done on a bad stormy day. Husking corn is one, beating rugs, making garden and picking strawberries are others. But every one of us, has a great accumulation of "things" waiting, and sometimes fairly crying to be done. Then welcome the rainy day, the "Snowbound" weekend, the off month—and get at 'em!

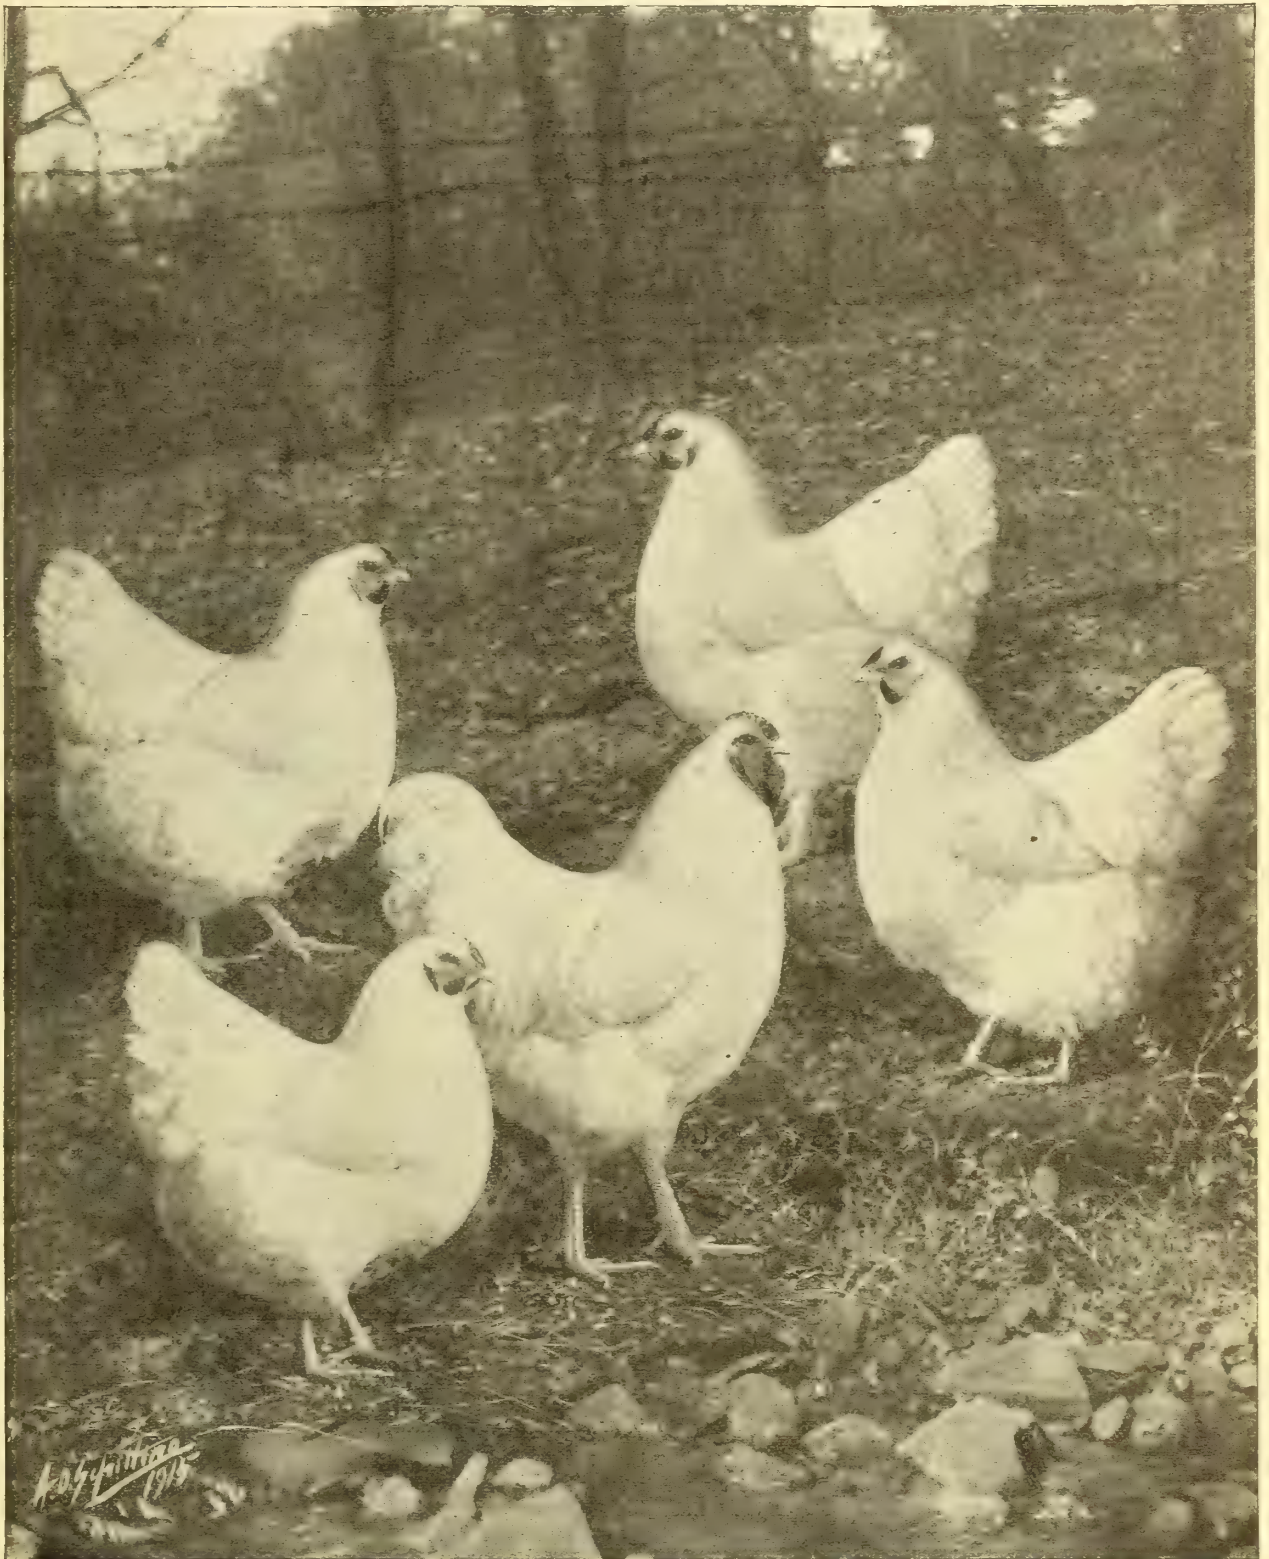

"The Little Red School House" is again prominently before the public, lauded by all from ex-presidents down. There is a tender spot in every heart for the little old building, sunning by the road side. We walked three miles twice daily for a number of years to one of these little red schools, named in honor of President Munroe. We could today traverse blindfolded every step of the original play ground surrounding this school, and point out where each tree, hill side, and "base" of the ball diamond, were in those days. We know each crack in the floor, where every desk stood, how the cobwebs looked suspended from the unreasonably high ceiling, where the water pail stood in its dust-laden corner, how the teacher whipped the boys, where the first Spring flowers blossomed, where at noon we gathered chestnuts, where the maps were "in the closet," how the "Globe" looked on the top shelf. But we cannot remember one lesson from books which we were supposed to have learned while a pupil at this school. We have no recollection of anything ever told us by the teacher, not so much as a story or happening. Oh yes, we remember the teacher very well, sitting by his desk, hearing recitations, or walking aimless-

SECOND PRIZE PEN OF WHITE WYANDOTTES AT
GREATER BUFFALO SHOW BRED AND OWNED BY C S WETMORE, LACKAWANNA, N. Y.

Consequently the Best

At the World's Fair, San Francisco, Nov., 1915

where the country's best birds were gathered for competition, we entered eleven birds and nine were in the ribbons. This wonderful winning was made with our Red Chief Strain of

Single Comb

Rhode Island Reds

You, friend reader, are the judge, wasn't it a wonderful win? Just consider, the leading Red breeders of the country were there; consider that our birds traveled clear across the entire country, yet made the remarkable win of

1st Cock 1st and 2nd Pullet
7th Hen 3rd Pen

Gold Medal for Champion Pullet, all classes competing. There were twenty-nine entries in the Cock class and Red Chief winner of First Cock was pronounced by all judges to be one of the grandest specimens ever shown. At the World's Leading Shows,

Madison Square Garden, 1916
and Boston, Mass., 1916

In the very strongest competition ever exhibited at these two leading shows exhibiting our

White Plym. Rocks

We won at the
GARDEN

2nd Cock
2nd Pullet
5th Cockerel
3rd Pen

We won at
BOSTON

2d, 4th Cock
5th Cockerel
3rd Pen

WHITE WYANDOTTES. We did not exhibit this variety at the Garden show. At Boston we captured 2nd Cockerel and 5th Pen.

You, no doubt, have heard about the "hot" Red class at these two shows. Our win at BOSTON was, 4th Cockerel and 6th Hen; at the GARDEN, 5th Pen. Now, friend, bear in mind that these winnings were made at the largest and best shows of the country, where competition was very keen and where a win means something.

IF YOU WANT STOCK

that will win, lay and pay, get our prices before you place your order. Our prices on eggs and baby chicks are the very lowest; quality considered. Don't even hesitate, write your wants.

MIRIMICHI POULTRY FARM

Breeders of Birds that Win, Lay and Pay

Foxboro, Mass.

ly about the room, gazing out the window. We used to wonder if he were as anxious to get out under the trees or sliding down the hill on a "bob" as we were. But there was a wide waste between the teacher and pupil and we never approached him on any matter other than those of unsolvable fractions or the maze of parts of speech. Thru those days "in the little red school," one unfulfilled longing clings to us yet. It was to have that "Globe" taken down out of the cobwebs where a child could get a real look at it! Most of us were "studying" geography in those days, but the "Globe" was never made a part of the lesson. How we longed to actually get our hands on it and send it whirling around as we had early been told the earth actually went. But we never did, and as the longing would not down, not a great while ago, we purchased one of these school room "Earths" and find it of never ending interest to the younger as well as the older members of the family.

In the days when we first attended the "little red school," the play ground extended over quite an area in three directions. On the fourth side, below a high banking, ran the public highway. Gradually the land owners adjoining the school property have encroached upon the public property, until when we visited it a year or so ago, the "little red school" has not enough grounds surrounding it on which to have a game of "tag." All the trees have been annexed by the neighboring property owners, and on the highway side, the banking has gradually washed away until it looks as tho the "little red school" may some day slide off the bare patch of earth upon which it stands.

No, we cannot enthuse over the methods employed in the "little red school" while a pupil there, but it is a real pleasure to recall those strange, never to be forgotten school days, and it would be difficult to reckon the number of valuable lessons learned outside the cut and dried schooling given us there. The "little red school houses" will be held in memory for these things for many years to come.

Any attempt to travel by means of public conveyance during the Winter months opens our eyes to the amount of abuse to which human beings will submit. An overheated car, packed to the limit with human freight—and not a breath to draw. At such times we have sometimes felt that being buried alive in a sealed coffin would not incite a sensation greatly different from that of being one of the mass in the ordinary packed and shut-up car. The officials in such cases are usually very obliging and immediately upon being asked, open a ventilator about five-eighths of an inch, unless, as frequently happens, the car has just been painted and the ventilator sticks. Providing he can get a crack open, what with heavy wraps and furs, we are then able to make the rest of the journey and just come out alive—but with a strong anti-travel feeling within us, until the sweet breath of the Spring and the good old days of Summer make it possible to have real ozone supplied en route at no extra charge per ticket.

butter. When very hot, put in the beef and sear on all sides, sprinkling it well meanwhile with sugar. When thoroughly browned, add two chopped onions, a few cloves, salt, pepper, parsley, a spoonful or so of canned tomato and two cups of water. A knuckle of veal will improve the flavor, but is not necessary. Simmer for two hours and add a small carrot cut in pieces. When the beef is tender and juicy remove to the oven after inserting bits of bread dressing as for roast turkey, and brown well. Serve with gravy made from the stock.

FILLING FOR LEMON PIE.

By E. C.

This filling is for use with two crusts. Into a double boiler, put one cup of sugar and one tablespoon, heaping, of corn starch. Mix with a little cold water and add one cup boiling water, three eggs, well beaten, and the juice and grated rind of one lemon. Stir until smooth and cook well. Remove from double boiler and use between rich crusts.

HATCH YOUR CHICKENS EARLY.

By F. D. ROGERS.

THE some old advice, which has been given time and time again, yet every season finds poultrymen each fall with all sorts of little late hatched runts which help to a great degree to reduce the profits of the owner.

Of course, a large percentage of these poultrymen are beginners and amateurs who really have had neither time nor opportunity to learn the folly of this practice, while on the other hand, many well-seasoned veterans are annually found in the same boat.

Of course, at times there are reasons, possibly, for so doing. Principally among them being poor fertility in the early spring or merely procrastination to which many of the human family are heir.

The fact that I want to emphasize and make clear is, that ninety-nine times out of a hundred, late hatched chickens are a detriment to their owners from every

standpoint. Commonsense is one of the best antidotes I know of to mix with almost any business, and it well applies in every sense of the word to poultrymen here, there and everywhere.

It is undisputable and most reasonable that the early spring is really the ideal time for the hatching of young chicks, the natural period of incubation for all bird life to mate and reproduce their kind, the season when flower life starts to bloom, the time when the buds burst forth in orchards everywhere, and when the life of all our forest trees yield to nature in form of new life and vigor. This is the right time and proper season to hatch little chicks. Better results will be observed by following this advice.

The early hatched youngsters, if properly brooded and cared for, will be well started toward maturity before the warm sultry weather saps their vitality, as it will do if hatched late in the season.

The cockerels that are not kept for breeding purposes may be marketed early in the year at a good price, the pullets becoming fully matured before cold

Regal Matings for 1916

For the season of 1916 I have mated up twenty beautiful exhibition matings. They are all headed by winning males at the New York State Fair, Boston and Hagerstown, and contain all my exhibition females. My birds are the up-to-date kind—the kind that are winning today. Hundreds of my customers were winners in the shows this winter. No strain has made such consistent winnings in the largest shows.

But this is not all—for years they have been bred for heavy egg production and stamina and it is conceded by all that no strain has a better record for usefulness. Nearly one thousand big, vigorous chicks in my brooder house, many of them all feathered out. The breeders are in curtain front houses and are the picture of health. Upon my show record and the utility qualities of my birds I base my claim that Regal White Wyandottes are the best in the world. Moreover, I send out eggs

from my best birds and you run an equal with myself of hatching the Champion bird of the year. The First Prize Cock at Madison Square Garden this winter was hatched from a setting of eggs I sold in 1914, but this is not the first time that New York winners have been hatched from Regal eggs. Last season I filled one of the largest, if not the largest, order for hatching eggs ever placed in this country. The following unsolicited testimonial tells what the results were like:

Dear Sir:—We assume that unsolicited testimonials are of special value to you. When we determined to establish a line of Wyandottes we made very careful investigation of the different lines of White Wyandottes in this country and decided that yours was the best for our purpose in all respects. The products of the 15,000 or more eggs we purchased from you has justified our opinion. The stock is very rugged and healthy—shows excellent vitality, has matured rapidly and seems to run unusually true to type. We are very well satisfied with the stock and thank you for your kind attention to the order.

Yours very truly,

Skowhegan, Me., July 8th, 1915.

Exhibition Matings

Pens 1 to 20 (as they run), \$5 per 15; \$9 per 30; \$12 per 45; \$24 per 100. Pens 5 to 12 are special matings. Eggs from special matings, \$10 per 15; \$18 per 30; \$25 per 45; \$50 per 100.

500 Cocks, Hens, Cockerels and Pullets For Sale

SPECIAL—50 big, vigorous, stay-white Dorcas cockerels, \$10, \$15, \$20 and \$25 each. Dorcas pullets, \$3, \$4 and \$5 each. Utility cockerels, \$3 and \$5 each.

FREE—20-page illustrated catalog and mating list. It gives full description of my matings for 1916. Send one dime for the "Regal White Wyandotte Book." The information it contains will be worth dollars to you.

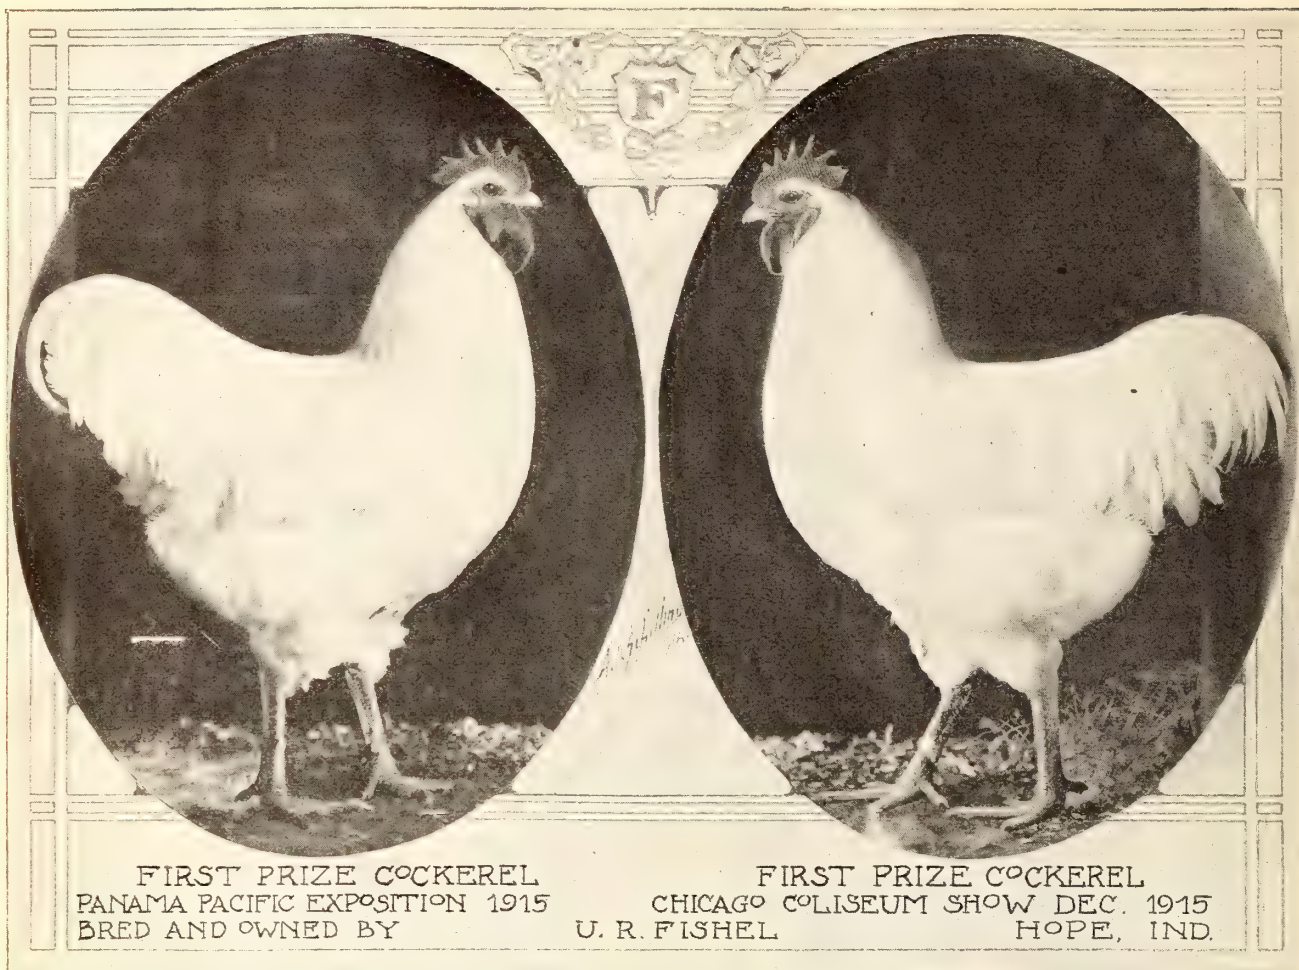

Record Laying Pens (Dorcas Line)

Pens 21 to 30 are headed by males bred from females with high records. Some of these males also have exhibition records. The females in the ten pens are composed of yearlings with trap-nest records from 180 to 224, and pullets of the same breeding. From these pens, eggs are \$5 per 15; \$15 per 50; \$27 per 100; \$50 per 200. Utility matings of vigorous surplus stock, \$5 per 50; \$9 per 100; \$17 per 200; \$25 per 300; \$75 per 1000.

JOHN S. MARTIN

Box 51

PORT DOVER, CANADA

The above photos are of the two White Plymouth Rock cockerels that won first prize at the Panama-Pacific Exposition and Chicago Coliseum shows in 1915. Mr. Fishel has won first on cockerel at every show where he has exhibited for the past two years.

weather prevails in the fall. My suggestion is, hatch the heavy varieties in March, and those belonging to the Mediterranean class not later than April or early May; and if I had to choose between February and March hatched Leghorns to those in June and July, I would prefer the ones hatched early in the season, even tho they start to lay in August and go thru a slight moult, the eggs laid at that time may be marketed at a good price, and these particular females will make excellent breeders; nearly as good as yearling or two-year-old hens.

Late hatched chickens are a nuisance from every standpoint, running and trying to grow, in most cases with older

birds, they are run over and become half starved; the fall season finding the breeder with a lot of stunted weaklings that never properly mature or prove of any value to him. Furthermore, it is a great advantage to hatch as many as possible at one time, reducing the labor from every standpoint.

If your breeding pens contain enough females, it would pay you to increase your incubating facilities and hatch as many as possible at one time, as they will grow and do much better.

It is preferable to keep as far as possible all chicks of one age in a flock. Then, as before stated, the young cockerels may go to market and be out of

the way at one time, instead of making several jobs of this part of the season's work.

Many articles appear, advising late hatched chickens that may look good on paper, but let me again emphasize and make clear that from many years of personal experience and observation, that it is a mistake from every angle, and I believe one of the principal reasons for losses and discouragement that poultrymen contend with year after year.

Reason it out for yourselves and take the advise we offer and you will become pleased and benefited, indeed, and best of all, find a better balance in the ledger at the end of the season's work.

IN THE INTEREST OF POULTRY CULTURE.

A Problem to Be Met, Faced and Solved with Truth and Fair Dealing to All Concerned.

By GEORGE A. HILL, Washington, D. C.

THE problem of poultry culture in this country is involved in two conditions: 1. Poultry bred exclusively for exhibition, to a Standard of Perfection. 2. Poultry bred to a Standard of uniformity and maximum value in egg yield and meat production, with little regard for minor exhibition points.

It is extremely unfortunate that this is so, as it is opposed to the best interests of the "industry," and we do not find such conditions in the production of other flesh food products as beef, sheep and hogs.

The question arises is the unit from which poultry meat and eggs are produced, to be perfected and developed for the purpose of following the demands outlined in the Standard of Perfection, that the unit shall weigh so many pounds in the variety, that its feathers shall be of a certain shade of color in the variety, that it shall carry its tail at a designated angle, that the ear-lobes, comb and wattles shall agree with a drawing made by an artist, that the shape of the bird shall copy this drawing, or in a single line is this unit to be something for the fancy to build up to a work of art and then assume that it will produce profitable meat and eggs?

On the other hand, is this unit to be developed so as to secure best quality of meat and maximum quantity of eggs, with the unimportant fancy requirements cut out? In the answer to these questions is involved over \$400,000,000 in annual value for the producer to produce and for the consumer to buy.

The first condition is what most fanciers appear to be longing for. The second is what the practical working poultryman, who wants results and a living from poultry, is striving to obtain.

Several years ago the American Poultry Association had placed before it, as an organization that from its very name should foster the poultry industry upon broad lines, the issuance of what was to be called a "Utility or Market Poultry and Egg Standard." The pressure for its publication was strong, so much so it could not be held back, altho there was opposition from the fancy. A committee was appointed from the membership of that association, and that only, to prepare the text of such a publication. That committee had meetings and meetings, and it may be still holding them for all that is known by those who are vitally interested in such a publication. But this much is known, the committee has never submitted manuscript of the Market Standard to be published by the A. P. A. In the opinion of many it was never intended that such a book should be published. However, the handwriting is on the wall, and if Association members do not see the significance now, they will in a few years when the farmer boys begin to make themselves heard and felt.

Take the statement that "every successful utility poultryman knows that his breeders must at least approach Standard requirements to maintain profitable production year after year." He

SHEPPARD'S FAMOUS ANCONAS

Are the standard by which all Anconas are judged. They speak for themselves. At the leading show of the world, Madison Square Garden, New York City, Sheppard's Famous Anconas have won three times as many first and second prizes as all other Ancona breeders together, during the past nine consecutive years, which proves beyond a doubt that they are

The World's Best

At the 1916 Madison Square Garden Show, we won eight First prizes, seven Seconds, six Thirds, six Fourths, five Fifths. Now is the time to send your order for some good hatching eggs, or some breeders and get ready to win next year. Prices reasonable.

Champion Layers

Sheppard's Famous Anconas are greater winter layers and have a wonderful record of **256 average** for a flock.

Your order will have my personal attention—write at once—Catalog on request. Stock, Chicks or Eggs for sale.

H. Cecil Sheppard

President International Ancona Club

Box M-2, BEREA, OHIO

knows no such thing. What is there in the Standard that indicates the breeding bird, even to produce exhibition specimens? It is solely a somewhat imperfect description of ideal exhibition specimens, with a summary of defects and disqualifications considered only in show competition, and not then observed by all judges. There is nothing in the book that indicates that it is a guide to better meat and eggs, or that the descriptions were designed to promote improvement in meat or egg production.

Some fanciers never speak of utility poultry except with scorn and up to the inauguration of laying competitions, *that had behind them a permanent organization*, they did not care whether their pullets laid two dozen eggs a year or not, so long as they could sell a cockerel or pullet whose sire had won a blue ribbon at a show.

Laying competitions have proved that the weight or color of individual birds does not indicate the best layer and these contests are not utility shows but are pure bred poultry tests, and the hen or pullet that cannot display her worth in that test is either fancy or mongrel. How many fanciers, who claim that Standard of Perfection birds lay better than those not in the exhibition class, have ever entered their stock in a laying contest or proved the laying qualities by authentic test?

It does not help any to cast slurs on these competitions. Such action will only react and hit the one who makes the charge that the contest is not above suspicion. Advertisements of fowls or pullets as prolific layers, not backed by sufficient proof, are misleading and calculated to deceive the buyer. Laws will soon regulate such advertising. Missouri has already started the ball rolling.

The American Poultry Association was organized in 1873, but the early Standards—except for a book with line drawings that brought forth a howl of protest—were not illustrated. The first really illustrated edition was published in 1905-1906, or thirty-two years after organization. Compare the illustrations in the editions of 1905, 1906, 1910, 1912 and 1915. The illustrations of the same variety are not the same. There have been changes made in them. Is there anything in the printed text that says the changes were found necessary, because the later pictured and described poultry were shown to be better in quality of meat or laid a large number of eggs? You won't find any such statement.

But, one the other hand, if you study the history of the A. P. A. you will learn that the illustrations, as proofs, were passed around to members of the association, and that those men decided simply upon *opinion* what should be shape, color, weight and so on, of the poultry of each variety. Would an association of milch cattle breeders use similar *opinion* as a basis on which to build a standard of milk yield and butter production? Or would they insist on records of actual performance?

Before we pay much attention to this cry for "better poultry and more of it" there should be a house cleaning in the affairs of the sponsor for our poultry Standard of Perfection. Get started *right* and it will then be possible to increase the membership of the Association to what it should be, and would be if values were rightfully judged.

There is unimpeachable evidence to

show that the Standard of Perfection is not a guide book to breeding exhibition poultry, it does not show how to breed, but merely describes ideals—a collection of "recognized" ideals, based on *fashion* and *opinion*—nowhere does it show where, or how, to obtain better meat values or better egg production, or large sized uniform eggs; nor is it anything but a compilation of rules and descriptions, which a judge should observe in the show room when judging exhibition poultry in competition for prizes—a purely fancy affair.

There lies the stumbling block between practical breeders of pure-bred poultry for useful purposes—furnishing an important part of the food supply of the nation—and the fanciers who breed for fancy only, or to sell fancy stock to others. There ought to be brains enough in this great nation to produce a book on pure-bred poultry breeding, that would be national in character, would cover the subject of producing better meat and greater egg yield, be based on actual facts and not simply exploiting the selfish interests of a little coterie of fancy breeders.

Of all the foolish statements ever made, the one continually harped upon, that if it were not for the Standard of Perfection pure-bred poultry would go to mongrelism, is about the limit. The 300-egg bird of 1914 was one that would have as much chance of securing an award, when judged by the Standard, as would a turkey in a Leghorn class. How should one judge the Leghorn that made a record of 314 eggs for the year ending in October, 1915? Is the egg record the acid test? Or shall we leave it to the judge, who has to be on the alert for bleached feathers, painted feathers, surgically treated combs, and the holes in shanks or feet where stubs have been pulled? How about the judge who resigned because, in order to apply the law of the Standard, he must throw out of competition birds that are "priceless as breeders?"

You can discuss this matter as you please, but you will find that 99% of buyers want utility values and want eggs from prolific layers, and some fanciers will tell us that they have them because they follow the Standard of Perfection in breeding. Is there any other flesh food product that, when passed upon by the judge, is disqualified *because qualified*—where there is such lamentable ignorance shown that stock "priceless as breeders" must by Standard be disqualified?

A fine score by a judge in the show room is no indication whatever of egg laying or meat producing values. Why mislead beginners by telling them that Standard points indicate laying or breeding values?

We farmer poultrymen can read and we can go direct to the heart of a condition too and size it up. There are many plants of many poultrymen in overalls; they may never show a bird—and I am one of them—but nevertheless they have layers that are giving splendid returns on the investment and these layers have received the stamp of approval in the tests of the laying contests. These men are selecting the prolific layers and placing them as breeders where results will be accomplished, not a gamble or a disappointment but real results in more eggs and better poultry meat to sell as food. "It is time that we pay as much attention to breeding for meat and eggs as for fine feathers."

ANOTHER GREAT RECORD

Three Generations of Sheppard's Famous Anconas

Looks Mighty Good, Doesn't It?

These are the birds that are world famed as winter layers. They have the wonderful record of 256 average for a flock. That is why my customers call them egg machines.

The pullets in the picture below were hatched from eggs laid by my birds in picture above, when parent birds were only four months, fifteen days old.

Here are the pullets that laid when four months, seven days old. Their eggs hatched these wonderful youngsters shown below, producing three generations in less than one year, making a record that stands alone.

Sheppard's Famous Anconas are bred to make good, both in the show room and as layers. They have made good for me. They will do the same for you. Stock, Eggs or Baby Chicks for sale. Send for our 86-page catalog which will be mailed upon request.

BIG PROFITS in Poultry

If You Know How. Get This FREE BOOK and Learn How

We have facts and figures on poultry culture that we want to put before every man and woman interested in raising chickens. Whether you are an old hand at the business or just beginning—whether you have been successful or not—whether you have an extensive poultry plant or are raising a few in a city back yard we have money making information for you. We want to show you how you can succeed and make a splendid income from poultry. We are the largest and best equipped exclusive poultry school in the world and we have in our course of 48 complete lessons made it possible for you to learn the poultry business in a scientific yet practical way.

2354 Eggs From a Pen of 10 Hens in a Year

In our lessons Director Quisenberry of the Mo. State Poultry Experiment Station gives you the methods he uses to secure such marvelous results. He tells you how he got 2354 eggs from a pen of 10 hens in one year—he tells you how to build practical and inexpensive poultry houses—how to feed for a big egg and meat production—how to treat poultry diseases—how to mate and breed—how to dress and market poultry. In other words you get all the knowledge necessary to make you a successful raiser of poultry. Nowhere else can you get such a course of instructions in poultry culture. No other school has behind it men of such prominence and experience in the poultry business. But send today for our Free Book "Dollars and Sense in the Poultry Business."

THE PROFITABLE S. C. WHITE LEGHORN.

A Contest Article. — How to Breed Them for Exhibition Beauty and Preserve Their Valuable Qualities.

By GLEN WALTZ, Canton, Ill.

THE Single Comb White Leghorn is, no doubt, the most popular and profitable fowl bred in the world today. Their ability to produce a large yield of eggs at a minimum cost places them in this class. Because the Leghorns are great foragers, they require less feed than any other good laying fowl. They make good broilers at eight weeks, and begin to lay when about five months of age, being unexcelled as egg producers. The results of the various egg-laying contests show the Single Comb White Leghorns always in the lead, year after year. The world's record of 314 eggs laid in 365 consecutive days is held by a Single Comb White Leghorn hen. As the profits in poultry raising lie mostly in the egg trade, it is no wonder that ninety per cent of the egg farms in the United States are stocked with Single Comb White Leghorns exclusively.

Whether you keep twenty chickens in

The electric incubator is so clean, simple, safe, and produces such uniformly good hatching results that it is rapidly coming into favor with poultry users where electricity is available. The Electric Specialty Co. of Salt Lake City, Utah, are manufacturers of the machine represented in the above picture.

the back yard, or a thousand on a poultry farm, the Single Comb White Leghorns will answer your every need. It may cost a little more to start with Standard-bred Leghorns than it does to start with "just chickens", but the results in the end will more than make up for the difference. Besides getting far greater pleasure and satisfaction in caring for your flock, you will be sure of having hens and pullets that will give a good account of themselves in the nest. If care is used in mating the breeding pens, you should produce some exhibition cockerels and pullets that will win the blue, and they always command a fancy price. This will help to keep the balance on the right side of the ledger.

The Leghorn has long been one of the most popular exhibition fowls—they can please even the most particular fancier. What is more beautiful than the Single Comb White Leghorn males and females that are being exhibited in our national shows today? The desire to produce these beautiful exhibition specimens, as near the Standard of Perfection as possible, results in a very careful study of the individual males and females that go to make up the breeding pen, and much time is generally spent in selecting the proper birds that, when mated together,

will produce the best results. When mating Leghorns to produce exhibition birds, never lose sight of their great utilitarian qualities. Never use an undeveloped bird in the breeding pen. Use the best layers you have for your breeders. The main points to be considered in selecting the birds for the breeding pen, and their order of importance, are: vigor and type, blood lines, shape, and color. It is very important that the birds are vigorous and well developed. The better the birds in this respect, the better will be the vitality of the young chicks. Blood lines play an important part in the preserving of certain desirable qualities in the flock, whether in fine exhibition points, or certain egg-producing qualities. Scientific line breeding, not inbreeding, has proved a success on many of the largest S. C. White Leghorn farms throughout the country. The shape and color of the breeders should conform as near to the Standard as possible.

To produce exhibition cockerels, use a male that stands well up on a good pair of yellow shanks, set well apart. He should have a very prominent breast; small, smooth comb with five deep serrations; a deep red eye; almond shaped, smooth white ear lobes; long concave back; and low sweeping tail, well furnished with coverts and saddle feathers. He must be chalk white in all sections. With such a male, use females with a straight five-point comb, set firmly on the head; red eye; well rounded breast, yellow legs; long back, with good cushion; tail well spread, and carried slightly lower than that of the male; chalk white plumage thruout.

To produce exhibition pullets, select a male similar to male in cockerel mating, with very thin, fine textured comb; well spread tail, but no excess of saddle feathers. Use females similar to those in the cockerel mating, with fine evenly serrated comb; low, well spread tail, with no cushion.

Such matings should produce a large per cent of exhibition birds. When possible use males out of heavy laying dams, and females of known laying ability, and in this way increase the egg productiveness of your flock. Some people think that an exhibition S. C. White Leghorn is not a heavy layer, and that a heavy layer is not an exhibition bird. I have always found this to be quite the contrary. The very birds that win the blue in the show room, go right into the breeding pen, and are the heaviest layers. The leading Leghorn breeders thruout the country will substantiate this statement. We hear of heavy layers that have high and pinched tails, but this, I believe, is a result of some previous mating, and not the result of heavy egg production. With careful mating these birds can be bred so that their offspring will carry their tails as the Standard calls for, and still retain their high egg-producing qualities.

If the White Leghorns are properly housed in an open-front type house, and are properly fed and cared for, they will be as docile as any other variety of chickens. If plenty of fresh air is supplied the fowls, there will be no frosted combs and the females will give the maximum yield of eggs, as fresh air is the best poultry tonic known.

To the beginner: If you want the one best breed of poultry, try the Single Comb White Leghorns, the most popular and profitable exhibition and utility fowl on earth.

North Avenue

Waukegan, Ill.

RECOGNIZED WORTH OF THE S. C. W. LEGHORN.

By JAMES KEPPIE, Petaluma, Cal. . .

WE HAVE heard a great deal, and read much praise in the past on the S. C. White Leghorn, but the more I hear and the more I read about them, always seems to leave a feeling of more and more.

Anyone interested in poultry of the active hustling sort cannot help but admire the Leghorn. From the fancier's point of view, the S. C. White Leghorn is one of the neatest, classiest and proudest little birds to be seen anywhere. The beautiful lines of the male bird attracts the attention of lovers of bird beauty and the exhibition female shows to perfection the clean cut lines and beautiful curves characteristic of the breed.

When talking with the Leghorn fancier and breeder he never forgets to tell you of their wonderful laying qualities. He cannot help it, for this characteristic stands out so prominently in the S. C. White Leghorn, where we have a bird that is decidedly useful as well as ornamental.

Petaluma, California, (The Egg City), is the home of over two million S. C. White Leghorns and here we find the little business hen at her favorite job of shelling out thousands of white shelled eggs every day. She is never happy unless she is laying. Here in Petaluma she has actually paid for thousands of comfortable homes, and she has made Petaluma and surrounding country exactly what it is today, a thriving up-to-date little valley of over 30,000 families. Do you think for one moment that you could induce those prosperous poultrymen to keep any other breed than the S. C. White Leghorns? Well, I guess not, for many have tried other breeds—but not for long!

We can now find large commercial egg farms in this country from coast to coast, and from the Great Lakes to the Gulf, stocked with these active little layers.

The White Leghorn baby chick is a decidedly hardy chick. He is a fast grower and as a broiler he certainly "takes home the bacon." With proper care and feeding, the Leghorn cockerel in ten weeks will carry from one to one and one-half pounds of the most delicious, sweet, juicy meat you ever ate. The pullets with proper housing will start to lay at from four and one-half to six months of age, and as a rule will lay heavily thruout their pullet year.

It has been proved that a Leghorn does well and thrives under all kinds of housing conditions and environments. I have seen her doing wonderfully well in the smallest houses, and remarkably well when kept confined in a long laying house in flocks of 900 to 1000. When out on range she is truly in her glory under any and all climatic conditions, for everywhere you will find the little White Leghorn hen always in the first line of trenches shelling out the big white shelled bullets that shoot gold into the pockets of their owners.

Silver Wyandottes

"There is Money in Silvers"

I WILL SELL EGGS \$3.00 for 15
\$5.00 for 30

I have a splendid lot of big, open faced birds—splendid layers. Also can spare a few high class show birds. Correspondence invited.

HENRY STEINMESCH

ST. LOUIS, MO.

UNCERTAIN FACTORS IN BREEDING.

Interesting Opinions Expressed by Edward Brown and Thos. W. Sturges in The Feathered World, England.

At the last Dairy Show a pen of fowls was exhibited described as Mendel fowls. sometimes the question is asked, "What's in a name?" In spite of statements frequently made indicating that the name is a negligible quantity, it may be pointed out that a good name or title helps greatly from an advertising or publicity point of view. Therefore, should this prove to be a new breed, one with permanently distinctive qualities commending it to poultry breeders and keepers, the name referred to appears to be a wise choice, for the term "Mendel" is one to conjure with. The primary need, however, is that behind the designation there shall be profitable qualities, which can be maintained and perpetuated in successive generations, without which no combination can hope to win its way. New breeds are required from time to time, and efforts to extend the range are desirable. But these must be distinctive,

R. C. Rhode Island Red. Quincy Poultry Farm, 2700 Maine St., Quincy, Ill. They also breed S. C. Reds, S. C. W. and Brown Leghorns, Black and White Orpingtons, White Wyandottes and Barred Rocks, all on separate farms.—F. D. R.

and have that degree of virility or constitutional vigor that are liable to be lost after many years of breeding on closer lines of affinity.

The fowls referred to are specially interesting for two main reasons, first, that the originator claims to have made a close study of scientific breeding, and is seeking to demonstrate the views he holds in this very practical manner, and, second, that he has frankly stated the combination of qualities he is seeking to secure. The latter concern us now, for, should the effort be successful, it will, so far as I am aware, be the first success in this direction. The evolution of new breeds has generally been more or less haphazard.

Apart from color of plumage—white—and class of comb—single—the points aimed at are: (1) White flesh and legs, so as to get a good if not large table bird; (2) tinted-shelled eggs; and (3) that it shall be a non-sitter. The first and second of these are not incompatible. In fact, they are both to be found in several breeds and varieties, of which the Orpington and the Malines are examples among more recent creations. The first and third are to be met with to a lesser

Used Twelve Candees - Best Results Ever

Houses in which Candee Colony Brooders are operating on the big Hudson River Farms, Inc., Esopus, New York.

"It gives me pleasure to say that we have about 10,000 pullets, the best we have ever had. Everyone is a picture of health and vitality. All these pullets were hatched and brooded with the Candee 10,800-egg Incubator and Brooders. The 12 Candee Colony Brooders installed this season have given us the best of satisfaction.
S. Yadlooker, Supt., Hudson River Farms, Esopus, N. Y., June 17, 1915.

The Brooder for Beginner as well as for Expert

The fact that Candee equipment is selected by experts like Mr. Yadlooker, who carefully investigate before buying, is one of the best recommendations that can be made for the Candee Colony Brooder. Hundreds of beginners also, with flocks as small as one hundred and fifty chicks, have selected the Candee because it insures better results. It is absolutely safe and will raise more chicks. It is simple to operate and requires little attention.

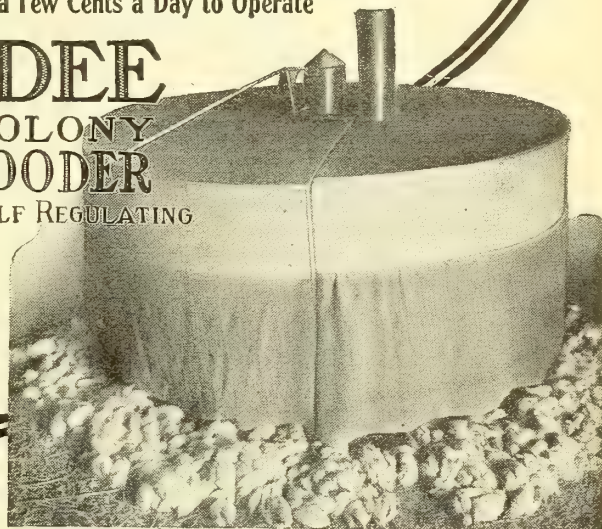

Many beginners in poultry get discouraged because they lose so many chicks with improper equipment. You can start with the Candee Colony Brooder, operate it in any house, brood as few or as many chicks as you like up to 500, and it will never wear out but encourage you each season to raise more and more chicks with ever-increasing profits.

extent. Still, there does not seem to be any actual antagonism in nature against them, altho in the greater number table qualities and expression of the maternal instinct are usually found in association. That may, however, be incidental, not functional. Hitherto the second and third in combination has not, so far as I am aware, ever been seen as definite qualities combined in any pure breed.

A WARNING NOTE.

In this connection it is necessary to keep in view the fact that crosses prove little or nothing. I have seen and bred those which laid deeply tinted eggs, and yet did not become broody, so far as the first cross was concerned. *Later generations upset the entire scheme.* Until and unless any quality or combination of qualities can be expressed and maintained in a breed, capable of reproducing in successive generations parental type, coloration of plumage, etc., and the distinctive qualities of the original stock, no real or useful result will be achieved. And it is there the problem lies, one that cannot be solved for at least five, perhaps more years.

Two or three years ago announcements were made that in the biological department of Cambridge University the combination of tinted shells with non-broodiness was being attempted. A measure of coloration of shell was secured, and absence of desire to sit, in the first cross. How much more has been arrived at is not known, but from the absence of any reports I can only assume the results do not justify publication.

The eggs I saw at Cambridge were very pale in tint, and those laid by the Mendel hens are weak indeed in that respect. These are light buff, very far from the brown egg which the market asks for, and without which aim No. 2 will not be realized. In fact, I am inclined to the opinion that a really white-shelled egg is preferred by consumers to one of these washed-out so-called colored eggs that, in the respect named, are neither white nor brown. The very difficulty of achievement, however, will be the originator's greater glory if he should achieve his object. Such would be a great triumph for Mendelism, the value of which in practical poultry-breeding has yet to be demonstrated. In this is assumed that there shall be vigor of constitution and prolificacy as egg producers. Possibly, the originator is adding to his difficulties by seeking to combine a high development of fecundity and of meat qualities. That is a question which need not now be discussed.

EGG-SHELL COLORATION.

Two facts appear to stand out, namely, that in many instances, unless specially bred for, as the number of eggs is increased in any breed or individual there is a marked loss of color in the shells, that is, if the breed is one laying brown eggs. At the same time many of the best table breeds lay pure white eggs and others brown, tho there is no reason why they should do one or the other. On the other hand, all those races included among non-sitters without exception produce white-shelled eggs. If one has nothing to do with the other the coincidence is indeed remarkable. It is all, indeed, a jig-saw puzzle, seemingly impossible to fit together, tho, if we only could see farther, there must be an explanation.

For years I have been trying to obtain light on this question of egg-shell coloration, so far as domestic poultry

PIGEONS PAY

Better Than Chickens
Young pigeons (squabs) bring 40 to 50c each when 3 to 4 weeks old. Big demand in city markets. Each pair of pigeons easily clear \$4 per year. Always penned up. Very little space and money needed to start. Free Book explains all. MASTIC SQUAB CO., Dept. 56, ADEL, IOWA.

are concerned, but in vain. Naturalists tell us that in wild birds protection whilst eggs are in the nest is the determining factor, so that these may not be easily discerned by marauders. Such is a beautiful provision of Mother Nature to secure perpetuation of her winged creatures. That does not apply to domesticated poultry. Consultation with scientific investigators and naturalists, both individually and in their writings, has thrown no ray of light on the subject. At every point we are thrown back. The following indicate some of the difficulties.

Color of the plumage has nothing to do with the color of shell. The White Orpington and the White Wyandotte lay tinted eggs; the White Leghorn and the White Bresse lay eggs without any tint, and so thru all the range of exterior coloration.

Color of flesh, skin, and legs alike do not correlate with color of egg-shell. The Dorking is all white in these respects and lays white eggs; the Orpington is the same and lays tinted eggs; the Plymouth Rock and Indian Game have deep yellow flesh, skin, and legs, and lay brown eggs; Leghorns have the same and lay white-shelled eggs; black Orpingtons and Minorcas have gray flesh and dark legs, but one lays tinted and the other white-shelled eggs.

All fowls originated in Asia. Possibly all laid brown-shelled eggs. Whether that is so cannot be stated. I have often longed for the opportunity of spending a couple of years in India and China, especially the latter, for the purpose of delving into the mines of knowledge of breeding unknown to Western nations, but the opportunity has never presented itself. Perhaps that may be the fortune of someone else. If so, it would be a great gain. The fact is that within the last hundred years the ancestors of all our breeds which lay brown-shelled eggs have come to us from the Far East, either in the breeds we have today or the use of these in newer combinations. That is true of American races as well as our own.

White-shelled eggs come from those birds which have been bred in Europe for hundreds of years, regardless of whether these are characterized by egg or flesh qualities. What the cause is has yet to be discovered. So far as we know climate and soil are not responsible, unless the process of bleaching the shells is very slow, requiring many generations to effect a great change.

The only potent fact that remains is that as yet no non-sitter producer brown-shelled eggs. Hence the difficulty, as the interest, embodied in the Mendel fowls so far as the object of the originator is concerned. Up to the present it has been confusion worse confounded. Whether new light will be thrown upon the question time alone can prove.

EDWARD BROWN.

COMMENT BY MR. STURGES.

There are many secrets yet to be solved, and the causes of broodiness and its relation to the color of the shell is one of them.

Every fancier knows that the so-called non-sitting breeds often go broody, such as Leghorns, Anconas, Campines and Minorcas.

There are two things which appear to me to account for this, or perhaps three:

(a) The fact that most of the non-sitting breeds, as we know them, are not "pure," but have been crossed with other

CHAS. L. STILES

232 N. Third St., COLUMBUS, OHIO

breeds, tho this may have been in a few generations back, and so there is a "reversion" to the earlier state.

(b) All of us know that this broodiness is more frequent in a hot summer than in a milder one, which points to heat as a direct cause.

(c) I at least have noticed that birds which are well fed and inclined to put on fat are more commonly broody, and also if they have an excess of fattening foods. This may be almost classed with the second cause given above, since it is internal heat.

Mr. Brown must be aware of the fact that not all layers of brown or tinted eggs are broody. I have had Orping-

eggs, hardly to be distinguished from the pure Campine. One at least lays a dark brown egg, and when the ten pullets are all in full lay I shall be able to note the percentage of white, tinted and brown, and to note the broody or non-broody qualities of each. It is also interesting to note that of the ten pullets five have rose combs of various shapes, and five single combs, an indication, by the way, of the want of homogeneity in the character of the Rose Comb.

It is curious nine out of ten cockerels all came with single combs.

Of the marvelous results in color I shall have something to say later on. I wish first to mate the progeny together

"Basket Prince," son of Betsy (record 260 eggs), made from unretouched photo. Undoubtedly one of the best bred-to-lay sires in the country. The very picture of health and vigor. Apple Grove Poultry Farm, Delavan, Wis.

tons, Rocks and Rhode Island Reds that have never come broody during the whole season, and the case is a very common one with the utility White Wyandotte.

It would be interesting if fanciers would record any difference in the shade of the tinted eggs laid by broody and non-broody layers. It has usually been taken for granted that when a layer of brown eggs is crossed with a layer of white eggs the brown is dominant over the white, and that none of the crossed progeny will lay a pure white egg. My own experience during the past season does not bear this out.

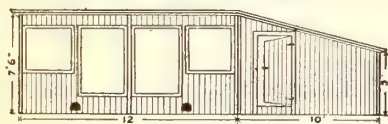

I mated a Silver Campine cock with two Rose Combed Rhode Island Red hens which laid very brown eggs. At least half of the progeny lay pure white

and see what the first generation will produce. I do not think one breeder in fifty can guess the color and markings of the progeny, but it is very beautiful. Nearly all the pullets take after the Rhode Island hens in shape—another proof of an established axiom of the Fancy.

It would certainly be a conquest if a real non-sitting breed could be made to lay a good dark brown egg. I am very doubtful of its accomplishment, but I do believe a breed can be made to lay a light-tinted egg and be non-broody. In fact, the White Wyandotte is very near it now, and in many cases the breed is hardly more of a broody character than the Leghorn or the Minorca.

MEYERSDALE, PA.

ECHOES OF THE SAN FRANCISCO CONVENTION.

New Light on the Proceedings of the American Poultry Association and the Harrison-Penick Case. Statements by Robert G. Bailey of Idaho and J. D. Veach of Montana.

Reported by PRINCE T. WOODS, M. D.

IT IS apparent, from the published and verbal reports that have come to us concerning the fortieth annual convention of the American Poultry Association at San Francisco last November, that a great deal of the association's time and money was wasted in an attempt to pacify one angry little man, intent on compelling the association to do his bidding in his personal interest. It is not the first time, nor the second, that one man has monopolized the time of the association for personal interests and wearied the members with his ranting. The American Poultry Association, if it intends to go in for this thing annually at conventions, might perhaps save time by having these long harangues, which with very few exceptions are much the same, embodied in phonograph records so that the elect and elected could listen to them to their heart's content *outside* of convention hours. We have no doubt that such imperishable records could be obtained gratis. It is barely possible that the American Poultry Association might be put to better use than exploiting and being exploited by Grant M. Curtis. "I thank you!"

Of course when the Official Proceedings are published we will, as usual, get only an edited and expurgated report of the doings at the convention. However, Editor Curtis, who promises still more to come, has already contributed some amazing information concerning the convention and the doings to the Executive Board at San Francisco in the December

and January issues of his publications. By his own words he makes it plain that he attempted to assume a dictatorship over the association and that he meddled to a very considerable extent in work of the Executive Board, where he had no right whatever, and that he blocked and obstructed the work of the convention for entirely personal and selfish purposes.

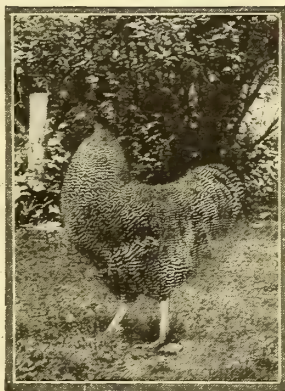

Unretouched photo of S. C. White Leghorn hen of the egg-type as produced by the Ever-fresh Egg Farm, Ionia, Mich.

He does not even make it necessary for his readers to "read between the lines," but makes admissions in cold print that we would expect any decent man to be ashamed of. It is not a pretty or edifying exposition. It is decidedly sordid and disgusting.

Mr. Curtis' story of his sleuthing, his gumshoe methods, his intrigue and confidences with a hotel stenographer, whom

he encouraged—if we are to believe him—to tell about work done for other employers, his insisting upon the Executive Board retrying and again retrying the Harrison-Penick case because the verdict did not suit him personally,—altho both principals in the case had agreed to consider the first finding final and abide by it,—and his erratic and verbose retorial and recriminations to the extent of many pages in his December and January publications, all form a tiresome and unworthy exhibit that make us wonder what can be the state of mind of a man who will so conduct himself.

If any hotel stenographer did as Mr. Curtis, on pages 1250 and 1251 *January Reliable Poultry Journal*, claims "one of the stenographers" did, thus violating and betraying the confidence of Messrs. Harrison and Veach, whom Curtis assumes previously employed her; then certainly she was not a woman whose statements could be believed and she certainly ought to lose her job. No public stenographer worthy of confidence would deliberately volunteer information concerning the work of any employer. Altho Mr. Curtis admits that the Executive Board accepted certain typewritten findings in the Harrison-Penick case and allowed them to be adopted by the convention, which should be sufficient evidence that the findings were satisfactory to the Board and authentic, he is, at great length, endeavoring to show that the "Volunteer Report," as he terms it, was of questionable character and in no way official. The great trouble with this report of Mr. Curtis', that he so much desires to have his readers believe, is that he piles it on too thick. We can well believe, from his own statements, that there was much talk and tears by him about resigning from the association if he could not be permitted to have his own way in all things. It is a pity that some one did not take him at his word and let him resign, or at least give him

Two Announcements Extraordinary

NUMBER ONE—Everybody please send for my special plan for 1916 in regard to eggs for hatching from the world famous Aristocrats. This plan is a **surprise**—

ENTIRELY NEW

and will appeal to ALL breeders of Barred Rocks. It is probably the greatest offer made by any breeder at anytime. Therefore, **everybody write today, everybody.**

NUMBER TWO—Special reduction, one-third off on all prices of Aristocrat birds during the rest of this season—on males, females, pairs, trios and pens. For instance, birds listed at \$15.00 will now cost you \$10.00; \$30.00 trios and pens \$20.00; \$75.00 trios and pens \$50.00, and so on. And

You Are to Be the Judge

If the chickens you buy under this special offer number two are not worth at least **fifty per cent more** than the price you pay, you need not keep them.

Absolute Satisfaction Guaranteed or Full Purchase Price Refunded. The birds are ready for immediate breeding, and if you rush your order **when you read this** you will still be in time to raise a big flock of early birds. Please, **RUSH.**

ATSATT BROTHERS 27 Pearl Street MATTAPOISETT, MASS.

the opportunity. It might have put a different complexion on after events and have saved the association both time and money. Not that I believe that Mr. Curtis would resign, for, personally, I do not believe that a new twin-six motor could drag a resignation out of him. He needs the association in his business and he has had pretty much his own way with it for quite a long time. However, the presentation of the case in his publications savors of half-truths, of which Tennyson says:

"That a lie which is half a truth is ever the blackest of lies;
That a lie which is all a lie may be met and fought with outright—
But a lie which is part a truth is a harder matter to fight."

Or, perhaps, one might say in the words of the poet Dryden:

"Some truth there was, but dash'd and brew'd with lies,
To please the fools, and puzzle all the wise."

It is not my intention to reprint here the accumulation of alleged evidence in the Curtis publications. It would be a waste of space and, frankly, I do not believe that Mr. Curtis' statements are, as he claims, "true and impartial." I do not believe that any intelligent reader can waste thru that mass of words, in-

"Boston King," first prize and champion cockerel Boston, 1913; greatgrand sire of "Santerlizer." Bred and owned by W. W. Carpenter, East Providence, R. I.

nuendo, implied meanings, vague guesses, slurs and slams, and carry away even the slightest suggestion of a thought that Mr. Curtis aimed to be "fair", or that he had any other idea in view than to gain his point at any cost.

The details are in his papers for anyone interested to look up and read, and I do not intend to waste more space on them here. Interesting light is thrown on this matter by the statements published in *Western Poultry* by Robert G. Bailey of Idaho, and J. D. Veach of Montana, refuting the Curtis "evidence" and giving him the lie direct. Our readers should have, and will be interested in, these statements of Messrs. Bailey and Veach, which are quoted below:

Statement of Robert G. Bailey.

In the last (December, 1915) issue of the *Reliable Poultry Journal* its editor, Grant M. Curtis, tries to make it appear that J. D. Veach, the delegate to the American Poultry Association from Montana, and the editor of this magazine (R. G. Bailey) who was the delegate from Idaho, stood in with and worked for F. E. Harrison at his trial before the executive board at the A. P. A. convention

recently held in San Francisco. By innuendo he implicates myself and by direct attack charges Mr. Veach with some things that do not look very nice, to say the least. The proceedings of the executive committee were supposed to be secret and yet Mr. Curtis, in his article, shows a direct knowledge of what transpired when he was not present, in places where he thinks the knowledge will help his case, and in other instances shuts up like a clam, as when he says: "Then the report was adopted by the limited number of members present, by what vote R. P. J. does not know."

There are always two sides to a story, but in the garbled report of Mr. Curtis one thing stands out very clear—that Mr. Curtis has made an attempt to give his readers perverted facts, but has printed such extracts from the workings of the convention which he thinks will help him in the big suit soon to come to trial, in which he is accused of libel in handling this self-same case. In the first place, I want to say that I have followed the case as presented in R. P. J. ever since Mr. Curtis started in to flay Mr. Harrison for alleged crooked practices. When I went to the convention I was very much prejudiced against Mr. Harrison, as a result of what I had read, and, as a matter of fact, that prejudice still remains. Inasmuch as Mr. Curtis has reported what is purported to be the doings in the executive committee, but has either knowingly or otherwise stated them somewhat contrary to the facts, I am going to give a statement of such things as I think will interest my readers in the Harrison case, and when I am thru I believe they will agree with me that Mr. Curtis is not as frank with his readers as appears on the surface.

In the first place, the Harrison-Penick case came up first for trial before a committee composed of 21 members of the executive committee, and after listening to the evidence submitted the committee arrived at a verdict and then agreed among themselves not to divulge their findings until the report had been submitted to the convention. On Thursday morning this report was handed in, but before it was read Mr. Curtis asked that it be handed back for a rehearing, and that the committee be instructed to hear new evidence, etc. Naturally the committee resented this and the convention refused to entertain the motion. I, for one, and many others said the same thing to me, resented Mr. Curtis injecting himself into the matter before the verdict was read, for it showed there was a traitor among our number, or else Mr. Curtis had gotten his knowledge of the verdict in a gum-shoeing manner which looked good to none of us. The convention then adopted the report of the executive or the trial committee. Mr. Curtis, in the R. P. J., says the convention rejected his motion thru a "misunderstanding." The records will show it was rejected because the convention refused to make the matter a personal one and pull the chestnuts out of the fire for Mr. Curtis. The verdict as handed in by the trial committee was as follows:

"That the said F. E. Harrison should reimburse R. L. Penick in the sum of two hundred dollars (\$200) as a satisfactory settlement. Both parties to the case appearing in person before the board, agreeing to submit to the decision of the board as final."

Mr. Curtis presented a substitute motion, which, after a great deal of discussion, was carried, referring the case again to the executive committee. I opposed the motion on the ground that the trial had been a fair one, both parties had agreed to abide by the verdict of the executive board, the convention had affirmed the finding of the trial jury, neither of the parties to the trial was asking for a rehearing, and I didn't think any outsider had any right to butt in to get the convention to place itself in a position of reversing itself. But the convention had spoken and back we went to executive session. Before the trial was reopened the executive committee agreed among themselves to abide strictly by the convention's command, to allow the introduction of ALL matter that would in any way bear on the case. But for fear Mr. Curtis would again inject himself in the case as a "lawyer" to plead for Mr. Penick, and with his long-winded arguments prolong the case forever and a day, the committee also agreed to allow no arguments and no outsiders to appear in the case for either side, aside from those having direct testimony to give. After listening to both the plaintiff and the defendant give in such testimony and introduce such witnesses as they desired, the jury arrived at a second verdict in about ten seconds.

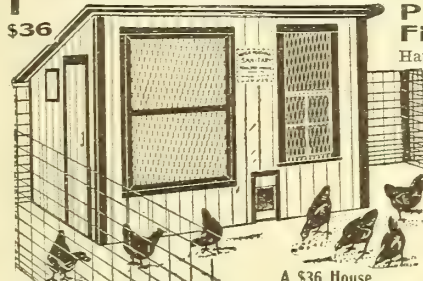

The following morning a second meeting of the executive committee was held, as it had been decided the night before that this would be necessary to approve the verdict after it had been presented in typewritten form. The verdict was read by the chairman and, after a few words were added which were suggested by the president-elect, the report was adopted and ordered returned to the convention. The number of persons who adopted this written report were exactly the same as those who had

DON'T KILL or sell your laying hens

Use the **Potter System** and pick out the layers from the loafers and diseased hens. Keep only healthy laying hens. The **Potter System** is a secret and the greatest discovery of the century in the poultry world on the subject of Egg Producing Hens. Used by over 50,000 satisfied poultry keepers, who are saving dollars every year. Our new 100-page **Potter System** book, "**Don't Kill the Laying Hen**," contains the secret and knowledge about laying and non-laying hens. It's a revelation to poultry keepers, and you will learn how you can use the **Potter System** on your flock, keep less hens, get more eggs and make more money using it. Write today, sending two red stamps to cover postage on our large catalog and circular telling all about **Potter Poultry Products** made for Particular Poultry People. If you are particular and want to make more money on your flock, you will write us today.

DON'T BUILD You can buy better, cheaper, more complete ready (factory) made hen-houses, roosting and nesting fixtures, coops, etc., from **Potter & Co.**, because they buy lumber in carloads, cut and fit all parts perfectly by automatic machinery and deliver the house, coop or fixture you need in convenient sections all ready to set up.

A \$36 House
No. 5, Style "D" Potter portable open front fresh air, scratch shed house, equipped with No. 17, Style "A" 5-ft. 3-perch complete henhouse outfit for 30 hens. Price of complete house, \$36.00. Painted 2 coats.

Send for Our Big Catalog

Contains 132 pages and over 150 illustrations showing **Potter** portable houses, coops, henhouse outfits, feed hoppers, brooders, hovers, feeds, etc.—in fact everything the poultry keeper needs to insure the greatest success. Catalog mailed for two red stamps to cover postage. Write for it today and save money.

POTTER & CO., 10 Forest Ave., Downers Grove, Illinois, U.S.A.

BUILT FOR THE COMFORT OF YOUR FOWLS

Our poultry houses are built—not machine made, that fall apart after a year's use. We use the best lumber obtainable, buy in car load lots, and for that reason we can sell you a house already built, considerably cheaper than you can make one.

FOWLS are LIKE HUMANS

If you spend the night in a poor bed you can't do as good work next day. If you have your fowls in a make-shift house, they cannot keep in condition for either laying or showing. House your birds properly and you will find the egg yield increasing and your birds looking much better. Proper housing means the "Perfection Way." Write for our catalog, it is free.

Champion BARRED Rocks

After my sweeping victories at Allentown, Hagerstown, Augusta, Ga., and Hanover, my birds made the following wins, Gettysburg, Pa., in a hot class: 1-2-4 Cock, 1-2-3-4 Hen, 1-2-3 Cockerel, 1-2-3 Pullet, 1-2 Pen, all specials and best bird in American class. At Philadelphia, Pa., the most coveted prize in the class, 1st Cockerel; also 2d Cock and 2d Pen. Book your egg orders now. A small lot of stock yet.

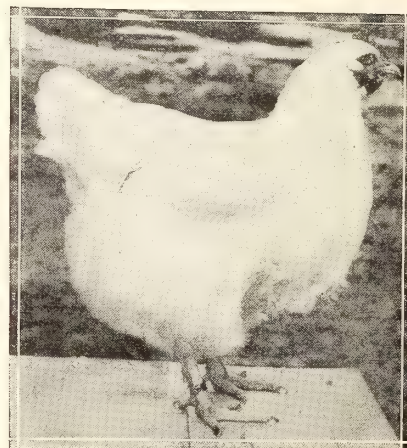

C. GUY MYERS - SIDDONSBURG, PA.

acquiesced the night before in the verbal report, and with probably two or three exceptions were identically the same. This second verdict was as follows:

"After a careful consideration of the evidence we exonerate the defendant in this action from the charge of fraud and dishonorable conduct and recommend that he return to the plaintiff the sum of two hundred dollars."

And right here Mr. Curtis gets in his fine work. He tries to make it appear that the verdict had been hatched in some mysterious manner in the night time, appeared on the chairman's desk the next morning and was adopted while the committee was asleep. As to just where the typewritten report came from, I do not know. I didn't give it a thought, unless to surmise that it had been handed to the chairman by the official stenographer. Mr. Curtis alleges it was dictated by Mr. Veach and by him laid on the chairman's desk. I do not know as to this, but I do know the typewritten verdict was read by the chairman and endorsed by the executive board.

This report was handed in to the convention after it assembled, and, after a great deal of discussion, was adopted. When the report was under discussion Mr. Curtis asked from whence came the report and its origin. In the R. P. J. he complains that none of the committee could or would enlighten him, and then he says: "It was evident there was a mystery of some kind afoot. Later on, the reasons

First prize White Orpington pullet at Racine, Wis., 1915. Owned by Novak Poultry Farm, R. R. 1, Racine, Wis.

for it became generally known." For my own part, and I believe this reflects the sentiment of a great many, I can tell Mr. Curtis what this "mystery" was. By his obstructionist methods of rule or ruin he had already delayed the adjourning of the convention one day beyond its allotted time, and I realized that the only way to choke him off was by a policy of silence. And even if I had possessed the knowledge he asked for I would have still kept my mouth shut. Probably the reason several members were seen to "look at one another," as expressed by Mr. Curtis, was with the thought in mind as to whether any of them would be fool enough to answer Mr. Curtis and so furnish him with ammunition which would start him off on one of his tire-some tirades.

After the convention adjourned for noon it became general talk that Mr. Curtis had torn his delegate badge off and had threatened if he could not have his way in framing the verdict of the executive committee he would resign from the American Poultry Association. Most of the delegates got tired of this kind of talk and threatened coercion, and when the convention convened for afternoon session were conspicuous by their absence. At this session, with only a handful of delegates present, or less than a quorum, E. B. Thompson moved for a reconsideration of the executive verdict and Mr. Veach opposed it, and so did I. Just what actuated Mr. Veach, it is up to him to say, but if Mr. Curtis will print the official report of what Mr. Veach said it will be somewhat illuminating to his readers and shed a great light on the things Mr. Curtis is now covering up. As to the charge of Mr. Curtis that in my remarks against the motion, "R. G. Bailey, Lewiston, Idaho, also favored the interests of Mr. Harrison before the convention and as a member of the executive board," I want to say that this is a deliberate lie. As I have before remarked, from reading the articles in R. P. J. from Mr. Curtis I formed a hearty dislike for Mr. Harrison and his alleged methods and this dislike held all thru the convention and prevails today. When

I opposed the motion it was for the reason that it looked to me like Mr. Curtis was making a fool of the convention; that for the convention to keep on reversing itself would make the A. P. A. appear in the minds of the general public as an erratic body without the brains or the will power to accomplish anything; that the matter had been twice accepted by the convention, and I thought the convention should have backbone enough to stand by its executive committee and not bow to the threats of any one man. And I voted against amending the measure. But Mr. Curtis' handful of friends prevailed and the matter was again for a third time referred to the executive committee.

The final session of the committee which settled the matter was held in the convention hall, the convention adjourning a short time for the purpose. With a very few exceptions the final session of the executive committee was composed of those who had voted for remanding the verdict, and I don't believe half of them had in reality been members of the original trial board. At this session it was decided to return to the convention the first and original verdict, which had been arrived at by the trial board and which had been unacceptable to Mr. Curtis. This was done, and the net results of Mr. Curtis' filibustering was that the convention was delayed two days in its work, a great many ill feelings were engendered, and the basic principle of co-operative work at the convention was shaken to its foundation.

One thing I want to say on behalf of the executive board and that is, that sentiment cut no figure in the rendering of the verdict. All they had to go on was the evidence, and no matter what their private opinion, they rendered a verdict in accordance with the evidence submitted.

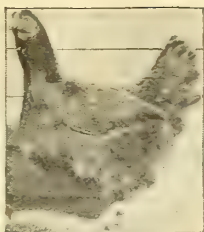

As for Mr. Harrison, I was introduced to him in the lobby of the Inside Inn and exchanged with him perhaps a dozen words in all. I met Mr. Penick after the first trial, when I believed the matter was settled, and had a long talk with him. For fraternal reasons, if for not other, I would have favored him against Mr. Harrison, and yet Mr. Curtis tries to make it appear that I was champion for Mr. Harrison—for or without a consideration he does not make his article appear.

When the final verdict of the executive committee was handed to the convention, Mr. Curtis says: "If Messrs. Harrison, Veach or Bailey voted against the adoption of this final action by the executive board and by the convention, or if either of them did so, we did not hear their voices."

I can assure Mr. Curtis he did not hear me vote against the measure. I had said in open convention a short time before what I thought of the horse play going on and in the executive session I made my position clear. When the executive committee decided on its report, I, unlike Mr. Curtis, knew enough to keep my mouth shut without reiterating and rehashing what I had said before, and so I remained silent. Had I wished to be an obstructionist and quibble over technicalities, it is patent to all who were at the final session I could have done so, for when the final vote was taken there was barely more than half a quorum present.

The whole secret of Mr. Curtis' animus is that he has brow-beaten and controlled the American Poultry Association for so long that he has come to look on it as his own personal property, bag and baggage, and resents and will brook no interference from anyone who does not look, act, and think as he does. I was repeatedly told at the convention that if I opposed Mr. Curtis on anything he would flay me alive. But I went as delegate to represent the great State of Idaho and resented a convention composed of 90 per cent Grant M. Curtis and 10 per cent the balance of the United States and Canada.

I acted, thought, and talked as I thought compatible with the interests I represented,

W. A. McCONNELL - RICHMOND, ILLINOIS

and Mr. Curtis and his rule or ruin methods rolled off my shield of manhood as does water from a duck's back. I did not like his tactics or his way of taking up nine-tenths of the time of the convention, and I expect to be sacrificed on the altar of his wrath. I will do the gentleman the credit to say I think he is an exceptionally brilliant man and has the history, the laws and usages of the A. P. A. down to a fine point. But he lets his tongue run away with his judgment—in other words, he talks too much—and thereby counteracts the good qualities which would otherwise make him a brilliant leader.

Failing in his attempt to coerce so large a committee as the one which handled the Harrison-Penick case, Mr. Curtis intimates that he will attempt to put thru an amendment to the constitution limiting trial juries to "the president, vice-president, the six elective members of the executive board, and three members of the grievance committee." And if Mr. Curtis really goes after it I give him the credit of believing that he will get it. It really is a shame to have any member of the A. P. A. accused of any violations of the laws to be tried by so representative a body as a jury consisting of the state presidents from each state and provincial association in North America.

Mr. Curtis says that in the January R. P. J. he is going to continue discussion of the case. It would make really interesting reading if he would confine himself to facts and the convention records. But can he and make a good story favorable to himself? Lewistown, Idaho. Robert G. Bailey.

Statement of J. D. Veach.

Let us hope, for his sake, that Mr. Curtis did not intend to deceive his readers, by his report of the proceedings in the Penick vs. Harrison case as considered and passed upon by the A. P. A. convention in San Francisco, and sent broadcast thruout the land in the December issue of the Reliable Poultry Journal. If he did intend to deceive his readers, let us pity him for such a weakness, extend a helping hand and invite him to come out of his pouting corner, dry his boyish tears on his coat sleeve, life his face full to the sky, admit his error and joins hands in good-fellowship for the welfare of the poultry industry and the A. P. A., which is greater and more important than even he.

If he remain obstinate, if he continues to snap at those who would be his friends; if he continues to sit in a dark corner and hurl his infamous insinuations (too cowardly to come out into the light and speak plainly) then indeed must we regard him as a traitor to the cause, and notwithstanding the good that he may have done in the past, deal with him as we find him today.

"Cut off your leg that was wounded at Saratoga and bury it with the honors of war—the balance of you hang"—was once said by a real soldier of our country when speaking to a traitorous officer in the service of the enemy. Honor the traits of character that stand out to the credit of any man, but "hang" the spirit which leads men to do as Grant M. Curtis did in the 40th annual convention of the A. P. A. and followed up in his R. P. J.

Analylsis of a Part of Curtis' Garbled Report.

Page 1157—December R. P. J.—"the next morning when the board again convened, the chairman, Vice-President Peters, found on his table a typewritten report."

The fact is, this particular meeting was called for the express purpose of considering this form of report of the board in findings of the previous evening and thus to bear stamp of approval of the entire board when presented to the convention for action.

On the evening before the final adoption of this report by the executive board, and after the second hearing of the Penick vs. Harrison case, a party of three, consisting of President Thompson, President-elect E. E. Richards and J. D. Veach, sat in the public office of the Inside Inn, discussing the case, when Mr. Veach suggested that it seemed proper to report the finding of the board in a formal manner that would make clear the intention of the members, and requested Mr. Richards to dictate the wording of a suitable report, whereupon he did so, and Mr. Veach copied as per his dictation. The penciled report was read aloud and sanctioned by President Thompson. Then Mr. Veach called Mr. Peters, a few feet distant, and showed him the report, whereupon he (Mr. Peters) suggested that, in order that all members of the executive

board be made acquainted with the wording of the report, a short session should be called in the morning to consider and pass upon it prior to presenting it to the convention. Thus it was that the morning session was called and the report adopted—with the added words—again proposed by the same Mr. E. E. Richards—in the presence of Mr. E. B. Thompson—Mr. A. A. Peters presiding, Mr. Jas. G. Dickson, et al, and (for Mr. Curtis' information) without a dissenting voice. Any deep, dark, designing mystery about the source of that report now, Mr. Curtis?

R. P. J., page 1157, December—"Mr. Harrison knew the origin of this report and so did J. D. Veach, but neither of them saw fit to take the convention into his confidence."

Is that deliberate, wilful misrepresentation? Would Mr. Curtis have his readers believe that J. D. Veach sat in that convention hall when he (Curtis) asked that question? Mr. Curtis must have known that Mr. Veach was not there at this time, nor indeed present when the report was read to the convention and adopted as read, as at that time Mr. Veach was in the committee room serving as requested (a duty Mr. Curtis was later known to shirk). How does Mr. Curtis know that Mr. Harrison knew the origin of that note? That part of Mr. Curtis' report was just a mistake—he would not tell his readers a common lie. But the fact is, Mr. Harrison did not know

and could not have known who dictated or wrote that report, nor could he have known that E. E. Richards requested J. D. Veach to go to the public typist and get the typewritten copies—a truth, however.

R. P. J., page 1158, December—"If the executive board of the A. P. A., as composed of the average men, was going to be as careless or heedless in such matters as this case seemed to indicate he (Mr. Curtis) would resign from the association rather than submit to the jurisdiction of the board as a trial body—a trial body that could wreck a man's reputation, destroy his business and deprive him of valuable property."

Read a little further and see what Mr. Curtis would do (if given full sway)—make this trial body consist of a very few—chosen few. Is that big board of "average men" too hard for Mr. Curtis to attempt to influence? Would he rather have that trial board still further reduced until it should become appointive by the one "great" editor of R. P. J.? Perhaps if the executive board, consisting as it did of the president, president-elect, vice-president, secretary, and a goodly number of branch presidents of the A. P. A.—all men, "average men" of course—could have had the assistance of just one "great" man—it might have sent in a report to suit Grant M. Curtis—and then the committee would have been

pronounced careful and heedful (of Mr. G. M. Curtis' interests) and no fault would have been recorded. Bear in mind that the litigants (as the board understood the case) were satisfied with the findings from the start—shook hands and called things square. But it did not suit Mr. Curtis and unless Mr. Curtis is suited he will resign—he said so.

Mr. Curtis' reference to Mr. Veach's, Mr. Bailey's and Mr. Harrison's speaking and voting are so plainly the earmarks of malignant depravity as to become unworthy of further comment.

Mr. Curtis seems to have been singularly deaf to the stinging denunciations of him and his action by other representatives at that convention. Maybe some of them (one in particular) was too close home and too prominent a breeder.

Mr. Veach and a goodly number of others will endeavor to see that the A. P. A. remains representative (governed by the big bunch of "average men") rather than submit further to the tyrannical rule of Grant M. Curtis or any other editor, who essays to ensconce himself behind closed doors and proceed to scatter broadcast garbled reports, attacks upon fellow member's characters, before proper trial, and dirty insinuations as embodied in the December issue of R. P. J.

ALFRED F. GRAHAM Moultrie, Ga.

WHAT CONSTITUTES ONE EGG.

(Here is a "vital matter" presented by Newton Newkirk in the *Boston Post* (Mass.) which, perhaps, might be brought to the attention of that newly made investigating committee of the American Poultry Association.—Ed.)

"Dear Newt.—One morning last week I dropped into a restaurant for the purpose of annexing, as I might say, as substantial a meal as possible on the insignificant sum of 20 cents.

"I ordered a cup of coffee, a slice of toast and ONE boiled egg. (Don't fail to get the egg, Newt., because the whole plot of this story hinges right around this egg.)

"Well, the waiter at last arrived with the eats and placed them before me. I fell upon the food, catch-as-catch-can (stranglehold barred).

"And when I opened the egg, what do you s'pose I found in it, Newt? Two yolks! Yassir, there were the two little yaller yolks cuddled up to each other as cunning as could be. Just then I glanced up and saw the proprietor of the place approaching my table. Here was an acute situation. As the prop. came on I tried to conceal one of the yolks under the edge of my coatsleeve, but in vain. The prop. stood beside the table for a full moment glaring intently at the twin egg. I was very much embarrassed and uncomfortable. Finally I said:

"By the way, good morning, sir—nice weather we're having, isn't it?"

"Yes, it isn't!" he hissed, giving me a black look. Then he went into the kitchen. Before I could gobble up the twin-egg he hurried back and confronted me again. What is worse there was the incriminating evidence lying sunny-side up on my plate.

"Young man," he said sternly, 'how many eggs did you order?'

"Just one mere egg," I replied weakly trying in vain to put a little pep into my voice.

"In that case," he went on accusingly, 'how does it happen I see what appear to be two eggs on your plate?'

"Why, as to that, sir," I replied, 'the one egg I ordered happened to have two yolks in it.'

"In that case," he resumed, 'you will have to pay for two eggs.'

"I refuse to do so," I retorted.

"Then I will have to take one of those yolks away from you," he hissed.

"The proprietor and I talked very bitterly to each other for a few minutes. Finally we reached a settlement by my paying for an egg and a half. Then I left the food factory in disgust and I shall never go there again.

"Newt, will you kindly let me know whether I got a square deal on this egg episode. In other words what constitutes one egg?"

"Manchester, N. H."

According to the most eminent eggologists we have, "Archie," the proprietor of the restaurant aforementioned, was entirely within his rights in demanding that you either pay for the extra yolk or return it to him.

The meaning of one egg as advertised on restaurant menus merely means one individual hen-fruit, consisting of a single yolk surrounded by a single white of the egg, no more, no less. With eggs retailing at 60 and 70 cents per dozen, you can readily understand that if hungry customers should receive any considerable quantity of double-yolked eggs, restaurant proprietors would have to go out of business. With eggs at that price, restaurants have to watch the corners just as closely as their customers have to watch their umbrellas.

Take a plate of beans, for instance. A plate of beans should contain 39 beans. Hereafter count your beans, and if you find over 39 beans you will know at once that the bean counter in the kitchen has made a mistake. In such case, if you are an honest man, you will return the excess of beans over and above 39 to the establishment.

Same way with oyster soup. Suppose you happen to find an oyster in your soup? You wouldn't eat it or try to conceal it to keep the proprietor from taking it away from you, would you? No gentleman who had remaining in his bosom a one last spark of manhood would do that.

Suppose when you are being served with butter in a restaurant, two of those little individual butter patties about the size of a penny should stick together. In that case it would be your plain duty to pry them apart and return one of them with your compliments to the proprietor. Same way if the meat carver makes a mistake and serves you an extra large rump steak. Return part of it to the house and do not try to hide it under your teaspoon.

In other words, "Archie," you must live and let live.

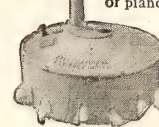

H-I Incubators

have solved the one real problem in incubation—that of automatic moisture supply. Without opening incubator door, moisture is supplied, making egg shells brittle and increasing hatch.

What Are You Feeding Your Hens this Month

For Eggs

If your hens do not lay 20 eggs each, this month, there is something wrong.

Don't blame the hens. It's probably not their fault. They will lay more than 20 eggs each per month if you give them the right food—one that is rich in protein and carbohydrates, along with proper care and housing.

Let our feed experts mix your feed. They have spent years in scientific study and experiment and have produced a feed that **forces hens to lay**, because it contains the food elements which put the hen's physical and egg producing organism in such condition **she's got to lay**.

This wonderful feed is

SCHUMACHER

SCRATCH GRAINS

It is a mixture of a variety of clean, sound, sweet, selected grains, so proportioned that they supply to best advantage the correct amount of protein and carbohydrates for the production of **big egg yields**.

It is a ready mixed, balanced feed—ready to feed. You simply scatter it in litter that is about a foot deep, morning and night, to furnish proper exercise, in addition, keeping Schumacher's Mash Feed in the hopper all the time. Soon you will be gathering **two eggs** where there was only one before.

Schumacher Scratch Grains never disappoint. Always high grade, dependable. Put out by the World's largest makers of feeds—backed by a reputation and a name which stands for the best money can buy. Get it at your dealer's and get the most eggs from your hens. If he can't supply you, write to us.

That "Utility Craze".

Editor American Poultry Journal:

Charles D. Cleveland is "utility crazy" again. In *Everybody's* for December he says: "We must have pure blood, and the more of this pure blood from heavy laying fowls we can get into our flocks the better they will lay. The man who sells fowls produced by crossing one established strain upon another, is deceiving himself and the public."

The "offspring of these fowls, (not having any pure basic blood), does not produce as well as the parents, or anything like it, and the end of the whole matter is that the purchaser of this kind of 'utility' poultry is 'stung'."

"Instead of reproducing itself, it goes to pieces with incredible rapidity."

Now I think this is true, and if it is true, as he alleges, of the individual produced by crossing two strains, then why is it not also true of the breed produced by crossing two breeds?

If not true, will some able expert, judge, editor, or breeder, tell us by what law of nature, the conditions that apply

Spangled Wyandottes are a new variety and were exhibited by L. E. Cook, Oakville, Iowa, at the great Coliseum Show. The picture above of the 1st prize cock shows the fine type and excellent color of this new variety.—L. A. S.

to an individual are annulled when applied to a group of individuals?

If it is admitted that they are equally true of breeds, then why should any breed produced by crossing be given any rating at all as a utility fowl?

They are fancy, strictly fancy, and valuable because they are fancy, and a lot of us who would like to own them, cannot afford to because they are designed for a fancy purpose, to catch the eye of the man who can afford to pay fancy prices for something out of the ordinary, and is willing to do it, if fancy breeders will only keep their disqualified culls out of the hands of Tom, Dick, and Harry, who sell their culls to every ignorant poultry keeper who comes along. Stay with the fancy, there's money in it for those who understand the game, and who will sell only their high class birds and dress the rest for market.

Many a so-called "utility man" is selling fowls today for 50 cents each, to people who should, and would, be your customers at \$25 to \$50 per bird—if the birds you offer were not to be dupli-

What Are You Going to Feed Your BABY CHICKS?

For Growth

If your baby chicks do not get the right start **you know** they won't make profitable layers or broilers.

You know that baby chicks must have food that agrees perfectly with their highly sensitive, digestive organs or they will not only fail to thrive, but **fail to live**.

It takes scientific knowledge of a little chick's digestive tract, also long experience in feed making to produce a **successful** baby chick food. Here again the trained feed experts of the Quaker Oats Co. have clearly shown their wonderful skill in making a feed for little chicks.

SCHUMACHER

CHICK FEED

(Contains Oatmeal)

This feed is pronounced by the World's leading poultrymen as the most ideal food for little chicks ever put out.

Its strong feature is in the fact that it **forces their growth** without disarranging either the digestion or bowels.

It contains a variety of grains, selected and balanced with infinite care, which supply the proper nourishment for growth and development in a form best suited to their requirements.

SCHUMACHER CHICK FEED has attained a remarkable sale and popularity among expert poultry raisers because they have found it unusually efficient in helping them to rear a much larger number of their baby chicks. And you know it is the chicks you rear and grow into the largest layers and broilers that pay the profit.

Be sure the Chick Feed you buy contains oatmeal. Schumacher Chick Feed does. If your dealer can't supply you, write to us.

EGGS for HATCHING

From massive, blocky birds—quality and utility combined. Mating and price list free. Write C.A. Keefer, A.R. 7, Muskegon, Mich.

cated everywhere along the roadside. Just be a little sane in regard to the "fancy-utility craze" and quit selling culls as utility grades, let the public know that such are mongrels from a fancy flock, and have no value save for the meat they carry with them. Quit deceiving the public and quit it quick. You fanciers who are continually claiming utility values for everything that conforms to the Standard, are the greatest deceivers of all, and you are the worst hurt, because you deceive yourselves.

Quit it! For the love of Pat, quit it!

HERB E. SHARP.

Spokane, Wash., Dec. 8, 1915.

WHY I BREED S. C. BLACK MINORCAS.

By J. M. DEAN, Winston-Salem, N. C.

THE principal reason that I breed Single Comb Black Minorcas is that they are the most profitable fowl—and I believe I can prove it!

They lay in Winter, large white eggs,

First Buff Plymouth Rock pullet, Chicago, 1916. A typey pullet of even color and good points thruout. Bred and owned by Milan C. Astle, Momence, Ill.—E. W.

thus furnishing the supply at a lean time and eggs of quality to attract buyers. They are always busy. They do well for the city fancier whose run of ground is limited, standing confinement with the best of birds. For the housewife who is wise, they are unsurpassed as table fowls, their long, deep white breasts furnishing a maximum of desirable meat. The Single Comb Black Minorca is the largest of non-setting varieties. It is hardy, grows rapidly and lays as early as any bird does.

The beauty of the Minorca entitles it to close attention. What fancier who owns this breed, but who is delighted to show it to his friends? The fine carriage, the dark green sheen of plumage, the bright red comb contrasting sharply with it, and the strong white ear lobes—these are a few of the showy qualities of the Single Comb Black Minorca.

Dependable, reliable, regular producers such as these cannot easily be found, in my opinion, and my earnest judgment is that anyone who has once adopted them will never be switched to love another variety, or if he does, he will finally return to his first favorite—the Single Comb Black Minorca.

SUCCESSFUL EGG FARMING

200 Eggs A Year Per Hen

How to Get Them

The eighth edition of the book "200 Eggs a Year Per Hen," is now ready. Revised, enlarged, and in part re-written; 96 pages. Containing among other things the method of feeding by which Mr. S. D. Fox of Wolfboro, N. H., won the prize of \$100 in gold offered by the manufacturers of a well-known condition powder for best egg record during the winter months. Simple as a, b, c, —and yet we guarantee it to start hens to laying earlier and to induce them to lay more eggs than any other method under the sun. The book also contains a recipe for egg food and tonic used by Mr. Fox, which brought him in one winter day 68 eggs from 72 hens; and for five days in succession from the same flock 64 eggs a day. Mr. E. F. Chamberlain, of Wolfboro, N. H., says: "By following the methods outlined in your book I obtained 1,496 eggs from 91 R. I. Reds in the month of January." From 14 pullets picked at random out of a farmer's flock the author got 2,999 eggs in one year—an average of over 214 eggs apiece. It has been my ambition in writing "200 Eggs a Year Per Hen" to make it the standard book on egg production and profits in poultry. Tells all there is to know, and tells it in a plain, common-sense way.

Price 50 cents; or with a year's subscription to AMERICAN POULTRY ADVOCATE, both for 75 cents; two-years' subscription and book for \$1.00, or given free as a premium for two yearly subscriptions at 50 cents each. Our paper is handsomely illustrated, practical, progressive and up-to-date on poultry matters. Established 1892. 44 to 132 pages monthly. 50 cents a year. 3 months' trial 10 cents. Sample copy free. Catalog of poultry literature free. Address

Associations and Shows

Secretaries are Requested to Send in News Items of Interest About Their Shows for This Department

KANSAS CITY, MO., SHOW.

By F. D. ROGERS.

The annual show held at Kansas City, Mo., January 10-15, 1916, while not as large as in former years, had birds of good quality on exhibition and may be regarded as a successful show from every standpoint. Fairly good crowds were in attendance each day, altho the weather was very unfavorable and unquestionably kept many away. It required the services of five judges to place the awards. Their work seemed to be of a satisfactory nature to the many exhibitors concerned.

Barred Rocks, S. C. Black Minorcas, Buff Orpingtons, R. I. Reds, S. C. White Leghorns and White Wyandottes were the largest classes shown.

Chas. H. Rickey, of Clarence, Mo., won most of the prizes in S. C. White Leghorns; his first prize cockerel winning champion of the show. He was an exceptionally fine specimen and well deserved the honor.

J. C. Kern, Kansas City, Mo., made a wonderful winning in S. C. Buff Orpingtons, securing most of the prizes which included best display.

George D. Kenyon, Kansas City, Mo., was also a winner in this class; his first prize young pen being of fine quality thruout.

J. M. Clark, Kansas City, Mo., captured most of the ribbons in R. C. R. I. Reds, some of these winners having won at the World's Fair, San Francisco, Cal., November, 1915

J. C. Rickey, Clarence, Mo., made a nice winning in White Plymouth Rocks.

A. Kurtz, Kansas City, Mo., had on display a fine lot of Dominique Leghorns originated by him that attracted much attention thruout the week.

George E. Studebaker, Kansas City,

Mo., was kept busy demonstrating his newly patented trap-nest to the many interested.

Kansas City is well known as a poultry center. The annual show held here is known as being one of the best sale shows in the middle West.

The full list of awards is as follows:

HOMESTEAD SILVER CAMPINES THE VIGOROUS STRAIN

At the big Boston Show, January, 1916. At the largest winter show of the season—Cock, 1-2-3-5-6; hen, 1-2-3-4; cockerel, 1-3-4; pullet, 1-3-5-6; 1st and 2d exhibition pen; 1st display; special for best cock, hen, cockerel, pullet and pen.

Palace Show, New York, 1915. At the second largest show of the season, Frank L. Platt, Judge—1-4 cocks, 1-2 hens, 1-5 cockerels, 2-4 pullets, 2nd exhibition pen, 1st display, special for color and type, 1st hen, special for color, 1st cockerel.

New York State Fair, 1915. The first big show this season—2nd cock, 1st hen, 3-5 cockerels, 2-3 pullets, 1st old exhibition pen, 2nd young exhibition pen.

Won at Boston, 1915. 13 regular prizes—4 firsts, special for best display, best cock, hen, cockerel and pen.

The comment on the quality and condition of our birds at the above shows was universally—wonderful!

We have many more good birds at our Homestead Campine Farm, and if you are interested we shall be pleased to send you one of our new catalogs. Our aim always is to give full value and satisfaction. We would suggest to our prospective purchasers they book their orders as soon as possible that they may not be disappointed, for from present indications the demand for both hatching eggs and stock will be greater than the supply.

We have mated about twenty pens for 1916, all headed by prize winners and we are giving our patrons the full benefit of every pen and every prize winner and not a single egg is shipped from our farm that we would not use for our own purpose.

Close-To-Nature OPEN-AIR Hovers

The Longest Portable Hovers Now Advertised

Five feet long, warmed evenly by heater on inductive principle. Applies the three Close-To-Nature principles:

CONTACT WARMTH, like the hen
OPEN AIR VENTILATION, not hot air
NON-PILING OR OVERCROWDING

Combines the Fireless with the Lamp—use the lamp for very young chicks and discard it as they grow older; or use lamp during day time but extinguish it when chicks cluster for the night. Hinged for easy cleaning out and airing. Roosting bed of earth or litter, perfectly sanitary. Nothing like these hovers now on the market. Brooders on same principles as hovers. Don't get a brooder or hover until you have read the Close-to-Nature circular. Very low prices.

Close-To-Nature Co., 38 Front St., Colfax, Iowa

Deming's Single Comb Rhode Island Reds

Again they win at Madison Square Garden; this makes three years that our birds have shown their "class" at the Garden Show. Don't fail to look up their records at the egg laying contests. If looking for stock or eggs that will produce winners and layers for you, write me.

H. P. DEMING, Winsted, Conn.

The Consistent Prize-Winners of the Whole Country Are

Out of ten hens entered by Twin Pines Farm, Rohrerstown, Pa., in the Missouri National Contest ending November 1st, 1915, eight secured the 200 egg ribbon. A consistent Hall Equipment Record!

HALL EQUIPMENT CHICKS

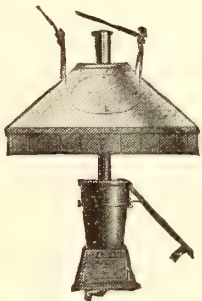

Out of ten hens entered by Twin Pines Farm, Rohrerstown, Pa., in the Missouri Contest ending December 1st, 1914, seven secured the 200 egg ribbon. A consistent Hall Equipment Record!

Birds that make believable records at contest after contest come from poultry farms that rely upon Hall Equipment Chicks—sturdy, healthy, profitable stock—to increase the laying and breeding value of their flocks. Growing, successful poultrymen all over the country use and endorse the

HALL COLONY BROODER

as the one brooder so sensitive to chicks' temperature needs it all but thinks for them. The Hall Company marketed the coal heated colony brooder years before any other was conceived. *The Hall is the original colony brooder.*

Broods up to 500 chicks easier, cheaper, than one-tenth the number can be raised under any small flock system. Has 52-inch round hover; cast iron stove; fire pot carries 14 hours fuel—no magazine needed; coal-ing, shaking, ash removal without raising hover—no chilled chicks, no gas; thermostat absolute in temperature control; no delicate bearings, counterpoise weights, complicated levers.

Write Today for the BIG FREE HALL BOOK

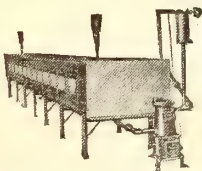

telling what we have learned in nineteen years experience about Modern Brooding Methods, Sanitation, Maximum Flock Size, Fuel Costs, Vital Points of Brooding, Chicks Indoors, Chicks Afield, and hundred of other interesting poultry facts and poultrymen's experiences with Hall equipment. This big free book also tells you all about the

HALL INCUBATOR

(Capacities 1,200 to 20,100 Eggs)

The Original and Standard Mammoth

that is genuinely sectional. Each section measures 29x24x54 inches over all, weighs 75 lbs. If you want to make more money from increased capacity, the Hall will appeal to your experience. If you want to get into the profitable business of commercial hatching, day-old chicks, the Hall will let you start small and grow right—it won't abuse your confidence.

HALL MAMMOTH INCUBATOR CO., 07 Southern Ave., Little Falls, N. Y.

MILWAUKEE SHOW.

Held at the Auditorium January 21-26, 1916—A Real Success From Every Standpoint—Birds of Quality Seen in All the Classes.

By F. D. ROGERS.

THE show held at Milwaukee this year may well be classed with the other shows of national importance and prestige thruout the country. At this exhibition Theodore Hewes, promoter and general manager, again demonstrated his ability in this capacity and much credit should be given him for establishing another national show here in the great mid-west.

First of all, the building in itself is particularly well adapted for an exhibition of this character. The mammoth floor space, and particularly fine light, together with the excellent location, proves it to be ideal from every standpoint. The decorations were very appropriate, causing much favorable comment from the hundreds present during the week.

I have always maintained that well arranged display pens have much to do with the general appearance of any poultry show as well as proving profitable to the exhibitor, and those found at Milwaukee this year certainly played a most important part and added much in making what I can sincerely say, a most attractive and by far the prettiest show room I have ever seen.

In the center of these well arranged display pens was to be found the champion White Plymouth Rock hen, owned by H. W. Halbach & Sons, Waterford, Wis. The wonderful record made by his particular individual was to be found on an attractive sign placed above the pen and was read with much interest by many during the week. Members of this firm were present each day, taking personal charge of their exhibition.

The White Houdans on exhibition by M. L. Starks, of Starks, Wis., attracted much attention. The White Houdan was originated by F. D. Baerman, Dunellen, N. J., and is destined to become very popular in this country. They are in much demand from a fanciers standpoint and are also noted for their great utility qualities, being extra good layers of large white shelled eggs.

Mrs. J. H. Harnly, Zion City, Ill., had on exhibition her 1st prize champion pen of S. C. White Orpingtons at the World's Fair held at San Francisco, November, 1915. These same birds were on display at the Chicago Coliseum show December, 1915. They are unquestionably one of the best pens of this particular variety shown to date. Mrs. Harnly is to be congratulated for her ability to produce birds of this fine quality.

Pabst Stock Farm, Oconomowoc, Wis., breeders of S. C. Rhode Island Reds and S. C. White Leghorns, had two display pens on exhibition; one containing a pen of high-class S. C. R. I. Reds, the other their 1st prize White Leghorn cock bird. This particular specimen was one of the sensations of the show and is without doubt, one of the best White Leghorn males I have ever seen or handled.

After the awards were made, J. H. Durfee, Madison, Wis., had his 1st prize young pen S. C. White Leghorns exhibited in a large display pen. They are birds of exceptional quality thruout and to win this coveted prize places Mr.

Picture of an undeveloped Barred Plymouth Rock pullet owned by Grove Hill Poultry Yards, Box 555, Waltham, Mass. Note the wonderful clean cut barring and grand type, not usually seen in Barred Rocks of this age.

First prize Partridge Plymouth Rock cockerel, Greater Chicago Show, January, 1916. Owned by E. A. Crotser, Fulton, Mich.

Durfee in the front ranks of White Leghorn fanciers.

A. and E. Tarbox, Yorkville, Ill., displayed a pen of their noted Silver Wyandottes, the pen shown here winning 2nd prize at the Madison Square Garden Show, New York, December, 1915-January, 1916, thus maintaining the national reputation enjoyed by these noted breeders.

Several well-known supply houses were well represented by attractive and well arranged booths. Prominent among

them being the Albert Dickinson Co., of Chicago; J. Held & Son; Kneisler Bros., and Theodore Koss, of Milwaukee.

The Licene Co., Chicago, Ill., occupied a large booth space. Mr. John Brinkama, well-known to poultrymen everywhere, being in charge. The remedies manufactured by this company are most reliable and well-known by poultrymen throughout the country.

The classes in most instances were well filled with birds of fine quality. Judges of national reputation placed the

awards in a most satisfactory manner. A. F. Kummer, James A. Tucker, Geo. Wells, Geo. Hackett, W. C. Pierce, Geo. E. Greenwood, O. L. McCord and J. C. Johnston acting in this capacity.

W. W. Henderson, Bridgeton, Mo., made a great record in Barred Plymouth Rocks, winning nearly every 1st and most of the other prizes. His birds showed wonderful type and color and were in excellent condition. His exhibit was in charge of E. Joynson, his well-known manager.

PARKS' Barred Plym. Rocks

BRED-TO-AND-DO-LAY

1889

1916

ARE AMERICAS' OLDEST and GREATEST LAYING STRAIN

In fact they are conceded by such men as Dr. Woods, Grant M. Curtis, Judge Schwab, Prof. Morrison, Wm. Denny and others to be the daddy laying strain of them all.

Their early history dates back to the year 1889, when a flock of 16 at that time averaged but 96 eggs each. While today they have to their credit individual records as high as 290 eggs in one year. Sworn continuous laying records up to 148 eggs. Small flock averages up to 242 eggs. While a flock of 128 averaged 208 eggs in one year and, better still, they just proved their official laying capacity by laying more eggs in the last Missouri Laying Contest than any other breed entered (The Famous English Leghorns included). In addition to making the best winter month record in the contest, Mr. W. H. Grabill, New Castle, Pa., under date February 3, 1916, writes: "I won Egg Laying Contest of New Castle Pet Stock Association on pullets from eggs of you; winning over three pens of Barron White Leghorns." Under date of February 2, 1916, we received the following from Mr. W. W. Brown, Ardsley, N. Y.: "Fourteen pullets from chicks of you just finished their lay year with 3,411 eggs."

That's what over 26 years of careful, selection, trapnesting and pedigreeing for eggs has done, and not all at the sacrifice of Standard qualities, as our 18 firsts and seconds won at Elgin, Ill., Youngstown, O., Utica, N. Y., Wheeling, W. Va., and Altoona, in addition to four American Barred Rock Club Specials show. That's why our customers today include Madison Square Garden winning breeders.

Foundation stock that reproduces. The above in limited numbers only, however, as stock of such quality is not produced and sold the happy-go-lucky way by the thousands. Yes, let the other fellow have your big orders, but remember us on the quality end.

Eggs that hatch, selected, \$5 per 15; \$8 per 30; \$11 per 50; \$20 per 100, Utility, \$2 per 13; \$6 per 45; \$12 per 100.

Day-Old Chicks that develop into layers. Chick and Egg circular free. Large 40-page illustrated catalog that tells all about how America's oldest and greatest laying strain has been produced, a dime.

MISS DOROTHY WOOD, :: **Fond du Lac, Wisconsin**

Fair sized classes were seen in White Plymouth Rocks, J. F. Riemer, White-water, Wis., winning best display on birds of very good quality.

A. and E. Tarbox, Yorkville, Ill., made a wonderful win in Silver Wyandottes, also Speckled Sussex. They are one of the oldest and best known breeders of Silvers in the country and from all indications will make the same record with the now very popular Speckled Sussex.

White Wyandottes were one of the largest classes shown. Frank E. Hering, South Bend, Ind., well-known as a breeder of S. C. White Leghorns and Silver Campines, took the boys by surprise at this show by winning in the White Wyandotte classes, five 1sts and many of the other prizes. His birds were beautifully shown and in grand form. It was conceded by many of the judges that the 1st prize White Wyandotte hen owned by Mr. Hering was one of, if not the best individual birds on exhibition.

S. C. Rhode Island Reds were a large class. Dr. C. W. Barrett, Chicago; Geo. Demlow, Libertyville, Ill.; Chanticleer Farm, Oconomowoc, Wis., and Pabst Stock Farm, Oconomowoc, Wis., being prominent among the winners. The 1st prize cockerel shown by Mr. Demlow attracted much attention and was well placed. The 1st prize pullet owned by Chanticleer Farm was wonderful in color and good type. The 1st prize cock and 1st old pen owned by Dr. Barrett were of fine quality and deserve the honors they received. Pabst Stock Farm made a consistent win in most of these classes.

R. C. Reds were a small class, but with good quality thruout, among the winners being J. H. Carpenter, Glen Ellyn, Ill., and Frank S. Hill, of Indianapolis, Ind. The birds shown by these two breeders being of especially good type and color.

George Johnston, of Oconomowoc, Wis., exhibited three birds in the Light Brahma classes, winning two 1sts and one 4th.

George Cooke, Route 1, Racine, Wis., well-known breeder of Black Langshans, made nearly a clean sweep, winning most of the prizes and best display. Mr. Cooke is a real fancier and the birds shown by him were, indeed, outstanding specimens and far ahead of those usually seen.

Without a doubt, Milwaukee will be another mecca for White Leghorn breeders, judging from the large number shown at this, the first exhibition, it being the largest class in the show with extra fine quality thruout. J. H. Durfee, Madison, Wis., won 4 cock, 2 hen, 4 ckl, 1 yng pen and 2 old pen. Mr. Durfee's birds are of the snappy down-to-date type and clearly demonstrates his ability as a most successful breeder of this ever popular variety.

As before stated in this article, the 1st prize cock bird owned by Pabst Stock Farm was a real star, a bird that would at once command the immediate attention of any Leghorn fancier. George E. Greenwood and G. B. Schmidt were also winners in these classes with birds of especially good quality.

Mrs. John Wolf, Box 40, Merrifield, N. Dak., had on exhibition an exceptionally fine string of R. C. White Leghorns, winning nearly all the prizes, every bird shown by her being placed. Mrs. Wolf's birds are larger than the R. C. White Leghorns found in most

shows and are of very fine type and color. Her 1st prize pullet, also the cockerel heading her 1st young pen showed wonderful type and style thruout.

Good quality was to be seen in the S. C. Buff Orpington classes; E. L. Bemis, Fond du Lac, Wis., winning most of the 1sts with birds showing true

hen with birds of good type and color.

Dr. M. A. Hansen, Osage, Ia., was a prominent winner in Buttercups. This particular strain is well-known. The doctor's birds having been prominent among the winners at the Chicago Coliseum for the past several seasons.

A. and E. Tarbox, Yorkville, Ill., made a very satisfactory win in Silver Cam-

Utility and beauty combined. The above picture shows a pen of White Wyandotte females winning 1st prize in the egg laying contest held in connection with the Chicago Coliseum Show, 1914. Owned by J. H. Powers, 79th St. and Bennett Ave., Chicago, Ill.

Orpington type and a very even shade of Buff thruout.

In White Orpingtons, Novak Poultry Farm, R. R. 1, Box 85, Racine, Wis., made a most wonderful showing; their 1st prize cockerel towering above all others in the class.

Fred Rau, Indianapolis, Ind., exhibited S. C. Blue Orpingtons, winning in all the classes with birds of good color and type.

A. and E. Tarbox, Yorkville, Ill., won 1-2 ckl. and 1-3 plt. in Red Sussex.

In Speckled Sussex, F. M. Gensch, Box G, Omro, Wis., won 1 cock and 1

pin, their 1st prize cockerel being a particularly fine bird.

Water fowl and Bantams were not shown in large numbers. However, those that were on display being of a good quality.

The writer was informed by Mr. Hewes that he is very much satisfied from every standpoint with this, his first year's effort in regard to Milwaukee as a location for a national show, and plans are already being made for next year's exhibition, the dates being January 18-23, 1917.

TOM Barron's Winners

All Egg Contests Prove Them

World's Greatest Layers

Are Still at MORRIS FARM
R. 4 - Bridgeport, Conn.

I have the Most Profitable Flock of Poultry in America, and you cannot afford to be without my blood.

Remember, you take my word for nothing. I state only official records made at National Laying Contests.

In Wyandottes—

\$8.69 worth of Eggs by BARON-ESS V, the 282-egg hen, at North American Contest, 1913-14. Four others laid 274, 271, 258 and 252 eggs. The five laid 1337 eggs, an average of 267, or \$8.21 per hen.

I have a flock of 27 Hens that gave net profit per hen of \$4.67. These are the three Contest Pens I bought of Barron, and which he had at Pennsylvania, Connecticut and Missouri. All my Wyandottes are bred from these.

In Leghorns—

I am breeding the Highest Pedigree Cockerels in the World, out of the 288-Hen, winner at Newport, Eng. This affords new Winning blood for the Barron breeder. Others, 284, 256, 255, etc.

In Buff Rocks—

280, 265, 263, 240, etc. I guarantee all contest birds.

All Breeders tested by Storr's College. Free of white diarrhoea.

"Hello!! I want
SHEPPARD'S ANCONA FARM."
"Yes, this is the folks at
home."
"Well then, take down
this message:"

We made a great win. We didn't leave many prizes for the other Anconas to take home, because we were so much better looking, although there were many prize winners from the Panama-Pacific Exposition and other leading shows of the country. Just think! I won first prize for being the very best cockerel in my class. My brothers won second, fourth and fifth prizes. My sisters did fine. They won first, second, fourth and fifth prizes in the pullet class. My mother won first prize for being the best hen, and her sisters won second, fourth and fifth prizes. We were all proud of my father, because he was such a handsome bird. He easily won first prize and his brothers in the first and second prize pen did show up nicely. Every person admired them. Our cousins in the first prize Single Comb pen were the talk of the show. They were so much better than the birds in the long row of pens, that they had no trouble in getting first prize. Their brothers won first and third cockerel and second and third cock. Their sisters won first, third, fourth and fifth pullet; also second, third and fourth in hen class. We won the two gold special prizes for best display on Single Comb and Rose Comb Anconas. We couldn't stop laying during the show. The people would stand around in front of our coops and gathered the eggs as fast as we laid them. It was a great treat for the city folks in New York City to get so many nice large eggs of such excellent flavor. This makes nine consecutive years that we have averaged such a splendid win.

This wonderful win shows the peerless quality of Sheppard's Famous Anconas and again proves that they are the world's best. If you want to win at your show, book your order now for eggs, baby chicks or select stock. Write for 86-page catalog free.

Quality Speckled Sussex

Honest birds at honest prices. Maples Poultry Yards, Groton, N. Y. Rev. W. Berberich, Owner.

THE CANTON, OHIO, SHOW.

By SHEPARD STRONG.

THE Canton Show has long been known as one of the largest and best held in the state of Ohio. This season's exhibition held December 28th-January 1st proved it again worthy of its reputation. In most instances, the classes were large and competition very keen. The Canton Auditorium in which the show was held is centrally located, being one of the largest exhibition halls in the state.

The judges were J. C. Johnston, G. B. Whittaker and Ira Pavee. Their decisions gave general satisfaction.

Barred Plymouth Rocks formed the largest class of the show; 121 birds single entries and 19 pens. The winners were strictly high-class specimens and I especially liked the first prize pullet.

Buff Plymouth Rocks, a fine class, large number shown and grand quality thruout. The 1st cock, 1st hen, 1st and 2nd cockerel and 1st pullet would win in almost any competition.

White Plymouth Rocks, good size, class and fine quality. The 1st cock, 1st hen and 1st pullet were fine type and color.

White Wyandottes, a large class; winners extra fine.

Buff Wyandottes, Partridge and Silver Campines and Columbian Wyandottes not very well represented in numbers, but good birds among the winners.

S. C. Rhode Island Reds, large numbers and fine quality.

R. C. Rhode Island Reds, were large size and quality worthy of special mention. Quality above the average.

S. C. White Leghorns, second largest class in the show; 61 single entries and 7 pens. Quality of the winners was of the highest order.

Small class of Buff and Black Leghorns.

S. C. Anconas, one of the larger classes of the show, competition being very keen and awards more or less evenly divided.

S. C. Black Minorcas, fair in numbers and quality among the winners very good.

Silver Campines a fine class. The 1st hen, 1st cockerel and 1st and 2nd pullet being good enough to win in almost any show.

Buff Orpingtons, large class and fine quality; winners being choice specimens.

Blue and White Orpingtons fair size. Class of good quality: 1st White Orpington hen being especially fine in type and color.

Speckled and Red Sussex, Dark Cornish, Buttercups, Golden Campines, Andalusians and R. C. Black Minorcas, small classes. Winners of good quality.

Bantams were a surprise both as to the number shown and quality found thruout; being over 100 exhibited, quality being extra fine.

AWARDS AT THE CANTON, O., SHOW.

BARRED PLYMOUTH ROCKS—Fred Anthony & Son, North Lawrence, 1-2 cock, 3 hen, 2 ckl-bred hen, 2 plt-bred cock; S. R. Krupp, Wadsworth, 3 cock, 5 pen, 4-5 ckl-bred hen; Chas. Reed, Burton City, 4 cock, 5 hen, 1-2 ckl, 1-3 ckl-bred hen, 4 ckl-bred pen; W. A. Mason, Ashland, 5 cock, 3 ckl-bred pen; John Betscher, Canal Dover, 1 hen, 4 plt-bred cock; Hicks Burkett, Canton, 2 hen, 3 ckl, 2-3-5 ckl-bred plt, 1 plt-bred pen, 2 ckl-bred pen; C. E. Wilhelm, Wooster, 4 hen, 3-5 plt-bred cock; J. H. Seaton, Canton, 4 ckl, 1-3-5 plt, 2-3-4 pen, 2-5 plt-bred ckl, 5 ckl-bred pen; David Lindsay, Canton, 5 ckl; Mrs. Harvey H. Miller, Canton, 2-4 plt, 2-4 plt-bred pen; H. V. Pay, Canton, 1 pen, 1 ckl-bred pen, 1-3-4 plt-

IT SEEMS TO FALL TO

DUSTON

To Bring Out a

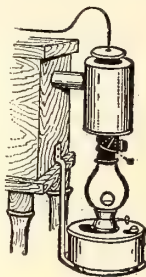

White WYANDOTTE

that really marks an epoch in the Wyandotte world.

"Framingham Chief"

stood out as a wonder for shape and quality. There probably was never shown his equal as a cockerel. That bird marked an epoch. At Madison Square Garden this season another Duston cockerel, "Whirlwind 1st," won. This bird marked another epoch. The judge, an old Wyandotte breeder, attending Garden shows for many years, says: "This cockerel was the best he had ever seen in competition in the Garden." That is going some. I have won 1st cockerel between these males, but such birds are just winners, not models of the classic in Wyandottes. In addition to 1st cockerel, I won 1st pen, 4th and 5th cocks, 2nd and 3rd hens, 1st and 4th pullets, 1st collection (36 points to my nearest competitor's 19). Champion White Wyandotte male, best shaped male, best headed male. Mr. Sewell said after carefully going over the classes, if he wanted a model for a Wyandotte head he would choose 1st cockerel. Best shaped female, best headed female, and seven other specials, winning over Palace and Philadelphia winners. This on top of the winners I have sold proves the claims I have made as to the unsurpassed quality of my stock. I can furnish you breeders and show birds. Eggs from exhibition and practical matings. Send for catalog to the breeder who has made possible the world's best flocks.

ARTHUR G. DUSTON, Box 1020, Framingham, Mass.

SEE

the Heat-Check between chimney and heater? It does the work of two eyes and two hands—busy all the time, and makes an incubator hatch eggs the same as hens do it. Costs \$1.00 each. Attach it yourself to any old incubator or one of latest model. Just as well adapted to heated brooders. Fully guaranteed. Send postal for full description.

QUALITY FARM, H. M. Woods, Carlville, Ill.

Demand Efficiency—Not Mere Claims When Buying A Coal-burning Colony Brooder

The Newtown Colony Brooder—self-feeding, self-regulating—was the first successful brooder of the coal-burning type. It has demonstrated its wonderful efficiency in all parts of the world—under the widest range of conditions—in all climates—in all types of houses. It leads because it represents absolute perfection in brooding devices. The

Newtown Giant Colony Brooder

has rightly been called "the machine without a fault." Note a few of its points of merit:—

Durable—constructed entirely of cast iron excepting the deflector and casing of firepot—built to last a lifetime.

Economical—burns coal, the cheapest satisfactory fuel—large heating surface insures ample heat under all conditions. The sloping surface of the special heat radiator at right angles to the conical deflector radiates the heat to the outer edge of the deflector just where the chicks hover. This gives a hover area double that of any other brooder of the same rated chick capacity.

Convenient—because it is self-feeding and self-regulating—requires but little attention.

Efficient—having perfect ventilation—an even heat day and night—permits each chick to find exactly the temperature it prefers. The large grate surface insures a big bed of fire that will not burn out in cold weather or smother in warm weather—prevents chilling and over-heating.

Safe—danger from fire eliminated—heavy iron construction and fire bowl encased.

Four S zes—to meet the needs of all growers of chicks. Attachment for soft coal furnished if desired.

It is too late to experiment. But you will be safe when you buy the Newtown—

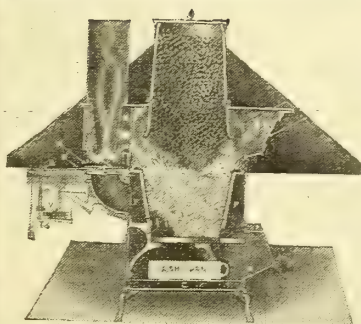

"The Brooder That Made Good"

Get the Newtown from your dealer. Or write us for free catalog which explains how you may have a Newtown installed on our money-back guarantee. We can ship immediately any size desired.

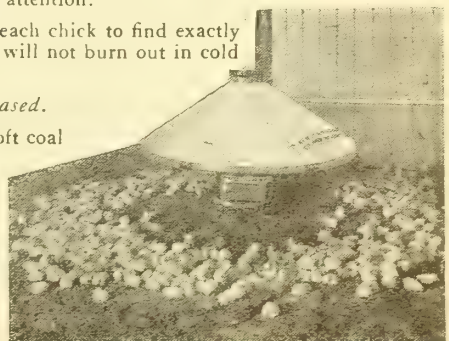

NEWTOWN GIANT INCUBATOR CORP'N

21 Warsaw St.

Harrisonburg, Virginia

Cross section view. Note large coal capacity—durable and scientific construction—simple automatic regulator—encased fire bowl with ventilating ring and large grate surface. The Newtown Heater is double the size of most others.

Be Good to Your Baby Chicks

From these bright little fellows must come your blue ribbon winners and early laying pullets. The one that dies may be a Lady Eglantine or a Wilburtha King. Spray the inside of your incubator with

CARBOLA The Disinfecting White Paint

and destroy, from the start, the germs of roup, canker, white diarrhoea and other fatal diseases that sap their vitality. Carbola is a snow-white mineral paint, with which is combined a disinfectant—the most powerful known to science, yet absolutely safe. Kills lice, mites, nits, etc. Dust your baby chicks with it.

Use It Instead of Whitewash

to paint health and sunshine into every corner of your plant. Comes in powder form and is ready as soon as mixed with water—no straining or bother of any kind. Applied with brush or sprayer. Will not flake, peel or blister. It makes incubators, cellars, barns, coops, nests, stables, runs and brooder houses clean, sweet-smelling and sanitary. Used and endorsed by many of the largest poultry, dairy and breeding plants.

Send to-day for trial package, enough to paint and disinfect 250 sq. ft. —try it instead of whitewash on one of your coops or small hen houses. Money refunded if results are not satisfactory.

Trial Package - 25c (Postpaid. Stamps accepted).
10 lbs. (10 gallon) for \$1.00 plus delivery charges.
20 lbs. (20 " " " \$2.00 delivered free.
50 lbs. (50 " " " \$4.00

Your dealer carries it in stock or can get it for you. If he will not supply you, write us, sending us his name. Do not accept a substitute.

Barred Plymouth Rocks

BUY your exhibition and breeding eggs from a firm that has been in the business for 25 years. No matter what you pay, no one can furnish you superior quality than we can. 34 Premiums at the Ky. State Fair and Louisville Show this past season, prove the quality of "Pope Strains."

Great Armory Show, Louisville, Ky., Nov., 1915
5 First; 6 Seconds; 4 Thirds; 1 Fourth; 2 Fifths
and the Grand Trophy for Best Barred Plymouth Rocks

Kentucky State Fair, September, 1915
4 First; 2 Seconds; 2 Thirds; 1 Fourth; 3 Fifths

We supply cockerel and pullet bred eggs from the best winners we have and when you buy eggs from us you get the best in America to-day. Our quality is wonderful, yet our prices are the lowest of any of the big breeders. You will make a great mistake if you purchase before getting our mating list and catalogue. Send for catalogue No. 3.

POPE & POPE, Box A, LOUISVILLE, KENTUCKY

Day Old Chicks AND Ducklings

EUREKA

PRICE : QUALITY
EFFICIENCY

— A GREAT COMBINATION IN —

The EUREKA Colony Brooder Stove

Don't be afraid of this stove on account of the price. It is made by a large stove manufacturer and sold on a stove manufacturer's basis of profit.

Two Sizes, Solid Cast Iron

\$11.00 — 15.00

Why pay double the amount when you can get a stove that is just as efficient and durable as any made?

I am a large manufacturer of stoves and there is not a more durable stove made in my foundry at any price.

Send for Catalog. Live Agents Wanted Everywhere.

← Mark Your Day-Old Chicks

Now is the time to mark your chicks—then you can easily recognize them when they become larger.

Make identification easy, quick, and certain by using

Key-Ring-O Leg Bands are used by some of the biggest and best informed poultry raisers in the country. Dr. N. W. Sanborn of Holden, Mass., one of the most eminent men in the poultry world, writes as follows:

"Last summer I had some chicks hatch out of eggs laid by my 246-egg record hen, and failed to toe-mark them, so I slipped on the shank a green Key-Ring-O Leg Band. As I have found pullets this winter with the toe-mark of the hen's chicks, I have put on the green band, so I can quickly make up a breeding pen when the season opens."

Key-Ring-O's are put on like a key ring—but easier; light as a feather; last a life-time; made in ten colors; will not fade. And what's more, they stay on when put on.

POULTRY SHOW AT McHENRY, ILL.

First Annual Exhibition Given by the McHenry Poultry & Grain Association, December 28th, 1915-January 2d, 1916.

By F. D. Rogers.

A real surprise was in store for all who visited this the first exhibition given by the McHenry Association. The exhibition was complete in every detail, having all the appearance of a very well established show. The birds were judged by comparison, the show room being cooped thruout with uniform coops.

Over 800 birds were on exhibition, besides over 100 specimens of pet stock and in the neighborhood of 100 exhibitors of grain.

Nearly 2,000 paid admission during the week. Much enthusiasm was shown among the members, and plans are now being formulated for another show next season. Many birds of especially fine quality were found among the winners.

The first prize White Plymouth Rock cock bird, owned by John Grant, of Richmond, Ill., was a remarkable specimen. This particular bird had the honor of also winning first at the Greater Chicago Show, January, 1916.

W. C. Yurs, Elgin, Ill., and A. A. Stringer, Elgin, Ill., made a good win in the S. C. White Leghorn class.

C. H. Leitner, Elgin, Ill., was a prominent winner in S. C. Buff Leghorns, winning both first cock and first cockerel, besides several other prizes. Mr. Leitner's strain is very well known thruout the country.

Barney Baern, of Waukegan, made a most creditable win in S. C. White Orpingtons, capturing all the firsts and many other prizes.

In both the S. C. and R. C. Rhode Island Reds, good quality was to be found. W. A. McConnell, Richmond, Ill., winning many of the prizes in both classes with birds of extra fine type and color.

It was indeed a successful show from every standpoint, and the success attained in this, their first exhibition, is, indeed, a credit to their secretary, Mr. Ed. Hayes, and all others associated with him.

AWARDS AT BATAVIA ILLINOIS SHOW.

C. A. Pierce, Secretary.

OCONOMOWOC, WIS., POULTRY SHOW.

George H. Northrup, Judge.

The Oconomowoc Poultry Association are fortunate in having among their members many interested fanciers thru whose efforts, a poultry show worthy of recognition is annually held. This year's exhibition proved to be one of the best ever given thus far. Most of the well-known and popular varieties were well represented.

F. S. Clausen, Oconomowoc, Wis., was a winner in the White and Golden Wyandotte classes. Mr. Clausen also had the distinction of making a very creditable win at the Chicago Coliseum, December, 1915.

O. R. Eddy, Oconomowoc, Wis., won the majority of the prizes in Columbian Wyandottes. The Columbians owned by Mr. Eddy were also winners at the recent Chicago Coliseum Show. His birds are of a fine quality throughout.

Chanticleer Farm, Oconomowoc, Wis., secured good wins in both the S. C. Red and White Leghorn classes.

Pabst Stock Farm, Oconomowoc, Wis., won many of the honors in the S. C. White Leghorn class, which included best display.

This particular show is of unusual merit and is sure to become one of the best known and popular exhibitions held in southern Wisconsin. F. D. Rogers.

Here is Your Chance to Save Money

Read This Letter from San Jose, California

Simplex Supply House, Pontiac Building, Chicago, Ill.

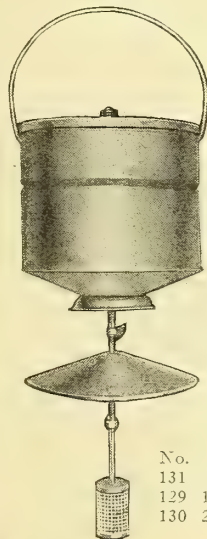

Gentlemen:—The Simplex "Faultless" Poultry Feeder ordered from you some time ago has given entire satisfaction and is indeed "faultless" in every particular in our opinion, as is expressed by the enclosed order for eight more, together with order for twelve Grit Boxes and one-half dozen Dry Mash

229 S. 16th St., San Jose, Cal.

6-Quart
only
\$1.20

\$1.60

10 Quarts
The Original

The original "Kant Klog" automatic feeder; feeds anything from millet seed to whole corn, either mixed or separate. Swinging pendulum motion — absolutely adjustable — simply impossible to clog.

Birds peck at grain in lait carrier, swinging pendulum and grain drops from cup under hopper to deflector and then on ground.

No.	Capacity.	Retail Price.	Our Net Price.
131	6-qt.....	\$1.50	\$1.20
129	10-qt.....	2.00	1.60
130	20-qt.....	2.50	2.00

We Sell Direct from
Factory to Consumer

Save 20% to 33 $\frac{1}{3}$ %
By Buying Your Poultry
Appliances from Us

We specialize in the manufacture of automatic feeders, which save more time and more feed than any other appliance in the poultry yard. No well equipped poultry farm is seen today where automatic feeders are not used. On large farms they save the wages of at least one man. For small flocks they can not be excelled. Filling the feeder once a week is a good deal less work than feeding several times a day. There will be no grain lying around on the ground, no loss from pilfering birds, rats and mice. No staying at home simply to feed the chickens.

In addition to cutting down the feed bills, automatic feeders increase the egg production of the hens. They will be in laying condition at all times, as these feeders give them the proper exercise and they digest every bit of grain they eat.

Be up-to-date and increase the profit from these fowls at least 25% by the use of automatic feeders. Made in styles and sizes shown hereon. We guarantee they give absolute satisfaction. If they do not, we refund the money. That's the guarantee under which we sell all our products—direct to the consumer at wholesale prices.

Simplex Supply House
Pontiac Building Chicago, Illinois

REMEMBER—Your money is refunded promptly if you are not satisfied.

*Note—No. 152 packed two in box and not sold singly.

Our money-saving catalog describing Feeders, Brooders, Incubators, Grain Sprouters, Fountains, Feeding Troughs, Mash Hoppers, Grit Boxes, Brood Coops, Exhibition Coops, Trap Nests, Egg Carriers, Leg Bands and various Remedies and Preparations of merit will be sent upon request or upon receipt of your order from this advertisement.

The first prize Silver Wyandotte cockerel at the Chicago Coliseum Show has all the earmarks of a first-class specimen of the breed. The bird was bred and is owned by A. & E. Tarbox, Yorkville, Ill., who have bred this variety over 25 years.

L. B. Resseguie of Millers, N. Y., showed a fine string of his Barred Plymouth Rocks at the Palace Show, 1915. The bird in the above unretouched picture won second prize in one of the strongest competitions ever shown at the Palace.—L. A. S.

BABY CHICKS

Secure these healthy, bright-eyed little fellows from our famous strains. You'll lay the foundation for a heavy laying flock and for success at the shows next season. We guarantee the chicks to reach you safely.

Monmouth Buffs and S. C. W. Leghorns

Our Buffs won at Madison Square Garden, 1st Cock; 1st, 3rd and 4th Cockerel; 2nd Hen; 1st and 3rd Pullet; 1st Pen, and Best Display.

This is a record unapproached by any other strain—a splendid tribute to Monmouth vigor and quality.

Our birds are large, hardy and vigorous. The pullets mature quickly and are unexcelled as layers. Many of our breeding hens have produced more than 180 eggs during their pullet year.

Send now for mating lists and price lists of Baby Chicks and Hatching Eggs—Whites or Buffs.

Eggs and Day-old Chicks

Rogers' S. C. W. Leghorns

have been carefully selected and bred for vigor and egg production. The females in my 1916 mating pens are extra good fowls, and the males heading each pen are descendants of hardy and consistent layers.

Rogers' Eggs or Chicks assures you of stock whose vitality, laying ability and well shaped heads and bodies bring you satisfaction and profit.

Prices of Eggs range from \$6 per 50 to \$45 a 1,000.

Prices of Chicks, from \$12.00 per 50 to \$120.00 per 1,000—according to the pens selected.

Write today for free booklet, describing breeding pens, special advisory service to customers and my guarantee. It also gives prices on cockerels, pullets and yearling hens.

J. C. Fishel says:

"This Brooder outclasses them all"

This is a copy of a letter just received from the world renowned J. C. Fishel, of Hope, Ind.

Buckeye Incubator Company,
Springfield, Ohio.

My Dear Sirs:

After trying out the Standard Colony Brooder, I am thoroughly convinced that you have a brooder that outclasses all others of this kind.

We have been working it right along with various other coal brooders which we have had several years, and this brooder has demonstrated its superiority over them all.

I am enclosing herewith check for the one you sent us some time ago as per our agreement, and I am requesting you to ship four more of these, immediately, by first freight. Two of these are for my own use, and two are ones which I have induced U. R. Fishel to buy, and I feel confident that he will give you further orders.

Please get these out promptly and do not lose any time in the order, as I am needing one of mine not later than the last of this week.

Yours respectfully,
J. C. FISHEL & SON,
Hope, Indiana.

Feb. 7th, 1916.

This is a pretty strong statement for J. C. Fishel to make and the "STANDARD" must be a remarkable brooder to draw such outspoken testimony from a man with his experience.

Why not write Mr. Fishel about it—or ask the Buckeye Incubator Co. to send you a catalog.

1st and Champion White Rock Cockerel, Boston, 1916.

At the Pre-eminent show of America, held at Boston, 1916, our

A Double "Life Preserver" for Chicks

The critical time with young chicks is the first two or three weeks. If they are hovered in a good brooder they will thrive to "beat the band."

Oakes Economy Hover is more than a good brooder. It is a real "life preserver" in a double sense. Besides doing everything a perfect brooder should do, the wire cage surrounding it is *absolutely fireproof*.

Rats Kill Thousands. So Mr. Oakes invented this hinged cage which can be opened and extended, giving the chicks plenty of room, or closed tightly as desired. Made of steel throughout. Lamp and Lamp box are exclusive Oakes ideas. Only small flame maintains desired temperature. Double curtain is quickly removable. Will hover up to one hundred chicks. Price, complete with cage, \$8.00 Without cage, \$6.00 Write for free booklet showing its remarkable features. Tells how to make the Best Out-door Brooder at little cost.

PRICES
With Cage
\$8.00
Without Cage
\$6.00

Oakes Complete Line of poultry equipment is standard. Your yards may need something for spring. Write now for the "big" catalog showing everything and give yourself plenty of time.

The New "Electric Hen" Oakes' Masterpiece

New this year. Hatches by electricity. A genuine "wonder" but strictly scientific. Economical in first cost and also in operation. If you have lighting current in your house post yourself on the "Electric Hen" before buying any incubator. Free booklet. Write today to nearest address.

Riley's Barred Plym. Rocks

Eggs for Hatching—Season 1916

I have mated up 14 of the choicest pens I have ever owned. My Cockerel Matings are headed by the 1st and 6th cockerels, Chicago Club Show, and by my other famous winners, and my Pullet Matings by the sires of the 1st Chicago pullet and 3rd Palace pullet, and their wonderful brothers. The records made by my customers in the past prove that they are my first consideration, and that I sell eggs that positively hatch winners. My mating list is now ready to mail, and I will be glad to send you one.

WINNERS at Boston

1916

Our Leghorns at Boston won second Pen; fourth Cock; third and fourth Hen. At Gloucester, Mass., won first and second Cockerels; first and

third Pullet; second and third-Cock; second and third Hen; first Pen. All shape and color ribbons; two cups and medal for best pen in show.

Our Wyandottes at Massachusetts State Meet won third Cockerel in as good a class as seen this year. At Beverly, Massachusetts, won first and third Cock; first Hen; first and second Pullet; first and third Cockerel; first Pen; two cups; all shape and color specials. Our Reds in the Essex Co. Egg Contest, (twenty pens, ten birds competing) still hold second place by a big margin.

Stock, Eggs and Chicks Ready. We have never given anything but satisfaction and don't intend doing anything else. Mating List free—send for one.

proposition to dealers or agents.

Manufacturers of Blue Hen Brooders (Hot-air and Hot-water), Blue Hen Round Tray Incubator and Blue Hen Round Mammoth Incubators. Special proposition to dealers or agents.

The above is a cartoon of F. S. Smith, Box C and D, Hamilton, Ohio, the world's largest Single Comb Buff Leghorn breeder. Mr. Smith has hatched out thousands of chicks in December, January and February for years, and by doing this year after year, he has developed a wonderful winter strain layer. His birds are winners at 15 of the largest shows, including Chicago, Hagerstown and the World's Fair at San Francisco in 1915. He writes us that he has the finest flock of birds this year he ever raised and he has bred the Buffs alone for 17 years.

The Real Money-Makers

The dollar mark in the Pittsfield Poultry trade mark is more than a decoration. It is our guarantee to you that Pittsfield Day-Old Chicks are bred to be the biggest producers—to bring you in the most profit on your investment. You won't find "boarders" in Pittsfield Poultry. Try some—and if they don't "make good," we'll never ask you to buy another one. Guaranteed to arrive in perfect condition.

Look at these Low Prices on Day-Old Chicks

Barred Rocks, White Rocks and S. C. R. I. Reds at \$18 for 100, \$10 for 50 and \$5 for 25. S. C. White Leghorns at \$15 for 100, \$8.50 for 50 and \$4.25 for 25. White Wyandottes at \$22 for 100, \$12 for 50 and \$6 for 25.

ORDER NOW—SEND NO MONEY

Better reserve yours now—they're going fast. Tell us how many you want—which breed—when you want them shipped. We'll hold them for you. Send for descriptive folder. It's full of valuable information.

DIAMOND CORN GLUTEN MEAL

VEGETABLE PROTEIN is the best form of protein for egg production and for keeping up the condition of the fowls and producing a good quality of eggs. Diamond Corn Gluten Meal furnishes a highly economical and digestible protein very much more desirable than animal protein.

Diamond Corn Gluten Meal is the lowest priced corn protein on the market, being guaranteed 40 per cent, and should be fed in a mash with other feeds of lower protein content—formulas for this purpose including Gluten Meal furnished on request.

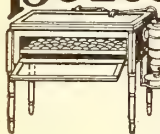

If your dealer does not carry Diamond Corn Gluten Meal write us and we will advise you where it can be secured.

BUTTERMILK

Semi-Solid for Poultry or Pigs

Makes hens lay more and better eggs. Saves the lives of little chicks. Buttermilk, aside from the food value, keeps the bowels regulated and the chick in a perfect state of health which other feeds fail to do.

Buttermilk condensed to a "thick, jelly-like product," eliminating 84 pounds of water from every 100 pounds of buttermilk. You only pay freight on 16 pounds instead of 100. It is 98% digestible. The "Ideal Food" for little chicks and pigs.

Approximate Analysis

Protein 18%, Carbohydrates, (milk sugar) 21%, Ash or salts 4%, Lactic Acid 4%, and Fat 3%.

One Gallon Oil—One Filling

X-Ray Does the Work

If you are using any incubator with a lamp on the end or side you are paying big oil bills. If you are using any incubator whose tank has to be filled more than once to the hatch you are doing a lot of extra work and taking a big chance on the eggs becoming chilled. If you are using an X-Ray Incubator you're saving four to five gallons of oil and—what may be more important—you're saving a lot of work and worry—most important of all, you're getting the *biggest hatches*.

X-Ray Central Heating Plant

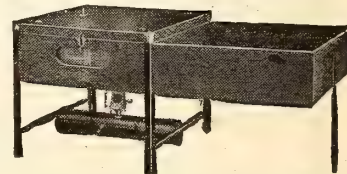

is patented but its huge success has brought out imitations. Don't be deceived. The X-Ray know-how cannot be imitated. The X-Ray Duplex Heating Plant and the X-Ray Generator are exclusive X-Ray features which account for X-Ray supremacy. You ought to have an X-Ray. It's built on the right principles throughout. Insures biggest hatches, sturdiest chicks and least trouble.

We Pay Express Get your X-Ray this year by *Express Prepaid*. Don't wait on slow freight—every day saved is money made. We *prepay express* on X-Ray Incubators and Brooders to practically all points. Send for free X-Ray Book No. 10

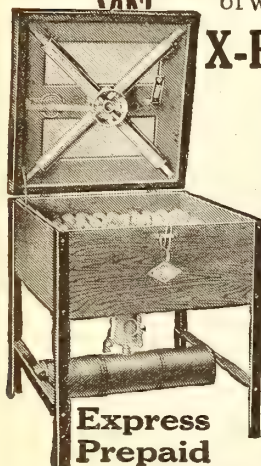

Ask for X-Ray 1916 Book

It tells all about X-Ray Fifteen Big Special Features. Learn all about X-Ray egg tray, perfectly level, no sag, makes turning the egg the pleasure of a minute; X-Ray automatic trip, saves fuel, keeps the temperature in the egg chamber exactly right, automatically regulates the heat. Works itself—cuts down flame if heat exceeds the need—lets on more flame if temperature drops.

Learn all about the X-Ray hinged glass top and all the other X-Ray Special Features.

X-Ray Brooder is also way ahead of all others. Lamp beneath, same as in X-Ray Incubator, saves the chicks—that means profit.

The Best Methods—The Best Foods

Insure the Best Results

This 100-lb. bag of Chick Food will feed 100 newly-hatched chicks 4 weeks, or 50 chicks 6 to 7 weeks.

A Properly-Balanced, Easily Digested Food for Hopper and Wet Mash Feeding. Gives More Eggs.

The "Cyphers Way" of Feeding

WHAT TO FEED, how and when to feed—this is a vital problem of successful poultry raising. For 20 years Cyphers Company has devoted much time and money in testing different methods and rations for rearing *chicks*, developing sturdy *breeders*, heavy *layers* and all kinds of *market poultry*—broilers, fryers, roasters, capons, etc. It was for this important work that we established our 50-acre \$85,000 Experiment Poultry Farm. Here we have *carefully tested* different feeding methods and systems—*developing* and *perfecting* those giving the best results. The "Cyphers Way" of feeding, and the "Cyphers Balanced-Ration Poultry Foods" are the *net results* of this valuable work and long experience.

Cyphers Special-Purpose Foods

Chick Food, Developing Food, Growing Mash, Fattening Mash, Laying Mash, Scratching Food, Fertile-Egg Mash and Meat Scrap.

Start The Chicks Right Hundreds of thousands of chicks *die annually* as a result of *incorrect feeding*. This tremendous and *unnecessary* loss could and should be avoided by the use of properly-balanced, granulated, dry-grain chick food. The use of wet mashes, sour food and guess-work, coarse-grain or by-product mixtures that contain waste materials possessing but little food value, invites *bowel trouble*, *leg weakness*, *stunted growth* and *heavy death loss*. Cyphers Chick Food is composed solely of sound, sweet, nutritious, evenly-granulated grains best suited to the needs of the growing chick—insuring *chick health*, *rapid growth* and *even development*. For Current Price List, address our nearest Branch Store.

The Dandy Colony Brooder

Low-in Price, Large in Size,
Great in Efficiency,

\$15.00

Broods Up to 500 Chicks

Burns Coal or Gas

FULLY GUARANTEED

The Easiest to Care for.
The Safest to Use.

Send us \$15 and we will ship you a Dandy Colony Brooder F. O. B. Keeseville. Use the brooder 30 days, and if it does not do exactly what we claim for it we will refund your money

We have an attractive proposition to offer dealers. The Dandy Colony Brooder is in demand and we want dealers in every city and town. Send today for our liberal offer.

Reasons Why the Dandy Colony Brooder Is the Best Colony Brooder on the Market

No troublesome oil lamps; broods 300 to 500 chicks; saves labor and fuel, needs attention only twice a day. Will distribute an even heat at all times. All parts of the brooder can be easily and quickly cared for; can be operated by a child.

Stove is made entirely of the best grade of cast iron designed to allow for contraction and expansion, flat, all metal hover, guarantees an even distribution of heat, hover opens in half so the fire can be readily reached, heavy iron band reinforces the hover.

Rocker grate, heavy canvas curtain chick-valve on top of the stove under the hover, sensitive thermostat regulates the heat, positively no gas fumes in the room, air cell asbestos padding in fire pot makes the brooder fireproof; ashes cannot fall into litter; self-feeding; equipped for coal or gas.

The Dandy Colony Brooder is used on the most successful farms in the country

Every Dandy Colony Brooder owner is a Dandy Colony Brooder salesman, because he finds in his brooder what the company says is there, and because it will do exactly what the company says it will do, for he knows that after a 30-day trial he can return it and get his money back if it doesn't perform as represented. Order one today from your dealer or direct from the manufacturer.

Rudy's Perfection

White Wyandottes

THE KIND THAT PLEASE

Come to me for pure white, broad backed Wyandottes with well spread tails and perfect head points, so much desired in this beautiful variety. I will treat you right. I can supply you with prize winners or utility birds at prices to meet your pocket-book. Don't think that my prices are beyond your means just because I have the reputation of being one of the most successful breeders of Wyandottes. My prices are reasonable, both for stock and eggs—just send for catalog—and be convinced.

I make a specialty of furnishing breeding pens for utility purposes—mated correctly—the kind that will lay the foundation for a flock of beauty—I term such matings

MY \$35.00 BREEDING PENS

I will furnish other matings and single birds at equally moderate prices. All orders receive my personal attention and all birds are carefully looked over by me before being shipped. My birds are all Farm Raised—they have true range and are milk fed, producing bone, size and vigor. 7 first prizes, 6 seconds, 7 thirds and 4 minor prizes besides special cup for best display and champion Hen, 1915. Those are my combined winnings at the last two Chicago Breeder's Ass'n shows in Jan. 1915 and in Jan. 1916. These winnings exceed the combined winnings of all competitors and should prove to the most skeptical that Rudy knows how to mate his pens. Write for my illustrated catalog—my silent salesman.

Egg orders booked now for early spring delivery. 100% fertility guaranteed.

\$5.00 for 15; \$9.00 for 30; \$15.00 for 50; \$25.00 for 100.

Well Hatched — Half Raised

Did you ever raise chickens that were hatched in a

“CYCLE”?

Brooder Hatcher Complete.....\$ 8.00
Cycle Hatcher Complete..... 6.00
Both Machines Complete..... 12.00

If not you would be surprised to see how fast they grow. That is what “Cycle” users say, not only here but in every foreign country. Read the following letters. We have thousands more of the same kind. Then send your order for a machine that will make your poultry business a success.

The following letter from Mr. Knoche refers to a shipment of Pedigree White Orpington Chickens hatched in the “Cycle” and shipped from Elmira to Des Moines, Iowa, October 26, 1915. The chickens were raised in our Brooder Coop out-of-doors and without artificial heat at the most unfavorable season of the year for raising chickens:

Des Moines, Iowa, Dec. 16, 1915. Cycle Hatcher Company. Gentlemen:—The chickens you sent me October 26th are growing very fast. Although only seven weeks old, they average nearly three pounds each. I have never taken the Brooder out of the coop and they are still using it. All who have seen them say they are beauties. Thanking you for your kindness, I am, very truly yours, F. W. Knoche.

Hastings, Penn., January 26, Cycle Hatcher Company. Gentlemen:—I am very much pleased with the Brooder Hatcher; it gave me excellent success. My chickens are thrifty and hardy and those hatched last summer are laying dandy all winter.—Isadore J. Holtz.

Cleveland, Mo., January 17th. Cycle Hatcher Company. Gentlemen:—Yours of the 10th at hand, and you have my hearty thanks for treating me so well and I appreciate your kindness. I am showing your Hatcher to my friends. It hatches so well that the young ducks come out like popping corn. Out of eighty ducks hatched, I raised seventy-seven.—Lucy Roof.

Steger, Ill., Dec. 26th. Cycle Hatcher Company. Gentlemen:—Have used Cycle Hatchers three years with excellent results. Last year we decided to enlarge our plant, and got a 200-egg machine of a leading make for trial, and after giving it a test for efficiency alongside the Cycle as a pace-maker, we returned it to the manufacturers. While the hatch was good, the condition of the chickens was not to be compared with those hatched in the Cycle, which were better by 100% in condition and appearance. Loss on Cycle hatched chicks at 3 months of age, 4%. Loss on other machine chicks at 3 months of age, 20%. Hence our decision to increase our flock by increasing the number of Cycle Hatchers.—E. J. Hawk.

REGISTERED

S. C. White Orpingtons

Why not get the best and start right with real registered poultry. We can furnish fowls and baby chicks with individual certificate and guarantee of ancestors. We have shipped baby chicks safely over a five days journey. Will guarantee safe delivery of chickens on a three days journey. We give below, copies of a few letters from our customers. We have enough more of the same kind to keep you reading a long time.

Galveston, Texas, January 23rd. Cycle Hatcher Company. Gentlemen:—Beg to advise that the little Brooder, together with the six chickens, came this morning and in fine order. They are a lively bunch and it would be my fault if they are not raised, for they are in good condition. With thanks.—V. H. Austin.

Key West, Florida, Feb. 8. Cycle Hatcher Company. Gentlemen:—Baby chicks shipped by you from Elmira, Jan. 25th, arrived here Jan. 29th in best of condition. All alive and doing fine. Will send order for more later.—J. H. Dawson.

Boonville, Ind., April 27. Cycle Hatcher Company. Gentlemen:—Two years ago this spring I purchased some White Orpington baby chicks from you. They were fine. Such good layers! Please send prices of eggs for hatching.—Miss Laura L. Baker.

The Philo System Book of Progressive Poultry Keeping

It is a masterpiece for short cuts in poultry work. It explains about **poultry secrets** and tells how to make the business a success from the beginning. Nearly half a million sold at \$1.00 per copy, and it is still the leader. Send us 25 cents (stamps or silver) and we will send you a copy by return mail.

FIVE YEARS WITH FIRELESS BROODERS

Calgary, Alta., Canada, Sept. 25. Cycle Hatcher Company. Gentlemen:—For five years we have used the Philo System Fireless Brooders with the best success. This year we tried a Brooder Hatcher and had splendid results. I think the incubator is the easiest managed that I have ever had and I would not think of using a heated Brooder after trying your system.—Mrs. W. D. White.

I will send you by return mail the PHILO SYSTEM BOOK, my new book, “FARMING,” and three sets of COOP PLANS for \$3.00 and will give you absolutely free, SIX THOROUGHbred WHITE ORPINGTON CHICKS and BROODER. Order direct from this advertisement and I will include free of charge a package of chick food to give the PREMIUM chicks a good start. Will hold chicks for later delivery if desired. Catalog Free.

Regular price

75 Cents

During the month of March
we will sell this book, postpaid, for

Only 50 Cents

This offer is for this month only and is absolutely void at the end of the month. We want to give all our readers a chance to get a copy of this book at the rock-bottom price. **No discount will be allowed newsdealers** from this price.

This book is by Dr. Prince T. Woods, and is without a particle of doubt the best medium-priced instructive poultry book on the market. It gives the feeding rations for every period; it tells just what you should do and just when you should do it. We venture to say that it contains more valuable information on raising poultry than any other book its size. It tells all about getting hatchable eggs; incubation and brooding, both natural and artificial; preparing chicks; feeding chicks; how to aid and prevent diseases and losses; tells how to make your own brooder and chick foods—all told in plain language.

Send for a Copy Today

If you are not satisfied, send it back and we will return your money. 50 cents, postpaid, or the book and a 12-month subscription to American Poultry Journal for \$1.00, but this offer is valid this month only.

SPECIALTY CLUBS AND SHOWS.

The election of officers of the Red Breeders' Club of the World was held at the annual club meeting, Milwaukee, Wis., January 24th, and the following officers elected: President, Dr. J. H. Carpenter, Glen Ellyn, Ill.; first vice president, R. V. Hicks, Brown's Mill, N. J.; second vice president, H. De Witte, Oconomowoc, Wis.; secretary-treasurer, F. E. Harrison, Menominee, Mich. The new Year Book has just been issued and is sent free to each member whose dues are paid. The next meeting of the club will undoubtedly be at Pittsburg, Pa. Upwards of \$200 has already been subscribed by enthusiastic boosters for this meeting. Any information in regard to the club will be given by F. E. Harrison, secretary-treasurer, Menominee, Mich.

The 1916 Year Book of the Rhode Island White Club of America, which is sent free to all club members is now ready to mail. All information in regard to the club will be given by Mrs. S. B. Vertrees, secretary-treasurer, Cecilia, Ky.

The United Ancona Club recently elected the following officers: President, J. O. Somers, Bedford, O.; first vice president, Geo. W. Cisco, Patterson, N. J.; second vice president, C. A. Martin, Derry, N. H.; secretary, R. W. Van Hoesen, Franklinville, N. Y.; treasurer, F. C. Stier, Cleveland, O.; auditor, Wm. S. Rathbun, Jamestown, N. Y. The annual club Year Book is now being compiled. Copy will be sent free to all members by addressing the secretary.

At the meeting of the American S. C. Brown Leghorn Club held recently, H. V. Tormohlen, Portland, Ind., was elected president. Noel Hall, Harrisonville, Mo., has been appointed secretary in place of J. H.

Henderson, who resigned. The annual catalog is now being compiled and will be sent free to all members by addressing the secretary.

Show secretaries throughout the country will please note that the eighth annual exhibition of the Great Mid-West Poultry and Pet Stock Assn. will be held at the Coliseum, Chicago, Dec. 13-18, 1916, opening on Wednesday, following the close of the Palace Show in New York and closing the following Monday night. The following judges have been selected: Kummer, Tucker, Rawnsley, Wells, Hackett, Whitney, Pierce, Keeler, Johnston and Rikhoff. Others will be announced later. Please protect these dates. Theo. Hewes, secretary, Indianapolis, Ind.

The second annual exhibition of the Auditorium Poultry Show will be held in Milwaukee, January 18-27, 1917. The following judges have been selected: Hackett, Wells, Greenwood, Greenwald, Pierce and Tucker. Theo. Hewes, secretary-treasurer, Indianapolis, Ind.

The Dominique Club recently elected the following officers: President, A. Q. Carter, Freeport, Me.; vice president, S. F. Yerkes, Mt. Airy, P. O. Philadelphia, Pa.; secretary-treasurer, C. W. Besse, Jefferson, Me.

Charles D. Cleveland, secretary of the Madison Square Garden New York Show, wishes to call attention at this time to the advantage of holding the next annual meet of the National White Wyandotte Club at that show and heartily invites the members of the club to this, their 28th annual exhibition to be held December 29th, 1916-January 3d, 1917. Mr. Cleveland wishes to emphasize the hearty co-operation which will be extended to the club by all the officials of the Garden Show.

The annual meeting of the American White Orpington Club was held at Chicago on December 11th, 1915. A large and enthusiastic number of members attended, the following officers being elected for the ensuing year: President, O. W. Aldrich, Columbus, O.; first vice president, F. S. Bullington, Richmond, Va.; second vice president, G. H. Woolington, Monticello, Ill.; secretary-treasurer, Wm. A. Stoltz, Indianapolis, Ind.

The Indianapolis South Side Poultry Assn. announces the following officers elected for the coming year: President, W. R. Paetzel, Acton, Ind.; vice president, C. L. Ferguson, Indianapolis, Ind.; secretary, G. C. Ott, Indianapolis, Ind.; treasurer, J. G. Hornung, Indianapolis, Ind.

At the meeting recently held by the Cleveland Poultry Breeders' Assn., Cleveland, O., the following officers were elected: President, Geo. H. Poulson; first vice president, J. H. Bush; second vice president, C. E. Ackerman; secretary and superintendent, J. O. Somers; treasurer, J. B. Holmden.

CORRECTIONS.

Glad to mention that the first prize Barred Rock cock, also champion male at the Boston, 1916, Show, is owned and was exhibited by the Grove Hill Poultry Yards, Waltham, Mass. This was omitted last month, due to an error in the marked catalog.

Winnabago Bantam Yards, W. R. Lee, Prop., Oshkosh, Wis., at the Oshkosh Show, January, 1916, won all the prizes in the Buff Cochins Bantam classes, except 5th hen, which was won by Elwood Atchison, Oshkosh, Wis. All awards in the R. C. Black Bantams going to C. A. Barker, Oshkosh, Wis. Thru a mistake these awards were omitted in the February number.

Also announce at this time that the Thornwood Poultry Yards and Monmouth Hatchery, C. A. Sims, Mgr., Crandall, Ind., do not breed Black Leghorns as stated in their ad in the February issue. This should have read Brown Leghorns instead. The four varieties bred by this farm are White and Brown Leghorns, Barred Rocks and Rhode Island Reds.

In our January number, the following awards made at the Valley City, N. Dak., show were credited to E. J. Blumenshine. These prizes were all won by Mr. E. E. Lee and we are glad to give him credit for the same in this issue. White Cochins Bantams: 2 cock, 1-2 hen; R. C. Black Bantams: 1 cock, 1 hen, 1 pt; Golden Sebright Bantams: 2-3 cock, 1-2 hen; Silver Campines: 1 cock, 1 hen; Houdans: 1 cock, 1 pen, 1-2-3-4 hen. S. S. Hamburgs: 1 cock, 1-2 hen; Golden Polish: 1 hen; Fawn Indian Runners: 1 drake, 1-2 duck; Gray Call Ducks: 1 drake, 1-2 duck; Wild Mallard Ducks: 1 drake, 1 duck.

ENGLISH-LEGHORNS

5-6-7 lb. hens, 7 and 8 lb. cocks. Fertile eggs, guaranteed. Trap-nested and Pedigreed Stock.

WILLIAM B. WHITNEY.

Importer and Breeder

Marlborough, N. Y.

Harnly's Quality White Orpingtons World's Champions

Won Championship White Orpington male two years in succession, on different males (these cocks now head two of my best pens). Championship White Orpington male, Chicago Coliseum Show, December, 1914, (defeating the 1914 and 1915 Madison Square Garden first prize winners). Grand Championship White Orpington male at Panama-Pacific International Exposition (competing with the whole world).

At the World's Fair Won the Highest White Orpington Honors

Grand Championship White Orpington male, American Poultry Association medal, California. White Orpington Club special, first prize pen (five birds taking first prize, no other White Orpington breeder had more than one bird win first place), second hen (55 competing), 2nd and 7th pullet, 3rd cock (one only competing) won in each class I competed.

From September 1st, 1914, to September, 1915, won 127 premiums at big shows, 44 first prizes. Some magnificent stock for sale. Start right this season. Get bred-to-lay stock that will produce winners. EGGS—Book your orders now so that you will not be disappointed.

FERTILITY GUARANTEED. FREE CATALOGUE.

REWARD OFFERED—At San Francisco my registration books, containing the addresses of hundreds of visitors interested in my exhibit, to whom I had promised catalogs, were stolen. Any help in the regaining of this property will be rewarded.

Mrs. J. H. Harnly, 2304 Elisha Ave., Zion City, Ill.

QUEEN KATHERINE III
A winning Boston Pullet, 1916

Grand Champion IVANHOE

Has proven his title by winning 1st Cock, Shape Special and Champion Male at Boston, 1916. In competition with 90 Barred Rock males shown by 25 exhibitors (4 more birds than the entire open class at Madison Square Garden this season). Three places on cockerels, two places on pullets, four places on pens. This, with Grand Champion Cock, makes us the highest or largest winner in these three classes.

At Madison Square Garden, three first prizes and best display in competition with international winners on Single Comb Brown Leghorns.

MODEL INCUBATORS Hatch Bigger Profits

HIGHER
QUALITY

Your profits depend on the Hatching record of your incubator and the efficiency of your brooders. **Standard Model Hatching Record is 100 Per Cent Three**

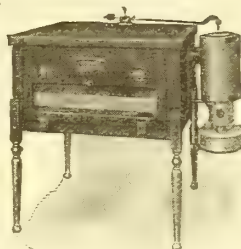

LOWER
PRICES

Consecutive Times—and Model Brooders have become the standard by which all others are judged.

Standard Model Incubators \$10 to \$48

Guaranteed to hatch every hatchable egg. We can't afford to risk our reputation; that's why we make each single part in our own plant, even the thermometer and thermostat.

Hatching made certain—no guesswork. Unhampered by outside tem-

perature. Uniform hatches every time and under all conditions. Automatic regulation. Perfect ventilation and circulation. High finish Chestnut case; the best for sure results.

Remember our prices—then make comparison. You'll always come back to **Models**—the most reliable made; cheapest to operate and the **safest**.

Guaranteed Fireproof

Officially inspected and labeled in our factory by engineers of National Board of Fire Underwriters. Lower insurance—insurable everywhere. Safety lamp-rest and enclosure; patented Elevating Device makes accidents impossible. Operate a **Model** in your dwelling; in the barn; anywhere. Always safe.

Guaranteed Fume-Proof Heater

Shoemaker Poultry Farm

Freeport Illinois

Established Over 26 Years

QUALITY WILL TELL

At the big Chicago Coliseum Show, in classes that held the best birds ever shown there, our birds made the remarkable win of

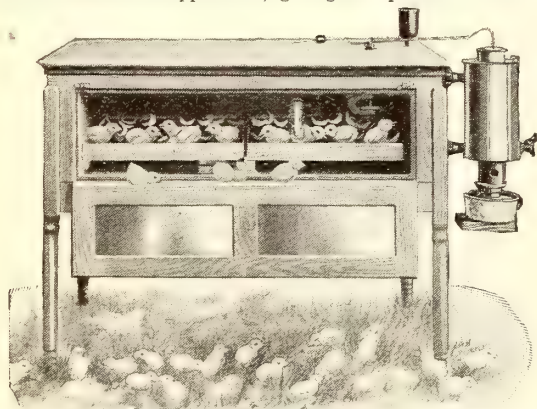

23 Firsts 9 Seconds 7 Thirds 3 Fourths 2 Fifths

A total of 44 prizes out of 55 entries—the largest win of the show.

This wonderful winning proves that "Shoemaker Birds" are the birds for you to buy. It tells the story of why our business has increased year after year ever since 1889. Our motto is "a dollar's worth of value" for every dollar received, that is why we retain our old customers. We want you to know all about our big factory where we manufacture our own incubators and brooders, our mammoth poultry plant where these prize winners are bred and raised, our method of square dealing, so

Send for Our 1916 Book of Poultry

It is not like an ordinary catalog, but a big 200-page text book on poultry breeding in all its branches; no other breeder in the country issues one like it. It tells you all about our wonderful birds, giving you prices on them; all about our Globe incubators, brooders and other appliances, giving the prices on same. It contains a number of color plates of leading varieties of fowls, showing the birds in their natural plumage. It tells you all about poultry ills, how to prevent and cure them, tells you what and how to feed. In fact, it is a book that if interested in poultry you cannot afford to be without. Write for it today, enclosing 15 cents. If you think the information on poultry contained therein is not worth the money, we will cheerfully refund same.

Globe Incubators and Brooders

are the best machines on the market today and we are willing to prove it. We use the most modern of machinery, our workmen are the best that money can employ and no machine leaves the factory until it passes the most rigid of examinations, for our good name is back of every one of them. Our motto is "how good we can build them," not how cheap. The remarkable hatches which our customers obtain is proof positive that you can afford to buy but one incubator and that is the GLOBE.

WILLIAMS' BIRD FARM, BERE, OHIO

Your Success

MEANS Eggs and Baby Chicks from profitable layers. It is a serious matter when eggs are selling for 32c to 55c a dozen and your hens are not laying. Ask the breeder who failed, he will tell you. Our trap-nested

S. C. Rhode Island Reds

are bred-to-lay in winter and they do it. On Feb'y 21st, when the weather was around zero, our birds made their season's record on egg production. This means that our birds are practical business fowls, for they have proven their efficiency as year-round layers. When buying from us you are buying from a farm conceded to be one of the best in the state. Our birds are farm ranged, strong and vigorous. Noted for their rich, red color and ideal type. Order today; you'll find it will pay.

R. I. Reds P. H. Sprague Maywood, Ill.

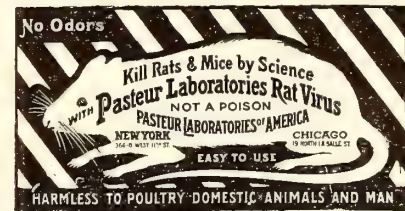

OUR COVER.

In a recent issue of one of our worthy contemporaries appeared a statement by their art department that it was impossible to make unretouched photographs of parti-colored varieties of fowls and to publish an unretouched picture of a prize winning specimen of such a variety, would be a joke and an absolute injustice to the breed, as the photographs made of them would not show the markings at all.

Well, friend reader, we challenge this statement and to prove our contention that it is possible to show unretouched pictures of any variety of fowls, we print on the cover of this issue a photograph of one of the many first prize winners of Partridge Wyandottes, bred and owned by the Sheffield Farms, Glendale, Ohio. The plumage of this bird is unretouched and shows every marking which it possesses. If this picture is a joke, then the sense of humor of our worthy competitor runs in a different direction from ours. We leave it to you, kind reader, whether this unretouched picture is a joke or if it tells the story a thousand times more truthfully than any made-to-order retouched picture ever could.

There is still another reason why we are glad to show this picture on our cover. You, no doubt, have noticed our slogan right above the picture, "We lead—others follow." Well, this is just one of the little things that keep the AMERICAN POULTRY JOURNAL in the front of the procession. AMERICAN POULTRY JOURNAL has put over so many good things lately that we are not ashamed to make this statement "We lead—others follow" on the cover where everybody can see it.

The art department is not the only one that helps keep the AMERICAN POULTRY JOURNAL in the front ranks. Take for example, our two-colored advertising sections in the January issue. This merely shows that the advertising representatives are doing their share. Then again, take the colored supplement in which the journal takes its subscribers to the shows by showing them unretouched pictures of prize winners within a week or ten days after the shows have closed. The splendid illustrated articles on everything pertaining to the industry which appear monthly all go toward keeping the AMERICAN POULTRY JOURNAL in the front, where it has always been.

The "BEST YET" Aluminum Leg Band Cannot come off, comes bent ready to apply. 5 sizes, pigeon to turkey. State breed. 12, 15c; 25, 20c; 50, 30c; 100, 60c. No stamps. Also colored leg bands and seamless pigeon bands. Circular free. Aluminum Marker Works, Dept. J Beaver Falls, Pa.

OBITUARY.

THE death of Patrick McEvoy occurred January 10th, 1916, at Hamburg, N. Y., where he had lived practically retired for the past few years.

At an early age he emigrated from his native Ireland, choosing America for his home. Shortly after arriving in this country, he took a special course in agriculture and soon became very prominent in all branches of the poultry industry and intensive farming.

He was a man of unusual ability in this particular line; success crowning his efforts for many years. The last permanent position occupied by Mr. McEvoy being manager for the noted Crystal Springs Farm at Oil City, Pa. The last few years he acted in an advisory capacity in formulating plans, etc., for poultry and duck farms thruout the country. He was eminently successful in all undertakings and will be much missed by the many who enjoyed the pleasure of his acquaintance.

My record last year and this at CHICAGO COLISEUM, INDIANAPOLIS, GREATER CHICAGO AND MILWAUKEE Shows has never been equalled by any other American breeder of Blues. Latest win, Greater Chicago Show, January, 1916, 1, 2 cocks (5); 1, 3 hens (7); 1, 3 cockerels (9); 1, 2 pullets (11); 1st old pen. I have cocks, hens, cockerels, pullets and mated pens to sell that will give you the success and satisfaction you seek—and every sale is on a guarantee basis. Write for my catalog—it tells all about this, the leading strain of Blues. Pens now mated. Eggs, \$3, \$5, \$7 per 15.

STERLING POULTRY FARM

Box A

STERLING, ILLINOIS

NIXON'S WHITE WYANDOTTES ARE SUPREME

Experts are buying them, why not you? My winnings at Madison Square Garden, 1915, and my customers' winnings at all the big shows this season crown them the Father of all Wyandottes. Show and breeding birds always. The greatest offer ever made for the egg trade, by the setting of 1,000 lots. CHAS. NIXON, Judge and Breeder. Box 2, Washington, N. J.

CLASSIFIED ADS.

UNDER this heading ads will be inserted for seven cents per word each month for less than three months, and **five cents per word each insertion for three months or longer.** Changes in copy allowed every three months. Numbers and initials count as words. All ads will be inserted under **classified headings.** No ads accepted at less than an average of sixty cents per insertion. Terms, cash with each ad. Count the words carefully to avoid delay in publishing. Write your copy plainly, as upon this the correctness of your ad largely depends. When placing your ads remember that advertisers using Classified Ads get better returns from AMERICAN POULTRY JOURNAL than from any other poultry journal—none excepted. On writing any of these advertisers mention AMERICAN POULTRY JOURNAL. All copy for Classified Ads must reach us by the 17th of month preceding date of issue.

BARGAIN EXTRAORDINARY. At the Milwaukee Show, January 21st to 26th, 1916, a show that compared favorably with The Coliseum, in White Wyandottes I won 5 out of 6 firsts in the second largest class in the show. I won 1st and 5th cocks; 1st and 2nd hens; 1st cockerel; 1st and 2nd pullet, and 1st old pen. If you question the quality of my Wyandottes, write Judges W. C. Pierce, Theodore Hewes, or Mr. Wells. I have 8 pens mated of the very best Wyandottes in the country, and I will sell eggs from these pens in limited numbers at \$3.50 per setting of 15 eggs—not more than 2 settings to any one customer. If you are interested, place your order early. Frank E. Hering, South Bend, Ind. 3

ZENOLEUM

Kills Lice and Mites
Disinfects the Hen House, Brooder and Incubator. Cures Roup, Scaly Leg, Canker, Cholera. Prevents White Diarrhoea

Safety First: Zenoleum has been on the market for 17 years. It is a powerful and safe disinfectant. Government vital statistics show that many people have been burned or killed by carbolic acid—more than by any other drug. Kerosene is not a disinfectant, and makes a fire danger. ZENOLEUM is safe to use, day or night, everywhere.

Endorsed by 50 Experiment Stations
Your State Agricultural College is using Zenoleum, and so are forty-nine others.

Disinfect the Incubator
Prof. W. R. Graham, Poultry Expert for the Ontario Agricultural College at Guelph, reports:
"We have succeeded in hatching 7 to 9% more chicks that grow and live well by washing the machine with a 10 per cent solution of Zenoleum before putting in the eggs. It proves of greatest value in maintaining the vitality of the chicks. I would use this substance in every machine set."

Pittsfield Poultry Farms Dip 1,000,000 Eggs
"Each year we use more Zenoleum in incubation. We dip our eggs and wash the incubators. After several years of thorough trial we are convinced it is very much worth while. We now use 185,000 eggs at a setting and Zenoleum is used on every hatch, just as it used to be when we set only 6,000 at a time."

Moderate in Cost—Continue to Use It
"It gives me great pleasure to say that we have used more Zenoleum the past year than in any previous year, not only using it in our incubators, as we have done for a long time, but as a general disinfectant in all our houses, and have used it very freely when doing our summer and fall house cleaning. I know of no better disinfectant and I can heartily recommend it to all poultrymen as being efficacious and very moderate in cost considering the excellent results, and the mere fact that I tried it out thoroughly before using it in a large way and continue to use it, is the strongest endorsement I can possibly give."

MAURICE F. DELANO.

Most of your poultry losses can be avoided by the use of ZENOLEUM. Our wide-open guarantee must convince you that ZENOLEUM is what we say for it. It will help you raise better stock with less worry. Give it a trial at our risk.

OUR GUARANTEE
If Zenoleum is not all YOU think it ought to be, you can have your money back.

PRICES: Postpaid; 8-oz. 25c; quart 50c; gallon \$1.50.

BRADLEY BROS., LEE, MASS.

Barred P. Rocks

we bred and raised, again hold their place as **FIRST WINNERS** at many leading shows.

POINTS OF OUR RECORDS AT NEW YORK:

At Madison Square Garden: 4 Firsts, 4 Seconds, 3 Third Prizes, besides other awards have been won by us at single Madison Square Garden Show. Three times have Males of our breeding won 4 of the Five prizes offered in the class including firsts.

No other exhibitor has ever won THREE FIRST PRIZES at a Madison Square Garden Show where we competed. The highest cash prize ever actually paid for a B. P. Rock so far as has come to our knowledge was given for a male we bred and raised. Three times have Males of our breeding won four of the five prizes offered in the class, including FIRSTS.

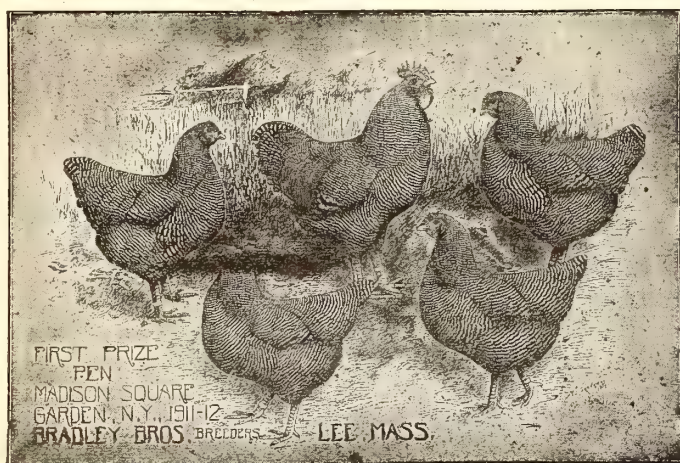

At our last Madison Square exhibit, 1911-12, we won 6 prizes on males; 3 prizes on females; both 1st and 2d yards; \$25.00 Cash Special for best display (won by nearly double the points of the closest competitor), also Silver Cup for best pen.

29 of our "Lee Belle" Females have been First Winners at Madison Square Garden Shows alone, and 60 Winning Males at Madison Square Garden Shows have been bred by us.

Many birds have been sent by us to customers in England, Russia, Japan, South Africa and other Foreign Countries. They arrive safely and give good satisfaction.

Eggs for Hatching We are selling eggs for hatching from our best pens at \$10 per 12; \$20 per 26; \$25 per 33. These, we believe, will produce many 1st winners for our customers the coming season. Orders should be booked at once; even for later delivery. We do not sell baby chicks.

Selected Breeding and Show Birds, Fancy Specimens—Males and Females For Sale. Ringy, blue-tinted, sharp barred birds from our best pens. We never had a finer lot of birds for every demand. Price list free. Illustrated circular free. Our breeders for sale after May 20th, 1916.

FIRST PRIZE
PEN
MADISON SQUARE
GARDEN, N.Y., 1911-12
BRADLEY BROS. BREEDERS LEE, MASS.

"At the Canton Show, when the State Barred Rock Club met, we won with your strain, 1st, 3rd and 5th Cockerel; color special on Cockerel; 5th Cock; 2nd Hen; 2nd Pullet and color special on Pullet; also 2nd Cockerel bred Pullet. We won the state club cup for the best four exhibition birds, viz.: Cock, Cockerel, Hen and Pullet, and also special ribbon for the State Champion Cockerel. The above winnings were made in a class of nearly 300 Barred Rocks. The 1st Cockerel, 5th Cock and 2nd Hen were from eggs purchased from you."

E. B. Thompson's Imperial Ringlet Barred Plymouth Rocks

Win at the Imperial Show
of all the world

Madison Sq. Garden
New York, February, 1915

The Most Wonderful Record in the History of Barred Plymouth Rocks

WINNING AS FOLLOWS:

EVERY 1ST PRIZE OFFERED

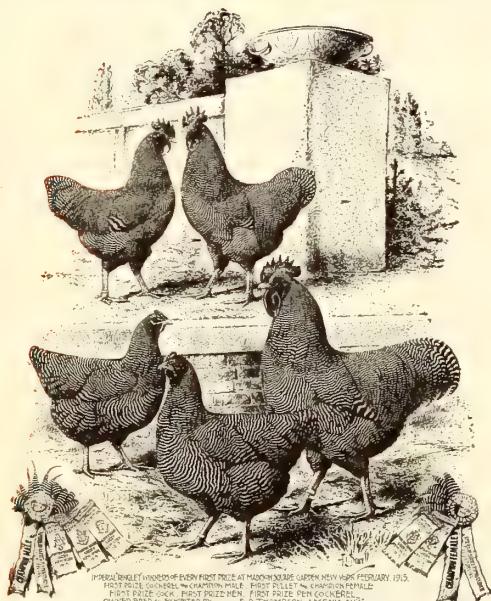

All Ribbons on Cockerels, Namely:
1st, 2nd, 3rd, 4th and 5th Prizes.

Cocks, 1st, 2nd, 3rd and 5th.

Hens, 1st, 3rd, 4th and 5th.

Pullets, 1st, 4th and 5th.

Exhibition Pens, 1st, 2nd, 3rd and 4th.

Winners of every first prize offered at Madison Square Garden, New York, February, 1915—first cock, first cockerel, first pullet, first hen and first pen cockerel.

Sweepstakes Champion Male and Female, Shape and Color Specials—Male and Female. All Silver Cups and Cash Specials. More First, Regular and Special Prizes than any exhibitor of any breed. This is the Capstone to their unequalled record at New York for 27 years.

Grand Winning Show Birds

The finest that all America has ever produced—are now on my farm ready to win Blue Ribbons and Silver Cups for you in any competition in the World in Cocks, Cockerels, Hens, Pullets and

pens. They are elegant in size and shape, fine heads, rich clear blue color, with that sharp, clean cut, narrow "Ringlet" Barring to the skin that wins under all Judges. The prices are reasonable.

Prizes and Silver Cups have been won by my customers on Imperial "Ringlets" in more than a thousand show rooms throughout the civilized World—You can win the same laurels. I will sell you grand exhibition birds for any show and breeders of this richest First Prize New York blood in elegant single birds, trios and pens mated to produce prize winners.

If You Want the Best in Barred Rocks You Must Have My Imperial "Ringlets."
My Customers Are My First Thought and Nothing Is Too Good for Them.

Elegant 70-Page Catalog Upon Request.

EGGS from the finest exhibition matings in the World
\$10 per setting; 4 settings \$35; 100 eggs \$60.

Five Hens Fed on Red Comb

Show Year's Record of 1072 Eggs

Let Charles E. Reed tell his own story. This is his letter:

"Edwards & Loomis Co., Chicago, Ill.

"Gentlemen:—My five White Plymouth Rock hens in the International Egg laying Competition was the heaviest laying pen of White Plymouth Rocks ever recorded in a laying competition. Their total yearly record was 1072 eggs and they were ahead of all varieties of Plymouth Rocks. One hen laid 247, another 244 another 228 and one 192. For the coldest four weeks of the winter they won the special prize for greatest number of eggs laid. These hens and their parents were raised and conditioned on Red Comb Feed."—C. E. Reed.

W. H. Hardin, of Salisbury, N. C., says: "Red Comb Feeds are giving excellent results." During the month of December Mr. Hardin made a pen of S. C. White Leghorn pullets produce 28 eggs apiece.

"Red Comb Means Health"

Red Comb

is a scientifically balanced ration—with the minimum of grit. Percentage guaranteed on each bag. Or without grit if preferred. Ground of the choicest of whole grains. No matter the distance, the cost or the trouble, we see to it that every ingredient is the best earth can produce.

Mail coupon for Free Book, "FEEDING POULTRY FOR PROFIT." We will send name of your Red Comb dealer.

GRAND SILVER CUP.

Won at Madison Square Garden for best display of Anconas, both Single and Rose Combs competing. My birds were awarded Club Specials for best Pen, Cock, Cockerel, Hen and Pullet.

Cups and Special prizes have become almost as matter-of-fact to me (so frequently do Sheppard's Famous Anconas win!) as Ford Jokes. Perhaps because they are so familiar to myself, is why I haven't mentioned and shown them more. Winning has really become a habit with my birds—just as laying has! You start breeding Sheppard's Famous Anconas and you will soon be as genuinely impressed with their fine qualities as are hundreds of my patrons.

Why don't you win cups and special prizes?

Cup Winners Egg Producers Both!

"Yes, Mr. Sheppard"—says a friend, "we know that your Anconas are great birds to produce eggs—but are they, also, exceptional prize winners?" For nine consecutive years, the last time being the 1916 show, Sheppard's Famous Anconas have taken on the average over ten times as many first and second prizes at the *Great Madison Square Garden Shows* as the nearest competitor. I haven't the space to detail other important winnings—but you can read them on pages 28 to 39 and page 77 in the new Sheppard Book which I will send you promptly if you use the coupon or write. Read these extracts from letters I received when compiling the latest catalog.

They Sound Like "Plenty of Eggs"—Do They Not?

"Laid three times as many as others"—"Wonderful laying qualities"—"Lay in dull season"—"Laying at remarkable clip"—"They just shell out the eggs"—"Most eggs in coldest weather"—"Laying at four months"—"Laying at 20° below zero." On pages 54, 55 and 56 of the catalog you may read the complete letters from which we have above briefly quoted. Send for the catalog, if you want prize winners, egg producers, eggs for hatching, baby chicks—and read the evidence in full. See my other ads on pages 660 and 661.

Columbian Plymouth Rocks

Eggs, Day-Old Chicks and Stock from our winners at Madison Square Garden and Palace and sons of "Columbia Queen," champion heavy-weight hen, record 286 eggs. Mating list free. Mention A. P. J.
T. J. ENSLIN HACKETTSTOWN, N. J.

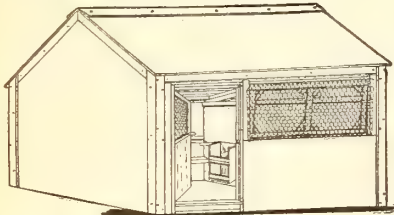

Hear Ye O Israel

Why are ye wedded to your idols? If you are not making a success of this poultry game, try pheasant rearing. The new industry requires no knowledge of how to properly mate. Remember the fool never changes, but the wise man does. Get in on the ground floor, it takes the ground floor for a fellow to win in any game. Send 30 cents in stamps for our colortype catalog; it gives you full details, if you don't like it return in 48 hours and your money refunded. We also offer S. C. Buff and Blue Orpingtons, R. I. Reds, Houdans, Wild Turkeys, White African Guineas, Japanese Longtails and Silkies, White Runner and Fancy Ducks for sale.
CHILES & CO., Mt. Sterling, Ky.

Other bargains from \$45 to \$195. All standard makes, including Steinway, Knabe, Emerson, Kimball, taken in exchange on Starck Pianos and Player-Pianos. Also used player-pianos \$195 to \$345. 30 days FREE Trial. Easiest payments. 50 music lessons FREE. Write quick for Bargain List.

P. A. Starck Piano Co., 888 Starck Bldg., Chicago, Ill.

Mention American Poultry Journal when writing to advertisers.

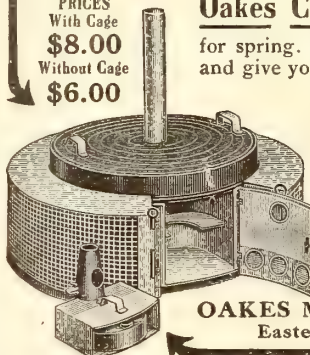

A Double "Life Preserver" for Chicks

The critical time with young chicks is the first two or three weeks. If they are hovered in a good brooder they will thrive to "beat the band."

Oakes Economy Hover is more than a good brooder. It is a real "life preserver" in a double sense. Besides doing everything a perfect brooder should do, the wire cage surrounding it is *absolutely fireproof*.

Rats Kill Thousands. So Mr. Oakes invented this hinged cage which can be opened and extended, giving the chicks plenty of room, or closed tightly as desired. Made of steel throughout. Lamp and Lamp box are exclusive Oakes ideas. Only small flame maintains desired temperature. Double curtain is quickly removable. Will hover up to one hundred chicks. Price, complete with cage, \$8.00 Without cage, \$6.00 Write for free booklet showing its remarkable features. Tells how to make the Best Out-door Brooder at little cost.

PRICES
With Cage
\$8.00
Without Cage
\$6.00

Oakes Complete Line of poultry equipment is standard. Your yards may need something for spring. Write now for the "big" catalog showing everything and give yourself plenty of time.

The New "Electric Hen" Oakes' Masterpiece

New this year. Hatches by electricity. A genuine "wonder" but strictly scientific. Economical in first cost and also in operation. If you have lighting current in your house post yourself on the "Electric Hen" before buying any incubator. Free booklet. Write today to nearest address.

Raise Chicks After You Hatch 'Em

Broods 500 chicks; measures 4 feet across center; hover 9 inches from platform; strong and durable. Price, complete with famous blue-flame lamp, ready to set up and use, no extras, f.o.b. Elmhurst

\$25

Schwalge Fresh Air Colony Brooder

One of the greatest problems of successful poultry raising has now been solved by the invention of the Schwalge Fresh Air Colony Brooder. Hovering chicks seldom get enough fresh air. The result is that they become weak and die, or if they live, they seldom reach their full growth.

This brooder, with the blue-flame lamp can be turned down low on warm nights when the chicks need but little heat. Low fire cannot be maintained in a coal-burning brooder.

A steady stream of pure, fresh air is drawn into the brooder, heated by the lamp and then is distributed from the center to all parts of the brooder. A continual renewal of fresh, warmed air takes place. Chicks do not suffocate.

The Schwalge Fresh Air Colony Brooder is absolutely reliable in any weather. Economical to operate; does not require constant attention; reservoir is located outside of building, where it is easily refilled; no special chimney for ventilation required.

Save the chicks you hatch; raise them to maturity and cash in on them. The Schwalge Fresh Air Colony Brooder will help you to do it.

Send your order direct from this ad. Guaranteed to maintain uniform heat and supply correct amount of fresh air. Description free if you write.

Aldrich White Orpingtons

have won 268 prizes during the last 5 years at *Chicago Coliseum*, Buffalo, St. Louis, Pittsburgh, Cleveland, Atlanta, Allentown, and *Madison Square Garden*, and have also been winners in the National Laying Contests. Our cockerel winning **FIRST** this season at both Chicago and Madison Square, is now the

Champion of America

Our pens contain the only living First Prize Cockerels at Madison Square Garden, four in number, two of which have also won twice as Cocks; also the only Male that has ever won twice at Chicago Coliseum. All \$5 pens are headed by males bred from 200-egg record hens.

If you wish to breed exhibition birds with a high laying record and want the most beautiful, hardiest and quickest growing variety of fowl, try the White Orpington, and send for our catalog and mating list, giving prices and complete description of the thirty best pens of White Orpingtons the world has ever known. It is free if you mention American Poultry Journal.

"SUNLIGHT" POULTRY FARM S-C-W LEGHORNS

Greatest Known Layers. (Young Strain) PREPAREDNESS

This is the one big question of the present day that is being talked about everywhere in this big country of ours. While the big men of our nation are discussing this question, don't you think it is time for you to prepare for next winter, if you have not already done so, by placing your order for eggs and baby chicks right now? April and May are the ideal months of the year to get out chicks for winter layers. In placing your order with me for eggs and chicks, you are sure of getting them from mature birds that are bred to lay, raised properly, housed in open front houses and on free range the entire year, thus insuring you **chicks that live** and grow and mature into birds worth while. My birds are strictly utility fowls, altho a good many of my birds go into the shows and win. All eggs and chicks are produced from birds here on the farm and hatched in Candee Mammoth Incubators. Prices are as follows:

Eggs for Hatching

1 Setting of 15 Eggs.....	\$1.50
1 Setting of 50 Eggs.....	3.50
100 to 500; per 100.....	6.50
500 to 1000; per 100.....	6.00
1000 to 5000; per 100.....	5.50
5000 or more; per 100.....	5.00

Baby Chicks

25 to 50 Chicks.....	\$.14
50 to 100 Chicks.....	.13
100 to 500 Chicks.....	.12
500 to 1000 Chicks.....	.11½
1000 to 5000 Chicks.....	.11
5000 or more Chicks.....	.10

Order direct from this adv. and save time. 80% fertility guaranteed on all eggs. Full count and safe arrival guaranteed on Baby Chicks. Orders will be booked for future delivery on receipt of one-fourth the purchase price; the balance to be sent before order is shipped. Stock for sale at all times. Let me have your order, it will receive my careful attention, prompt shipment and your approval. Remember, The Sweetness of Low Prices never equals the Bitterness of Poor Quality. Write your wants. Catalog free.

SUNLIGHT POULTRY FARM, E. N. Lemon, Owner, Lynchburg, Ohio

Rudy's Perfection White Wyandottes

100%
Fertility

100%
Guaranteed

Why not start with a strain noted for egg production as well as exhibition qualities? My eggs are priced within the reach of every one. Hundreds of my customers have hatched winners from eggs bought of me. All my own guaranteed winners each season are hatched from the very pens from which I sell eggs. Fifteen grand pens now mated for 1916, headed by sons and grandsons of Rudy's Perfection, Perfection Jr. and Superior. Every female is of high perfection quality. **EGGS FROM THESE PENS, \$5.00 per 15; \$25.00 per 100; utility pens, \$15.00 per 100.** Order direct from this ad, or send for egg circular. REMEMBER—I'm the only breeder guaranteeing 100 per cent fertility without extra charge. I replace all infertile eggs returned to me.

GEORGE H. RUDY, Route 15, Mattoon, Ill

Are You Setting Eggs This Spring?

What kind will you set? How many will you Hatch out of each setting? If you should pay \$10.00 for a setting of Grand Prize Eggs, and for some reason none of them should hatch, would you get your money back. Think it over. This Spring set Martling Silver Campine eggs. You can be absolutely Sure of a hatch, because we guarantee a specified number of chicks from each and every setting of eggs we sell. Martling Silver Campines are the most famous of the variety in this country. Have been Exhibited from coast to coast with magnificent results—Awarded "World's Championship" at Panama-Pacific Exposition. They lay large chalk-white eggs in great abundance; for which they have been awarded 1st Prize wherever exhibited.

The Maples

GROTON, NEW YORK

TWO SWEEPSTAKE CHAMPIONSHIPS

Coliseum, Chicago, December, 1915

1st Cock, Coliseum, 1915

S. C. White LEGHORNS

I won the lion's share of honors in the great contest between quality S. C. White Leghorn breeders of the East, West, North and South. Because of the strength of the class competing at the Coliseum, no fair-minded man will question the right of my stock to be considered the equal of any strain in the country in exhibition qualities. So far as egg-laying qualities are concerned, they have for years been unsurpassed.

Just Consider That in S. C. White Leghorns at the last Coliseum Show

I won first and third in cocks; I won first young pen.
I won first and fourth in cockerels; I won second and third old pens.
I won the Coliseum silver cup for best 5 cockerels.
I won the Coliseum silver cup for best display.

SILVER CAMPINES

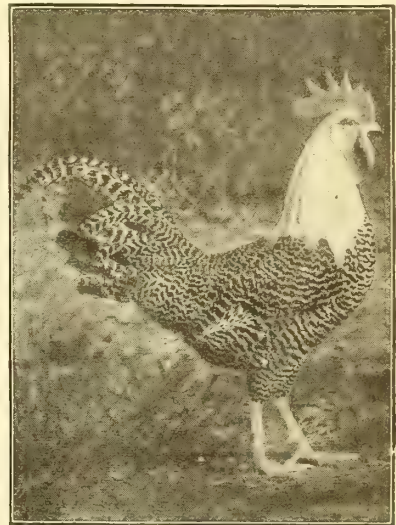

At the last Coliseum Show, Chicago, the very cream of the best fowls of the country were exhibited.

THE CAMPINE CLUB OF AMERICA

held its annual meet at the Coliseum, and the leading breeders of the East, the head-liners in Campinedom, were present with their exhibit. The classes were the very strongest, every one agrees, that have ever been exhibited, and

THE GREATEST HONORS WERE MINE

I won two of the five awards in cockerels.
I won three of the five awards in hens.
I won three of the five awards in pullets.
I won three of the five awards in old pens.
I won three of the five awards in young pens.
I won the challenge cup of the Silver Campine Club of America.
I won the Coliseum cup for best display.
I had 48 Campines entered; 38 were placed.

1st Cockerel, Coliseum 1914

HATCHING EGGS HATCHING EGGS HATCHING EGGS

I now have 25 pens of S. C. White Leghorns mated and I also have 25 pens of Silver Campines. March 20. I have 2,000 baby chicks. I have tested eggs from every pen and guarantee a high degree of fertility.

Regular Price of One

This offer will appeal to every red blooded poultryman. The monthly publications embraced in this offer are leaders in their chosen field and well known throughout the country. All three are pioneers—they have been tested and have passed the final examination—the “survival of the fittest.”

American Poultry Journal, Chicago, Ill.

Established 1874

Has the envious reputation of being “The One Great Poultry Paper of America.” It's the oldest poultry paper in America and the largest and best poultry paper in the world. Its circulation covers the entire United States, Canada, Mexico, and several hundred copies are sent to foreign countries where the best is considered just good enough. It contains from 68 to 252 pages each issue, and is mailed to subscribers promptly on the first of each month.

American Poultry Advocate, Syracuse, N. Y.

Established 1892

Is one of the most widely known and consistently advertised publications in the field. It is composed of interesting and instructive reading and is conceded to be one of the best, clean-cut poultry papers in the east. Published monthly.

Poultry Item, Sellersville, Pa.

Another “breeder's choice;” is well edited, progressive and instructive, finding popular favor among those poultrymen who enjoy good editorials, not “muckraking.” The helpful hints given in the many articles are advantageous to both amateur and professional. Published monthly.

These three papers, the choice of breeders, will be sent to you postpaid every month for one year, at half price.

American Poultry Journal, 1 yr., \$1.00	} All 3 for \$1.00
American Poultry Advocate, 1 yr., .50	
Poultry Item, 1 yr., .50	

The three papers being sold together for the price of American Poultry Journal alone makes this one of the best offers which can possibly be made.

Both new and renewal subscribers may take advantage of this offer. New subscriptions will commence with current issue. Renewal subscriptions will be extended one year from expiration of present subscription. This offer void after May 31st, 1916.

American Poultry Journal, Chicago, Ill.

Established 1874

"The One Great Poultry Paper of America" is conceded by all to be the leading poultry paper of the world. It contains from 68 to 252 pages in each issue, profusely illustrated; contains no free reading notices or puffs for advertisers, but sound common sense articles, the kind that are profitable to both amateur and professional poultrymen. Mailed to subscribers promptly on the first of each month, it arrives when expected and avoids disappointment.

Western Poultry Journal, Cedar Rapids, Ia.

Established 1889

Has long been recognized as one of the most up-to-date and progressive poultry papers of the West. Edited by E. E. Richards, the present President of the American Poultry Association. Clean, instructive common sense articles on the care of poultry—and editorials of like nature make this one of the favorite poultry papers in the Western States.

Poultry Keeper, Quincy, Ill.

Established 1883

Is the second oldest poultry paper of America. Although not as large as the other two, it has a following of readers who stand by it like the "Rock of Gibraltar." The many interesting articles each month make it well worth reading and it fits nicely into this well selected combination of poultry papers.

American Poultry Journal, 1 year, \$1.00 } **ALL**
Western Poultry Journal, 1 year, .50 } **FOR**
Poultry Keeper, 1 year, .50 } **\$1.00**

No matter where you are located, how many chickens you keep or how much you know about poultry, you cannot afford to let an opportunity like this slip by. Think of it—**ALL THREE** for the regular price of American Poultry Journal alone.

Both new and renewal subscribers may take advantage of this offer. New subscriptions will commence with current issue. Renewal subscriptions will be extended one year from expiration of present subscription. **This offer void after May 31st, 1916.**

The Cyphers Co's Equipment

Our Big Free Book Tells You How Don't Fail To Get It

FOR the past 20 years Cyphers-built Incubators have been used almost exclusively by all the **big, successful poultry plants** and the **leading fanciers** in the United States and Canada. Can you, Reader, do better than follow the example of the men and women who have succeeded—who have **made money with their poultry**? Many of these poultrymen **first tried** other makes, but soon discarded them, and now frankly acknowledge they could not have succeeded without the "Cyphers." **"The Profits in Poultry Keeping,"** our 172 page (size, 7½ x 10 inches) Catalogue and Poultryman's Guide, tells how these big

successes have been accomplished. The introductory "Open Letter" by Grant M. Curtis, President of Cyphers Company, should be read by every poultryman—it tells in a helpful way **how to avoid costly mistakes**. Send a postal TODAY to our nearest office and you will receive the book by return mail—FREE.

3 Styles-8 Sizes \$12 to \$40

WHEREVER chicks are hatched—whether in large or small numbers—Cyphers-built Incubators are the acknowledged leaders—they **hatch better, last longer**, require **less attention** and produce **larger, stronger and healthier** chicks.

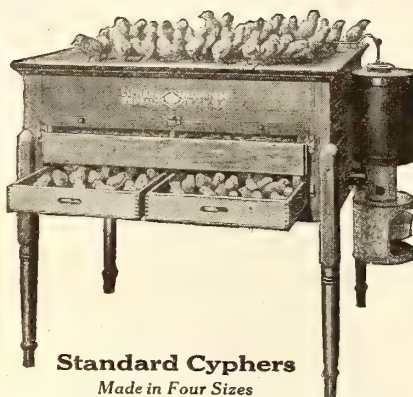

Whether you prefer a hot-air or a hot-water incubator, there is a Cyphers-built machine in a size to suit your needs.

Don't make the **very costly** mistake of **experimenting** with wrongly-constructed, so-called "cheap" hatchers, that will not—that **cannot**—give you the big hatches of strong chicks you have a right to expect.

Now is the time to **increase** your hatching capacity. April and May hatched chicks are easy to raise. The weather then is favorable and the chicks can be given the advantage of outdoor brooding. **Do not delay**, therefore, ordering needed equipment.

The Superior

Hot-water heated hatcher. Has all the time-tried features of Cyphers standard of design, construction and finish. The water boiler and tubular tank heating system are of heavy-weight copper. Lamp has seamless bowl; burner is best on market; case is **wood**, attractively finished in golden brown, with brass trimmings; has **double walls**, well insulated; equipped with Standard Cyphers Complete Regulator. Has **forced water circulation**; is automatic in ventilation. (See illustration.) **Fully guaranteed to you.**

Immediate Shipment Guaranteed

At each of our SEVEN places of business (see opposite page) we have complete stocks of Incubators, Brooders and Hovers READY for immediate shipment on receipt of your order. Place your order now, therefore, and get the benefit of the full hatching season.

Standard Cyphers

The machine that for **twenty years** has been recognized as the **"standard hatcher of the world."** Tens of thousands of them are in successful use in every civilized country on the globe. They are the last word to date in incubator building. Are built to hatch successfully in **all climes, under widely different conditions**, in the hands of all sorts of people, and with reasonable care will last a lifetime. (See the illustration herewith.) **Satisfaction guaranteed to every purchaser.**

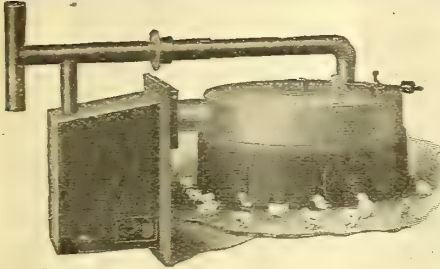

The Columbia

The best incubator on the market at the price. Hot-air heated. Has **wooden** case, attractively finished in dark green, with brass trimmings and **double, well-insulated walls**. Seamless-bottom lamp bowl, best quality brass burner. **Cyphers complete regulator**. Fume-proof, forced-draft heater. Automatic in ventilation and embodies **diffusive** principle. **Fully guaranteed.**

**Columbia
Hot-Air**
Made in Two Sizes

Insures Your Success in Hatching and Brooding

Adaptable Hover. Price, \$9.00!

The "Cyphers Way" Saves the Chicks

THE brooding season is right before you now. Your chicks will need your **best attention** and the best "foster-mother" that can be provided. In fact, upon your choice of a proper Brooder, and the care you take of your chicks, depends very largely the **net profit** you will make this season.

The "Cyphers Way" of brooding chicks will **prevent losses**, and help you bring your poultry into market at the **best prices**. You cannot afford now to "experiment." Cyphers methods have been tested by 20 years' experience—our own and that of thousands' customers.

Paradise Brooder

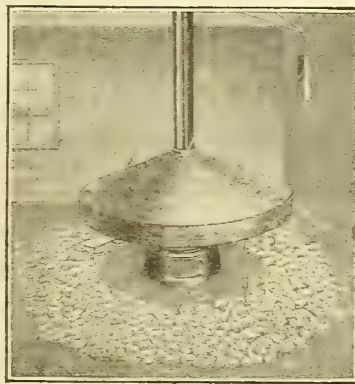

For indoor brooding. Base section (two compartments) can be bought and used separately. Later, one or more upper sections can be added. Heated by one Blue-flame Safety Oil Stove. No special houses or coops are needed, and chicks can be raised in any living room; chicks are **always in plain sight**, up off the floor, away from cold, dangerous drafts; chicks cannot chill, cannot overheat, cannot wander away and get lost or be destroyed by rats, cats, etc.; saves time, labor and fuel. **Fully guaranteed.**

Four-Section Paradise Brooder. Capacity, 400 Chicks.

Adaptable Hover

For outdoor and indoor brooding. A popular and efficient Brooder at a **low price**. Tens of thousands of these standard Hovers are in successful use in all parts of the world. Is **self-regulating, self-ventilating, fume and gas-proof**, all-metal, and fire-proof. Lamp positively cannot blow out. Easily attached to **home-made brooder case**, large goods box or small colony house. Used as heater in all Standard Cyphers Brooders. (See illustrations herewith.) **Fully guaranteed to you.**

Colony Hover. Price, \$15.00 Up.

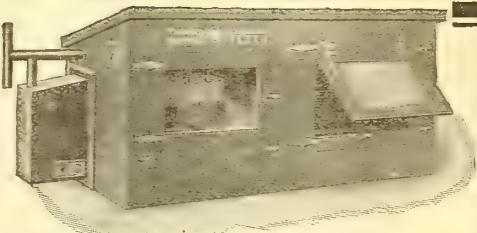

Colony Hover

Coal-burning. Broods chicks in flocks of 300 to 1,500, and at **lowest expense**. In health of chicks, in low cost of labor and fuel, in simplicity and ease of operation, it **has no equal** for brooding chicks in large numbers. Its ample fuel capacity and automatic regulator, will keep the chicks warm throughout the coldest night, maintaining a regular temperature of 90 to 95 degrees under hover and keeping room at desirable temperature. Made in **five sizes**. Write for Special Circular. **Fully guaranteed.**

from profitable layers is your only guarantee for success in the poultry business.

ISN'T it a serious matter when eggs are selling at 40c to 60c per dozen and your hens are not laying? Ask the man who has failed. Also ask him if he would recommend the breeder he bought his stock from. You cannot be too careful in the selection of your foundation stock; the stock from which you will produce your future layers. I breed for eggs and can supply you with stock that will lay when the egg prices are high.

That Means Your Success.

EGGS

I can usually make shipment of eggs promptly upon receipt of your order. I would, however, advise that your order be booked in advance. This will assure delivery when you desire them. Prices, 10c, 20c and 30c each.

BABY CHICKS

I am booking orders for baby chicks for delivery any time, weather conditions permitting. Early orders simplify matters and assure mutual satisfaction. Instruct me to book your order now. Prices, 20c, 35c and 50c each.

Buy Your Foundation Stock Now

In all of my eight varieties, namely, White and Buff Orpingtons, White and Barred Rocks, Rose and Single Comb Reds, White Wyandottes and Single Comb White Leghorns, I can supply Breeding Stock, young or old, that will produce a future flock of the kind that has in the past given entire satisfaction to over 3,000 customers. I herewith present your opportunity to start right. My free instructive catalog has helped others and will undoubtedly help you. Write for your copy today.

AMERICAN POULTRY JOURNAL

VOL. XLVII No. 4

APRIL, 1916

O. L. KING—PIONEER POULTRYMAN

O. L. KING, proprietor of Glen Eyre Farm, Rockford, Ill., specializes in Standard quality Barred Plymouth Rocks and farm fruits and vegetables. He was born near Bushnell, Illinois, in 1860, grew to manhood in a farming district where poultry were not given the attention they are today by up-to-date farmers. He became interested in the farm flock of "barnyard chickens" at an early age and in 1880 started with thorobred poultry. Light Brahmas were his first standard variety and he bred them until 1890, when he added a flock of Black Langshans and bred both varieties until 1895. About this time he became interested

in Barred Plymouth Rocks and he bred all three varieties for the next five years. In 1900 a change of location made it necessary to drop both of the Asiatic varieties and they were sold. From that time he has specialized in Barred Plymouth Rocks and has shown and won in leading Illinois shows. He has not exhibited as extensively as many other breeders, but since 1902 has exhibited thirteen times, winning 48 out of a possible 65 first prizes, and a grand total of 151 out of a possible 325 regular prizes. Eight times his birds won color and shape specials and in 1907 took the State Barred Rock Club cup.

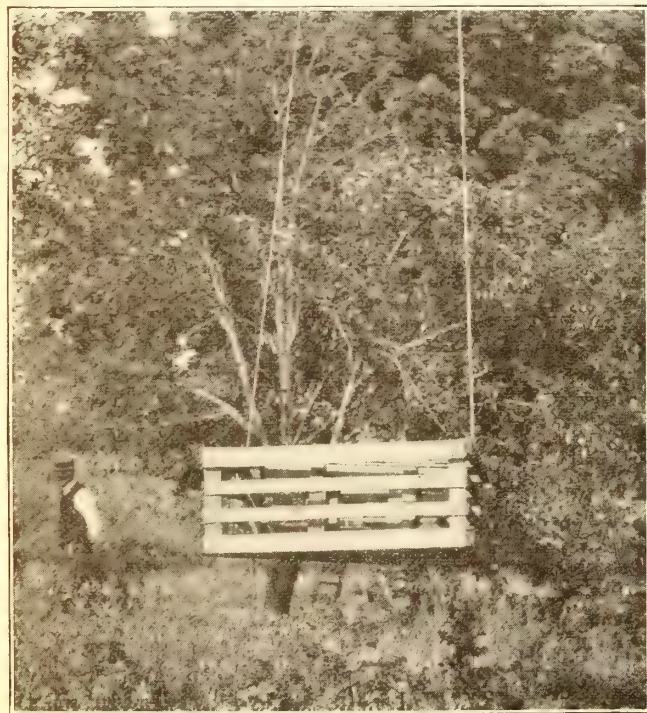

April a Busy Month for the Poultryman

He Has Chicken Thieves to Foil, Broody Hens to Break, Live Fowls to Ship, Brooders and Colony Houses to Clean and Green Food to Grow for Chicks. *By Maurice H. Decker*

THE COMING OF THE SPRING and Summer months bring to most of us the fear of losing a part or even all of our best fowls by theft. To my notion the worst misfortune that can befall any poultryman is to be awakened some fine morning and discover that some of his stock has been carried away in the night by that meanest of characters—the chicken thief. The comparative ease with which fowls may be purloined and disposed of at a good profit makes chicken stealing a very attractive means of liveli-

hood to certain classes of society, and until there are in universal effect stringent laws that deal with this offense in just proportion to its seriousness, the only protection the poultryman has is his individual efforts in keeping his property under lock and key at night and in being prepared to deal effectively with any intruder upon a moment's notice. The usual punishment meted out to chicken thieves is an indeterminate sentence of from two to fourteen years in the penitentiary, but by the exercise of good behavior many of these worthies gain their release after a stay of but 24 months, and in some cases have been caught at the same old business soon after they clear the prison gates. I am of the opinion that the sentence for this offense should be made so severe that individuals in need of a little easy money would think the matter over very carefully before attempting to rob their neighbor's hen roost. A good stiff sentence would certainly do a lot to break up the operations of those who go into chicken stealing as a business and devote the whole of their efforts and ingenuity to their operations. About a year ago our local authorities rounded up a couple of men who were using a light auto truck with covered body and built-in crates in their raids thru several adjoining counties. When we think of some big hulking, lazy, lout stealing, to buy his beer and tobacco, the flock of hens in which are wrapped all the Summer's hopes, efforts and income of some farm-

Slat crate hung from apple tree used to break up broody hens. See article "April a Busy Month for the Poultryman."

wife or daughter, it is safe to say a majority of us would surely welcome back that ancient institution of punishment—the whipping post for such offenses.

A large per cent of the risk from theft can be eliminated upon most farms by the proper arrangement and fencing of the poultry buildings and yards. Large buildings and the entrance gates of the yards should be located as near the owner's or manager's dwelling as is practical and convenient. A six-foot closely woven poultry fence with one or two strands of barb wire at the top, the whole strung upon slender steel posts is a difficult barrier to climb, and with the gates locked or well located, many attempts of intruders to enter the premises will be warded off by general appearances alone. Heavy fowls roosting upon fences or in the low branches of trees are particularly favored by and accessible to thieves, for if handled carefully they may be plucked down one by one with little noise and disturbance. If you have light and active breeds you cannot do better than encourage them to roost in the orchard or shade trees in warm weather, as they will usually fly high and can be depended upon to start a chorus of warning at the sight of the first intruder. Last year our apple trees sheltered over 400 hens and pullets, and any thief who could have caught and made away with any of them without awakening the whole neighborhood would have been welcome to all he could take. The presence of even a cat or rat would start the entire flock cackling at the tops of their voices.

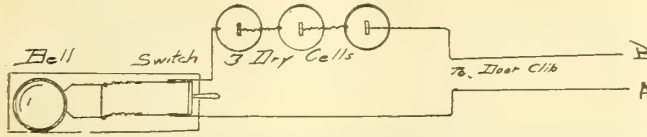

As we have never suffered any losses of baby chicks we scatter our brooders out well from the house at first and then when the birds are weaned from heat and begin to gain a worth-while weight, we place them in larger colony houses which are moved up rather close, where we can keep an eye on them at night. Then as the fowls are big enough to range about considerably we encourage them to hustle for their feed as far out in the fields as possible during the day.

All of our colony houses and laying houses are fitted with locks. Unless fastened with a blind hasp, one that covers the heads of the screws that hold it in place, the padlock is rather a poor protection, and no matter how arranged, is never infallible. I have never been able to fix up a padlock and hasp that could not be pried or "jimmied" open by an ambitious thief, altho to date we have never had any such fastenings broken open. The chicken thief is usually of the sort that travels the path of least resistance, and if one's premises possess evidence of security and thoughtful safeguarding, he will seldom resort to much force or trouble to effect an opening. A colored gentleman of rather obscure antecedents who was in the habit of working off and on thru our neighborhood a few years back, told once of running across a poultry house one evening with a padlocked door swung upon leather hinges, but I do not believe many up-to-date poultrymen would be guilty of such an inconsistency, or as easily pacified as was the elderly gentleman who, upon hearing a disturbance among his hens, called out in their direction: "Who's in there?" and was answered in dark complexioned accents: "Nobody but us chickens, Boss!"

Our buildings of medium and large size we prefer to close with a good stout door secured by a cylinder night lock. These locks are unpickable, offer no hold for a "jimmy," cost from \$1 to \$1.25, and can be easily hung by any amateur. In case of there being two or more doors in one building we put the night lock on the door nearest the house and secure the others with heavy gate hooks and staples. Ventilating openings should be backed by quarter inch galvanized wire cloth on the inside, a material having several advantages over ordinary poultry netting to offset its higher cost. First, it is nearly impervious to rain, snow and wind in a house of tight walls; second, the meshes are too close to allow it being cut by tin shears—unless an opening is first started with a chisel; a pocket knife has no effect upon it; and lastly

it is worth while if only for its better appearance and indestructibility.

A good watch dog, preferably an Airdale, should be upon every poultry plant and a good electric alarm along the lines of the one illustrated in the accompanying drawing will be excellent insurance for buildings located some distance away. The first drawing shows how we construct a simple, reliable alarm catch, which is nailed to the door jam in such a

This shows how to wire up the complete system. We use a lamp cord about six feet long next to the bell and switch so they may be moved up close to the bed at night, and hung on the wall out of the way during the day. (See "April a Busy Month for the Poultryman.")

manner that when the door is closed the brass spring is compressed and does not touch the copper wire. The instant the door is opened this strip of spring brass flies out and establishes connection with the wire and the bell rings until the door is closed or the switch is opened. This catch is made of a thin piece of soft wood for the base, a strip of thin brass one-half inch wide and two inches long, two binding posts from old dry batteries and a piece of copper wire. The second diagram shows how to connect up the line wires to the alarm catches, the batteries, alarm bell and switch. In arranging an electric alarm it must only be remembered that a complete circuit must be formed with a break, which, when joined, will give the current freedom to sound the bell. The switch forms an extra break to use in the day time when the doors would be opened more or less or left open. For line wire we used what is known as office wire No. 18. If you do not care to make the catches they can be purchased for about 15 cents each from electrical stores. They are termed electric door springs. We have had a system of this sort in use four years, the farthest house with an alarm being 700 feet distant and the equipment is still in serviceable order. We ran the wires from tree to tree about 25 feet high, where they are practically invisible. One of the best protections against local talent is to put in an alarm and then let it get around over the neighborhood. In order to be prepared when the bell sounds in the night we keep a repeating shotgun loaded with shells containing No. 8 shot, which will create a suitable impression without any danger of seriously wounding anyone. A chicken thief deserves a good shooting up, but personally I would not care to shoulder the responsibility of the act.

* * * *

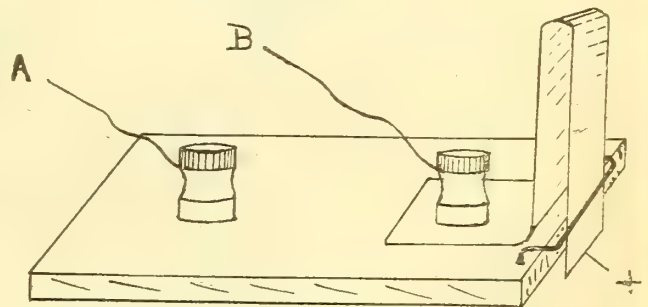

Hens that go broody late in the season are unusually persistent in their inclination to set and very difficult to break. Some of our Plymouth Rocks will spend ten days to a week in a slatted crate and come out clucking as vigorously as ever. Here is a time when the poultryman is tempted to lose his temper and deal harshly with such fowls, but this is always poor policy, both from the financial as well as humane side, and good results will be obtained with little trouble by using a swinging crate as shown in the accompanying photo. This crate hangs from a limb 20 feet above and when full of "clucks" sways back and forth, tipping sideways just enough to discourage them remaining long in a easy, comfortable position. We do not feed hens in this crate. Just tie a deep pail of water to one corner. We have found this to cure very obstinate cases of the "fever" in two to three days with very little trouble or provocation on our part.

* * * *

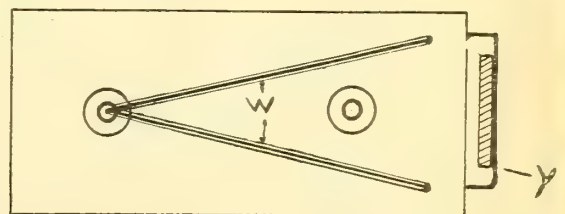

While the practice of shipping live fowls to be sold by commission merchants is not the ideal way to dispose of ones stock at the most profit, a great number of poultry raisers are forced to depend upon this outlet to market a portion of their chickens. A market for example such as South Water street of Chicago will take anything in the line of poultry that exists and one is sure of always getting cash for any number of fowls in any sort of condition. This does not mean, however, that it pays to ship in poor, thin, sickly

birds, for here, as well as at every other market quality gets first consideration. Reasonable number of fowls are shipped in crates 48 inches long, 30 wide, 10½ inches high for broilers not over two pounds, 12 high for heavy broilers and mature hens and ducks, and 15 to 18 high for geese and turkeys. Twenty-four hours before the fowls are to be shipped, discontinue all soft feeds and give them cracked grains only. This puts them in better shape to endure the journey without much shrinkage and being more or less tired of the soft feed they will devour the cracked corn fed upon this day and that put in the crates and arrive at the market with a full crop free from hungry worries. All fowls will shrink more or less, according to their age, weight and distance shipped. The last consignment we sent over were three-year-old hens and one crate made the good record of shrinking only one and one-half pounds. The birds weighed 101½ before sending, and we received a check for an even 100 pounds at an advance of one-half cent over the market's top, which goes to prove that we were well satisfied with the returns and that all commission men are not dishonest. The express companies carry market poultry at reduced rates and consignments are generally sent collect to the commission firm. When the goods are sold the express charges, the 5 per cent commission and cost of returning the crates (15c each) are deducted from the shipper's check. Broilers weighing one and one-half to two pounds seem to sell best upon all markets the season thru. Poultry should be shipped to arrive from Tuesday to Friday, as little selling is done on Saturday and enough stock is carried over from the past week to supply Monday's demand. The stock should be delivered to the express agent at such a time that it will leave promptly, travel at night, if possible, and arrive early the next morning at the market. Two tags should be tacked upon each end of each crate and each should bear the full name and address of both the shipper and commission merchant. Never put tags on top, as they are liable to be torn off. The tops of the crates should be constructed so the fowls are unable to put their heads thru, for if they do the baggage men are liable to place another crate or box on top with disastrous results. Care should be taken not to overload the crates, particularly in warm

DOOR CLIP

Plan of BOTTOM

These two drawings show construction and wiring of the door catch. The house door presses the brass spring at the point Y. The bottom plan shows how the wires are connected to the binding post B and spring. The wires marked W are insulated and continuous with Y. The post that holds the brass spring is connected electrically by being in direct contact with it. (See "April a Busy Month for the Poultryman.")

weather. Sixty pounds of light broilers, eighty to ninety pounds of heavy young fowls and 100 pounds of mature birds are all that should be shipped in one crate, and if the

weather is very hot this quantity should be reduced. In very cold weather we tack one-half of a loose woven burlap sack upon each side of the crate. This helps to keep them comfortable and breaks drafts, but one should always remember that express offices and cars are liable to be heated and two dozen four-pound fowls generate quite a little heat of their own. Commission men do not furnish crates free to shippers, but sell them and send by express or freight, therefore the poultryman will be saving money to make his own packages. Crates are made with 2x2 corner pieces joined with 1x2 strips 30 inches long, with a floor or bottom of 1/2-inch lumber (bevel siding or poplar clap boards will do) and sides and top of 4 foot lath. The lath are put on about 1 1/2 inches apart and two in the middle are left with the nails driven only two-thirds in, to be opened when the fowls are removed. Such a coop should not weigh over 36 pounds, and if well seasoned lumber is used will be amply strong.

* * * *

Last Summer we were pestered considerably by one large hawk who seemed to have little fear or respect for our regular dummy figures set up here and there to fend off unwelcome aerial visitors. His favorite trick was to fly quietly into a large maple tree from the side opposite our dwelling and wait until some unfortunate chick strayed close enough and then—swoop, and both were gone. After several attempts to bag him with the shotgun we rigged up one of the "scarecrows" in the tree itself, where among the leaves it closely resembled a man crouching. This worked perfectly, for thereafter the big bird shunned the tree like poison and soon stopped his visits to our farm.

* * * *

One of the best green foods for chicks is sprouted oats, and we have recently discovered that we can sprout them quickly in the sand trays of our moisture incubators and

with real benefit to the hatches. Oats in these trays will make long slender sprouts in a week's time and we get out three different fillings to each setting of eggs. It is a recognized fact that growing vegetation gives off oxygen and absorbs carbon dioxide, a process exactly reversed in the incubation of eggs. We have never obtained any exceptional hatches in the machines used to sprout grain, but the chicks all seemed of extra vigor and extra size. Along in the latter part of the hatching season when eggs hatch poorly and the chicks do not seem as full of "pep" as those of earlier dates we use these machines that have sand trays to accommodate the oats entirely and the two past seasons have proven to us at least that the practice is one worthy of pursuance. We leave the last "sprouting" in until the chicks are removed from the incubator and as it is more or less full of dust and broken shells we give it to adult fowls only.

* * * *

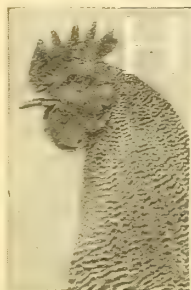

In the Spring and early Summer, when the poultryman has incubators, brooders and baby chicks to care for, in addition to his adult fowls, he should take advantage of every possible efficient "short cut" to lessen his duties. One little "kink" that saves us considerable labor when cleaning out small brooders and brood coops is to cover the floor of each with a square piece of rubber roofing. Especially in brood coops does this save us much trouble, and it enables us to do a more sanitary job. There are the droppings of the hen in addition to those of the chicks to remove, and it takes but a few moments to pull out the piece of roofing, scrape it off and replace. When the floors under the hovers of small brooders are thus covered the litter never becomes damp or caked, and the wood remains in its original new, un-germ-soaked condition. It would be better probably to have two squares for each coop. Then one could be "sunned" or washed off by a possible rain while the other was in use. If you are one of those by far too fussy poultrymen who believe every house, brooder and coop should be cleaned daily, this will enable you materially to put your conviction into practice.

The above Red Sussex male was hatched April 1, 1915, and won first cockerel at New York State Fair September 13, 1915. Photo taken at the time. Bred and owned by Frank L. Platt, Swanton, Ohio.

Barred Plym. Rocks and Their Breeding

CHAPTER III. Characteristics in Shape and Color of Young Birds Compared with Adult Specimens. *By C. H. Latham, Lancaster, Mass.*

NOW OFTEN WE READ in the advertisements of the winning exhibitors, "I won the most coveted prize of all. First on Cockerels," and the writer has been guilty of feeling the same way in making a winning in pullets. It shows the trend of the breeder's ambition, which is to produce a young bird that will stand out above anything else, old or young.

Wouldn't we really be getting nearer to the *real thing* if we bent all our efforts to producing the adult bird to be the best, regardless of age? Should not the adult

bird—the cock or hen—be our *finished product*, rather than to see how far we can force Nature in perfecting shape and color in the young bird which is "*still in the making*?" A large number of us work with this one thing in view: to push the young bird to the limit to conform to the Standard as closely as possible, and give no thought to what the cock or hen may make of themselves.

There is a change in the specimen, both in shape and color, that takes place when moulting its youthful plumage. It emerges from being a cockerel or a pullet and becomes a cock or a hen. The young and old birds compete together in Champion and Sweepstake prizes, and if the young birds win, as they often do, it is with more or less injustice to the older birds; for the reason that the young birds are still in the making, and may, when fully matured, *fall far short of being the birds they promised to be when young*.

Take a young bird of either sex that closely approaches the ideal in shape, will it still be the same when matured? It is safe to say that in a very large number of birds that it *will not* hold the ideal shape. There is always a settling down in

the general carriage of the bird, usually more in body than in breast, and a bird that seems well up on its legs and close to the ideal shape when young, will, when fully matured, have settled quite a good deal, carry its body nearer the ground, and it loses to quite a marked degree the fine shape it had when young.

A young bird that seems to be a trifle too high on its legs, somewhat rangy, and sometimes angular in outlines, often matures into an adult bird that settles down into a shape that closely conforms to the ideal.

As regards color and barring there is a wide difference between the young and old birds. In the young males the wing-bow feathering as well as the back and saddle, are of narrow feathers compared with the wider feathers of an adult bird. The barring also is finer and narrower when compared with the wider barring of the adult bird. When the young bird moults and gets its adult plumage, these feathers are wider, and carry a corresponding wider barring than they did on the plumage of the bird when young. We often see winning cockerels at our great shows, that have very narrow barring in these sections, and all comment on the beautiful narrow barring, but many do not know that this is because the bird is being shown in its chick feathers, and that when he becomes a cock he may have quite a different type of plumage. How many of the high winning cockerels do we ever see come back and win out as cocks? Very, very few. It is far more likely to be a late hatched cockerel that carried his small chick feathers thru the winter, and when he moulted and became a cock, his plumage is much like what we see on a well-matured early hatched cockerel; for the early hatched cockerel will have dropped more of his chick feathers, especially in wing-bow and saddle, than will the later hatched bird, that really does not mature till the following summer. These late hatched males often

First prize Light Sussex hen at Madison Square Garden, 1915-16; also first at Chicago Coliseum, 1915. Owned and exhibited by Houston & Hofus, South Charleston, Ohio.

moult in a narrow barred plumage of much brighter color than the earlier hatched ones do, and usually win out over them, tho really no better birds.

And with the females, the pullets naturally have quite a different plumage from what they will have when they moult and become hens. Standard color requirements for the female plumage call for the feathers to end in a dark tip. It is a mistake to require a pullet to have all of this perfection of plumage. The Standard should so read as to require the *adult* birds to have the plumage end in a dark tip, and modify this to a large extent in the pullet.

If we force Nature strongly we can get some of the pullets to show up the larger part of their feathers ending in a dark tip; but if we carry it to the extent that we get them closely to conform to our ideal in this respect, when the bird moults and becomes a hen the tipping is too wide or too dark in color, and the beauty of the surface color is lost, she has far too dark a color owing to the heavy tipping of the feathers. How many of the winning pullets do we see coming back and winning high as hens the next year? As with the cockerels we can say, very, very few. In their moult they have changed, many of them coming in too heavily tipped in plumage to present a pleasing appearance in the show room.

Many a pullet that showed but little of her plumage ending in dark tips, when she moulted acquired just the right tipping to be beautiful and a fine show specimen. If she had been

shown as a pullet she would have been turned down as not having sufficient quality in surface color to win. Such birds are very often our very best ones.

As a rule Nature does not clothe her young birds with the same type of plumage that she does the adult birds, and in the wild birds often the feathers are of quite different colors; so different that a novice would think them of a different species. Take our robin, the young bird does not have the full red color in the breast that is characteristic of the adult bird; it is speckled, and its true color does not appear until it becomes an adult bird. Those of us who are sportsmen and hunt the partridge will notice the wide difference in the perfection of the coloring of the adult cock partridge when compared with the plumage of a young bird. There is surely a difference in the plumage of young birds when compared with adult birds. And the Standard requirements for them should be specified. It is right here that the American Poultry Association could do some really helpful work. Let it get out a Standard that will be of some real help to the breeders. As it is now, it gives a description, more or less vague, of what an ideal bird should be. It tells the breeder nothing whatever to aid him to produce a bird to conform to Standard requirements. The ideal description of shape and color should so read as to imply to the adult birds, the cocks and hens, and a modified description be given for the young bird, or one that conforms to what they really are.

Sex Control in Poultry Breeding

CHAPTER I—A Discussion of the Theories of Sex Control.
By Herb E. Sharp, Spokane, Wash.

(Copyright, 1916, by Herb E. Sharp and Prince T. Woods.)

(NOTE—This is the beginning of a series of articles on sex control in poultry which we announced early in the Winter. Mr. Sharp has been experimenting with breeding to secure sex control for a number of years and since 1912 believes—says he "KNOWS"—he has at last succeeded in producing a line of Langshans that can be depended upon to produce 75 per cent pullets or better. The editor of *American Poultry Journal* has secured from Mr. Sharp three females and a male from this "Spok Anne, pullet producing, strain" and will test them out carefully, by trap nesting and pedigree hatching—the reports to be made later. We have also purchased two pens of Black Langshans and hatching eggs of the "Prince Ebony" Hewes' strain and eggs from the Robinson strain of winners, with the object of growing chicks from these alongside of the Sharp stock for purposes of comparison. We know that Herb E. Sharp is "sure" of his discovery, but we are entering this experimental trial with an entirely open mind and a desire to get first hand facts from our own observation for our readers. We now have an ample foundation stock in Black Langshans to make a careful experimental investigation of this matter and can carry the work along for a number of years if necessary. If any of the "Spok Anne" birds we have fail to produce 75 per cent pullets or better, Mr. Sharp guarantees to replace them with birds that will make good.—Editor A. P. J.)

AIRLY RELIABLE AUTHORITIES

state that there have been no less than 500 different theories advanced from time to time as the explanation of the peculiar phenomena observed in regard to the reproduction of the sexes, sometimes one sex and sometimes the other being produced. It is highly probable that, if one had time and inclination, it would not be a very difficult task to arrange them in groups or classes and we would find that they were mostly variations of perhaps a dozen or so really different

theories.

From my investigations there appear only five that really seem to merit careful consideration, tho there are many variations and degrees to be considered in some of these. And still, of these few theories, one is the direct and opposite result of another found from the apparent working of the same principle, and yet we have many able men firmly holding to both views, and neither side willing or able to present any real, definite and conclusive evidence.

In these articles it will be my purpose to present some of these theories with reports of certain experiments that apparently show definite and conclusive results, that seem to establish one theory and destroy all others; then to present in a rather technical paper—if a man who is not a technical man can present a technical paper—those physiological reasons that make possible the transmission and inheritance of the disposition to produce progeny that are more frequently of one sex than the other.

The closing article will be a careful presentation of certain well-known records, that tend to corroborate the results of experiments, conducted in the same field. While it may be impossible to present all of these records, that have come

into my possession, yet it may be possible to present sufficient evidence to convince any fair minded judge of the correctness of the theory advanced.

If one takes up this study with a prejudiced mind, do not expect to have all your prejudice, or ignorance, wiped away by the hand of one man—try a little experimenting on your own account.

One of the first theories that was brought to my attention was the one that holds, "Whichever parent is the stronger at the moment of conception will decide the sex of the progeny." Thus, if the sire be stronger in breeding powers than the dam, then the progeny will be a male, but if the dam be stronger than the sire then the progeny will be a female.

Many observers, who hold that a part of this theory is correct, claim to have found that if the sire is stronger, then the progeny will be female; while if the dam is stronger, then the progeny will be male.

Men of equally high standing in the scientific world have been found taking opposite views and defending their own views very strenuously, but mainly without any real tangible evidence upon which to base a conclusion, and it must be obvious that both sides cannot be right, and it may be possible for both to be wrong—and this we will show.

The second theory to attract our attention is the one that claims the age of the ovum, that is the length of time that it has remained in the uterus before fertilization takes place, is the factor that decides the sex of the progeny. It being claimed by some able men that if the fertilization occur at once, immediately after the passing of the ovum from the ovaries, that the progeny will be female; and if there is some appreciable delay before fertilization, then the progeny will be male. There are probably as many able scientists on one side as on the other, with an equal and formidable array of specious arguments, but seemingly a dearth of real

facts—and we will be able to show that both are in error.

Closely related to these theories is the one that deals with the alternating periods of heat; if the last calf was a male and the cow be mated at the first appearance of heat, the progeny will be a female; and if one season be passed then the progeny will be male. Again we have equally careful observers claiming that there is one period of heat that is not observable, after each freshening, and that this failure to observe the first period throws off all those who fail. It will be seen that this theory is based, like the others, more on opinions than facts.

Some of the very ablest writers have held that the sperm cells of the male are of two classes, one carrying the sex determinant that will produce a female, and the other carrying the sex determinant that will produce a male; and further asserting that the egg cell of the female, as it leaves the ovaries, carries no sex determinant at all, being in fact neutral. So that if no fertilization occur, then the cell disappears; but if the fertilization be accomplished by a sperm cell carrying a male sex determinant that the resultant progeny will be a male; while if the fertilization be accomplished by a sperm cell carrying a female sex determinant the progeny will be a female.

This principle probably comes a little closer to the real truth than any of the others, but when the female egg cell is considered as a neutral, and the sperm cell of the male is given the sex determinants, we have certainly gone wrong and reversed the real order of Nature, but let us prove it. And to prove it to the satisfaction of all concerned, let us be frank in the consideration of the claims of all these theories that we may be better able to apply the results of the experiments and better grasp the meaning of the different phenomena.

In a poultry show in the season of 1911-12 a discussion arose as to the relative value of narrow matings, and some one brought forward the objection that, "If one mated a good strong cockerel to only five or six hens, the chicks were sure to be all males." This declaration, so positively made, led to the inquiry as to results in different matings and it was stated that eighteen females to one male would produce mostly females, and twelve females to one male would produce about 50% of each sex.

It has also been claimed that cattle breeders, on western ranges have found that where there are only a few bulls, and those old ones, Nature, in an apparent effort to equalize the sexes, produces mostly males, while if there are several young bulls there will be in the progeny more females than males.

This is a direct contradiction of the former theory, yet it is equally shared and supported by some very eminent parties.

Having had a very close, and rather extensive, acquaintance with the men breeding cattle on the great ranges in the West, I am convinced that had any such phenomena existed, those same cattle men would have been the very last to have found it, or been able to trace to the source any particular cause; and further, if any such theory were true, no cattle breeder that ever lived could have lived long enough to have proven it.

Suppose a herd of a thousand cows all drop female calves when bred to a group of old and worn out bulls, and the next year the old bulls, having been replaced by younger ones, these same cows drop male calves—have they proved the theory? Perhaps so, to a western cattle man, but let us consider—the average cow drops a calf of one sex one year and the other the next year; so if we find an entire herd of even one thousand cows, all doing the same thing we have by no means set up conclusive proof of our theory, nor have we presented any indication that the change of sires has influenced the sex of the progeny.

It will require the life record of each and every female in the herd to show what the abilities of each individual may be.

If there is anything of real value in either form of this theory, it should be easily discovered, for in every large herd of registered cattle, where special attention is given to breeding fine stock, the sire is kept confined, by himself, and given the best of care, so that he is always in the best possible

condition physically and he is usually the strongest breeding animal on the place.

In most of these herds, at the present time, the cows are being urged to do their very best at the pail, and if not actually injured, they are certainly crowded close to the limits of endurance, for the sake of milk and butter records they may make. This high feeding cannot have a tendency to strengthen the female, so we have in all these herds, or nearly all, a strong sire and a weak dam—at least comparatively—and these conditions are so nearly uniform year after year, and these breeders so careful in their observations, that if this theory, or any other, had any bearing in either direction, the great majority of calves of the one sex would be so high that it certainly would have been brought to the attention of some of them before now.

The breeding of young heifers, and hard worked cows, to a strong and intensively bred sire, that is principally valued

for his great strength, could have but one result, if sex in the progeny followed the strong parent the calves would be *all males*; and if the sex of the progeny were to follow the sex of the weaker parent these calves would be *all females*, and the exceptions noted in a period of ten years' time, counting all cows in the herd would not approach 10 per cent. *No such case* has ever been brought to public notice, and if this theory were true, in either form, we would have thousands of cases, not alone of individuals, but cases of thousands of herds.

The age of the ovum has been said to control the sex of the progeny and the theory has been stated thus—if the female be paired as soon as her season begins the progeny will be female, but if she be held till near the close of her period the resultant progeny will be male. This has also been stated as having produced the opposite results, and the supporters of the theory may disagree as to which is correct, but they never seem to question the validity of the theory. If this theory were correct, then in those herds and flocks where the sire is allowed to run with the females all the time, the pairing would be reasonably certain to occur very close to the beginning of the season, and the resultant progeny would all be of whichever sex the law of Nature required, but they would practically be all of the same sex. Thus, if Nature had so arranged her plans that mating early

in the season would produce females, the progeny in these herds or flocks would all be females, year after year, and as no such result has ever been claimed we can readily pass the theory.

Great stress has been laid on the influence some observers

First Single Comb White Leghorn cock, Chicago Coliseum Show, 1915. Owned and exhibited by Frank E. Hering, South Bend, Ind.

have found by the alternating periods of heat, where one period produced a male, the alternate period is claimed, in some way, to produce a female. This theory was widely discussed and very ably defended as early as 1885, and though many breeders have attempted to secure some definite and satisfactory results, by counting the periods as they appear and also counting one period immediately after freshening, no one as yet has been able to present any definite results that would indicate the correctness of the theory. It would be highly improbable that any cow would go thru life dropping calves of one sex, and that her daughter should do approximately the same without being recorded and the presentation of an authentic record of a performance of this kind should be sufficient to disprove the theory, for in presenting such a piece of evidence we present a group of phenomena that cannot be explained.

When we consider the sperm cell of the male as carrying the sex determinant, we take up a question that it not so readily disposed of. Many men who watch their cattle closely have seen families that dropped very largely calves of one sex, and have been led to the conclusion that in some way sex tendencies were transmitted from parent to offspring.

We have all been taught that the sire is one-half the herd, and we naturally look to the sire first when any difficulty occurs in the progeny. Now if the sperm cell of the male carried the sex determinants, we would have little difficulty finding a male whose sex determinants present at the time of fertilization would be divided in the proportion of nine males to one female, and such a male would naturally be the sire of more males than females, and the trait would very likely be inherited by his progeny—especially would this be likely to occur where close breeding had been practiced. As this was closely and very generally practiced up till a comparatively short time ago, there should be no trouble now in finding such families, and in finding one such family we would find a family that would not average one calf in five a female, and such a sire would produce about as many heifers from one cow as another; we would have whole herds doing approximately the same thing, year after year. As no such

herd has been found where all the cows did, year after year, produce the same general proportion of the two sexes, some other influence must be found.

The fact that no sire has yet been reported that had a fair opportunity and failed to produce some female calves—yet if the sire controlled the sex of his progeny we should have many of them with such records, indeed if many families had not ceased to exist for lack of females—should be taken as conclusive evidence that there is some other influence in control.

Now we have the last, and the one that—while it is not new—is the one that is susceptible of conclusive proof—and in the pages to follow we propose to submit some well-known and definite facts that are incontrovertible that we hold support this theory, and under this theory we shall see that every possible condition is susceptible of a reasonable explanation.

The egg cells of the female are not neutral, but when they leave the ovaries they carry the sole sex determinants as much a part of their organization as they ever become. As the female carries the sex determinant, then she decides the sex of her progeny without regard to any other, or outside, influence at all. Hence some females go thru life bearing progeny all of one sex, or mostly of one sex, and very naturally transmit the same character to their daughters—as well as to their sons—who in turn pass it on to their daughters.

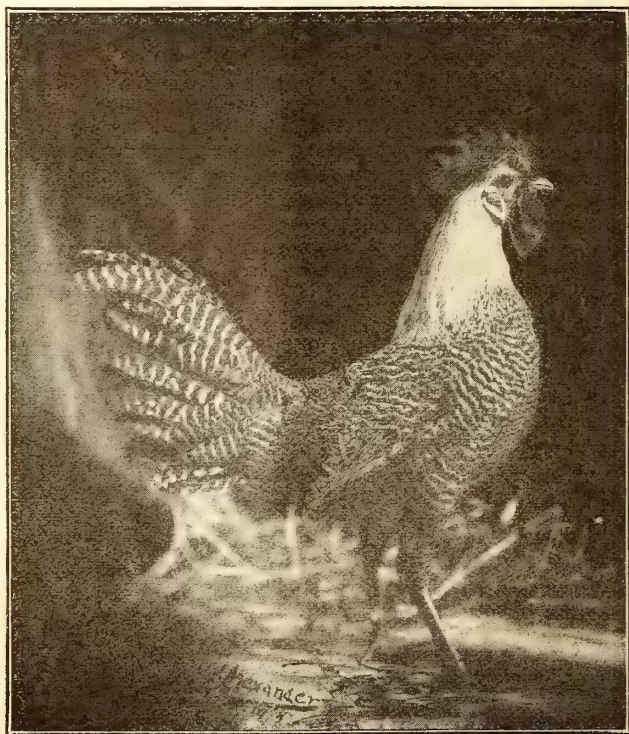

Such cows have been noted by many breeders, and it has also been a frequent occurrence for such a cow to have her record duplicated by her sisters, and by their daughters as well as her own.

Now any theory of sex control that will apply successfully to cattle must also apply to fowls, for Nature draws her laws uniformly for all alike and plays no favorites.

If it applies to cattle and fowls, it must then apply to all other forms of life, so long as conditions can be complied with; and, of course, where conditions cannot be complied with the results can hardly be expected. The principle that we hold has so far been found effective in plants as well as live stock.

The proof of the pudding is said to be in the eating, and no theory need be regarded long until there is some tangible evidence of its efficiency. It may be all right on paper, but let us see how it works in the barn yard.

(Next installment will discuss results of experiments.—Editor.)

Nationalism or Fraternalism! Which?

Comment on President Richards' San Francisco Address and An Appeal to Eliminate a Growing Element of Nationalism in An Organization Which Should Combine True Fraternalism and International Interests.

By W. Miller Higgs, Victoria, B. C.

President of the British Columbia Branch of the American Poultry Association.

(Note.—We hope that every thinking member of the American Poultry Association will read this appeal to reason by President W. Miller Higgs, of the B. C. Branch. The American Poultry Association is and should be international. We cannot afford to permit it to develop along the narrow lines of nationalism,—we should not allow any national spirit to creep in and antagonize our fellow members who live outside the boundaries of the United States. The interests of all poultry breeders of the whole North American Continent are common interests and all are concerned in the upbuilding of the poultry interests in All-America. In fact, if we develop our organization as it should be developed along truly live modern and broad lines for better American poultry and more of it, we should eventually make our organization as nearly Pan-American as possible, not only North America but All-America. The trend of progress is away from narrow nationalism. There is no nationalism in education, science, medicine, surgery,—knowledge, art, healing, service, and helpfulness to humanity are for all people everywhere. It may not be practicable to extend our American Poultry Association at the present time beyond the boundaries of this continent, but it should be more truly international in character and it should, at least, be very careful to preserve and promote a strong bond of fraternalism among poultrymen thruout the North American Continent. The Canadian Maple Leaf on the insignia of our American Poultry Association means something—means a great deal—and it should mean a great deal more. The maps and the customs departments indicate a dividing line between the United States and Canada, we know that a boundary line divides our separate governments, but a poultryman from the States traveling in Canada or a Canadian poultryman in the United States does not find any dividing line in the fraternal bond between poultrymen, we are the same kind of human beings, with much the same interests, the same lines of blood in the ancestry of most of us, and in matters concerning the uplift and progress of our common poultry interests we ought to stick together. We feel very strongly on this subject. We appreciate the good work that is being done by the Canadian Department of Agriculture, as we also appreciate and take pride in the work of our own State and National Governments for agricultural and poultry progress. There should not be any more sectional or national feeling between American Poultry Association members in Canada and the United States than there is among the member of our several States. Let's get together and try to think broadminded thoughts and do helpful work for the poultry breeders of All-America.—Editor, American Poultry Journal.)

ROTHER MEMBERS of our A. P. A., in every state and in every province of the North American Continent where a branch organization of our great American Poultry Association exists, I ask your careful and very thoughtful consideration of the subject upon which I have felt bound to write, as it is one of *vital* importance at the present time.

The Quarterly Bulletin (January, 1916) is no doubt by this time in the hands of every member, and we are all familiar with what was done in connection with

the fortieth annual convention. Our President Richards' address is before us all. He is anxious as any of us for progress, but in order that our association may expand and we may be enabled to co-operate with him to this end there are certain matters which must be made clear, and his address to the convention at Frisco emphasizes this fact.

The subject assigned to him for his address was: "The History and Possibilities of the American Poultry Association." In opening his address he said: "The historical part of the association I am going to eliminate, because I see we have an attendance of live ones, and Mr. Lively has informed us that this is an exposition of modern ideas and I am simply going to take the latter part of my text, the Possibilities of the American Poultry Association."

Now, Brother Members, by our leader cutting his "text" in two and only dealing with the latter half, I venture to believe, and I also feel that many will agree with me, that Mr. Richards has inadvertently made a serious mistake. The real meaning of the "text" has been lost, and many new members may be entirely misled by his address upon the great work of the American Poultry Association. It is *impossible* to eliminate "The History" of the association without losing the very character of this great organization, and it is this which has led me to take a somewhat strange subject upon which to write to all our fraternity.

For "forty years" the American Poultry Association has been attempting to promote "the poultry industry of America." What do we understand by this? Do we understand that the association has been working for the upbuilding of a great organization as a United States institution, or as a great association of poultrymen on the continent of North America—which? It would seem from our president's address that he holds the former view, but if we remember the history of the organization we know that the word "America" means the continent of North America. Brother Members, the very name of our association has come to be misleading to many. Many forget that our emblem is composed of the Stars and Stripes surmounted, or charged with the Maple Leaf of the Canadian section of this continent, with the wish bone of goodwill, which in itself very clearly denotes the character of the A. P. A. and it is because we are a

body of "live ones" that we regret that our president has omitted to deal with the history of our association.

We are an organization of live poultrymen, whose one aim should be the furtherance of the breeding of better stock on the North American continent, and if we are to progress upon the old lines upon which our association was founded we cannot allow "Nationalism" to have any place.

If the feeling of the majority of our members is that the A. P. A. shall be national in character, then in all consistency remove the Canadian emblem, for unless we are to hold together as a great fraternal institution of poultrymen, irrespective of nationality, with equal rights, representation and privileges, we had far better work separately under our own national emblems. But, is there need for such a break? Is there any sane reason for bringing a national spirit into so old an organization which has done so much in building up a great continental industry? However, to my way of thinking there is a pressing need at the present time to make the true character and history of our association known and should it be thought wise in order to maintain and emphasize its old character to make some change in the name such as "The North American Poultry Association" or "The American Continental Poultry Association" let us do so. I am personally strongly against any such change as "The American-Canadian Poultry Association," a name which I have heard rumored, as that at once brings into it national feeling which will work more harm than good.

We cannot get away from the fact that there is among us a good deal of the national element—which is not a "modern idea." But for the misunderstanding of the very name of the association there would be a far larger Canadian membership. Again and again Canadian poultrymen have raised this point with me. Time after time have I endeavored to explain the true character of the A. P. A., both personally and thru the poultry press, and unless some action is taken soon to safeguard the interests of the organization by making this point definitely clear to all, nothing can prevent a quite unnecessary break. Our president by his address, tho no doubt quite unintentionally, only emphasized the national spirit and deterred membership from hundreds—yea thousands—of poultrymen in Canada. He freely speaks of the United States Department of Agriculture, but the Department of Agriculture of the Dominion of Canada, which has done and is doing a great work for the poultry industry, is not mentioned. Then there is the question of the text-book for use in all our schools, the importance of which cannot be too strongly emphasized in order that our younger generation may become familiar with the rudiments of poultry knowledge. This text-book, however, cannot expect to be received by both the Educational Departments of the United States and the Dominion unless it is drawn up and put forward in a diplomatic manner as from an association of all the leading poultrymen in North America without any national character.

I entirely agree with our president when he says: "If there is anything to be done to elevate this industry it lies in the hands of this association; it lies in the hands of the officers and members of the association." And as it is my privilege to be now serving the B. C. branch for my third term of office as its president, I feel that a very serious responsibility rests upon me, as well as upon all other state and provincial presidents, and all members alike of our great organization to do all in our power to further the good work of the A. P. A. and to point out the absolute necessity at the present time for organization upon a broad and fraternal basis and a cutting out of any national feeling which undoubtedly has crept in and which is barring the way for

advancement. I feel sure that President Richards himself, when he reviews the former part of his "text," will see how we cannot eliminate the history of our association without losing much and will see how his address for advancement may be misunderstood by many poultrymen in Canada, and instead of encouraging their support and co-operation it will probably have the opposite effect. I also feel that he will, with all other state and provincial officers, be willing to do all that is possible to maintain the very foundation of the A. P. A.—namely a great fraternal organization of poultrymen on the whole continent of North America for the good of our great poultry industry, and thus save any possibility of a serious break upon *narrow national lines*.

How to Breed R. C. W. Leghorns and Why

First Prize Article Winning the Trio of "Beauty and Business" Rose Comb White Leghorns Given by M. C. Wilson, Oil City, Pa. *By Walter T. Mattinson, Glace Bay, N. S.*

THE MEN WHO have been and are developing the R. C. W. Leghorn, have Avoided the mistakes of their predecessors with older breeds who have developed exhibition birds that were good for nothing else, or "bred to lay" birds that were no good in an exhibition coop; and have kept constantly before them the ideal of a breed of fowls that would fill the requirements of the standard as well as the utility qualities required to make a breed a success.

Those who have been most successful in breeding R. C. W. Leghorns have practiced "line breeding," which is now generally recognized as the proper method. The first essential in this is to have a good strain of birds for foundation stock. When possible, two-year-old hens should be mated to a well-matured cockerel, altho good results can be obtained by using well-developed pullets. One of the advantages of using hens is that the egg record for their pullet year may be taken into consideration in choosing the breeders, but they should also approach as nearly to the Standard of Perfection as possible and, more important still, be strong, healthy birds which have never had any constitutional weakness and have matured quickly. Pay particular attention to type and general conformation in both male and female, choosing a male that is exceptionally strong on points that the females may be weak on.

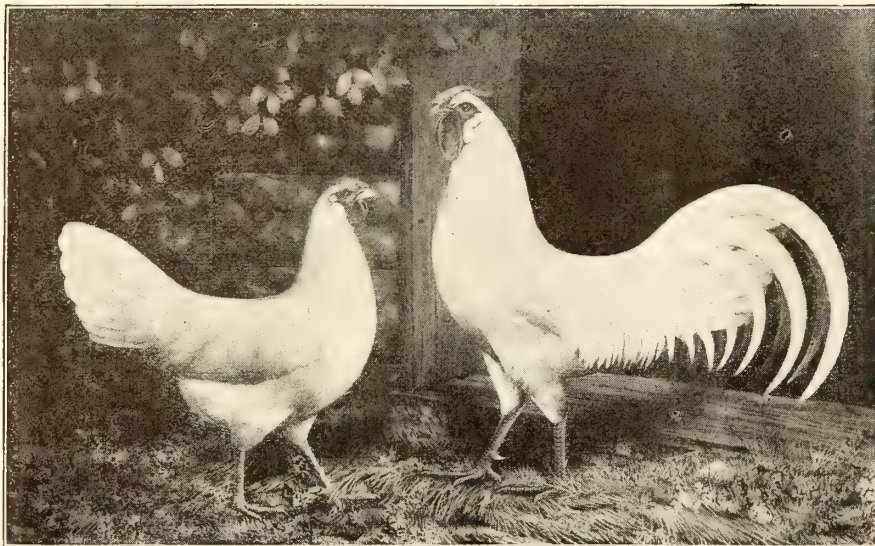

The head should be small and neat with bright red eyes, which indicates strength and breeding quality, and a nice standard comb which will never be touched by frost if kept low and firm on the head, as required. The tendency in this connection is to breed for large combs which develop into "lops" and spoil the beauty as well as catch cold. Feed the birds for health, not egg production. If they are kept in good condition they will not only shell out the eggs but the eggs will hatch. Feed grain twice a day raked into a deep litter. Keep a dry mash before them all the time. Meat should be fed in some form, but sparingly, and fresh water, charcoal, grit and oyster shells should

be always accessible. If the birds are confined, feed green food five or six times a week. Alfalfa, sprouted oats and cabbage are all good. A wet mash may be fed twice a week, but is not essential. House the breeders in bright, well-ventilated quarters with a southern exposure, allowing about four square feet of floor space per bird, with a dust bath for exercise in cold and stormy weather. The southern side of building should be at least one-third cotton, so arranged that it can be opened in fine weather and another third glass, put in low down so as to supply plenty of light on the floor. As much yard room as possible should be given. If the birds are kept under these conditions, twelve females mated to one male will give nearly 100% fertility and hatch chicks that will live and grow.

Chicks hatched and brooded by hens are stronger than incubator hatched chicks, and for this reason it is advisable, where possible, to use hens. The incubation will have to be done by one of the sitting breeds as the R. C. W. Leghorn believes in egg production and has no time to sit around. Chicks intended for breeders should be hatched in April or May, as the vitality is strongest in those months, but those intended for egg production may be hatched at any time in the year and, with reasonable care, will lay at five or five and a half months, whether Summer or Winter. The chicks will thrive well on range, but also do well in close confinement if supplied with green food and for this reason are especially suitable for town lots.

A flock of Rose Comb White Leghorns, with their beautiful white plumage, bright red combs and graceful carriage, will attract the admiration of all beauty lovers whether seen on a lawn or in the exhibition coop, but their beauty, altho unsurpassed by any other breed or variety, is only one of

their many claims to popularity. The pullets develop very rapidly and start laying any time after five months, many individuals laying younger, with the result that the R. C. W. Leghorn pullet has usually paid for her rearing and has a bank account to her credit before the majority of other breeds have started to pay their board. When the "cold snaps" come and the thermometer drops out of sight the little Rose Comb keeps right on singing

An ideal pair of Rose Comb White Leghorns.

and working. You have your fresh eggs for breakfast while your neighbor is losing his breakfast to get his Single Comb variety thawed out. The cockerels develop very rapidly for the first ten or twelve weeks and can be disposed of at a good price for broilers, or if you do not fancy this method of disposing of them, give them to the cook and she will turn you out a dish that will equal any fowl you have ever tasted.

To sum up. The Rose Comb White Leghorn is one of the most beautiful varieties of domestic fowl, is very easy to breed, is a non-setter, has a strong constitution and will live and lay under almost any conditions. Develops and lays younger than almost any other breed, and also keeps on laying thru all weather. The eggs are very large for a small breed and will compare favorably with those of the heavier breeds. The cockerels and surplus hens make a tasty dish for the table. They can be bred successfully in a small enclosure and, last but not least, their board bill is at least 20% cheaper than for any of the larger varieties. A combination that beats anything in existence for maximum poultry efficiency at minimum cost.

Type Should Be the Main Consideration—Winner of Second Prize, a Pair of R. C. W. Leghorns Given by M. C. Wilson. By Lawton B. Quimby, Laconia, N. H.

IN STARTING TO BUILD UP an exhibition-business strain of R. C. White Leghorns, do not get too many birds in the breeding pen. Many people believe that they must have twenty-five or thirty females in each pen. This is not so. In fact, better results are obtained if only three or four birds are used. In this way you become acquainted with each bird and thus study its points more carefully. One hen will lay an average of about 80 eggs during the hatching season and by incubating all these a very good

start can be made with a few fowls.

In selecting breeding birds there are three main points to be considered—shape, color and comb. It is understood that any bird to be put in a breeding pen must be in perfect health and condition for it is nothing but a waste of time to breed from diseased stock. But taking the three other considerations, it will be found hard to get them all in one bird in any variety.

Select a male with as good typical shape as possible, a large well spread tail, carried at a low angle; a bird with a good comb, one that is not lopped to the side or with a crooked spike. The comb should be even and square on the head and fairly small. Select a bird well up on yellow legs and of good Leghorn type. This is most important for tho your birds be purest white and have perfect heads, they cannot win without good shape.

Select females of large size; nice neat, well-shaped combs, not too large. Pick long bodied females, for upon this depends your ability to get the beautiful, low tail so much admired in the male bird. Select only such females as are active and vigorous, since good results cannot be obtained unless the birds are in the pink of condition—and always have been.

Trap nests are important in establishing quality in a flock. First because thru their use you may determine the eggs from each hen and mark her descendants. If she fails to come up to your expectations one season, you are able to discard her or if on the other hand she has made good, you know she should be retained in the breeding pen. Second, the trap nest is the only sure way of knowing the number of eggs laid by individual hens.

A few reasons why I breed R. C. White Leghorns are as follows:

Their eggs are of a fair size and are chalk white, such as are demanded by a good percentage of the people.

They are noted for their great egg laying ability. A R. C. White Leghorn won the National Egg Laying Contest in the year ending December, 1914, with a record of 260 eggs. Most egg farms are boosters of the Leghorn.

At the period of the year when most breeds are busy with their broods the Leghorns are busy laying eggs.

It takes five or six square feet per hen for larger breeds where a Leghorn requires but two and one-half feet. This is important when the cost of buildings is considered.

Two Leghorns may be kept on the same amount of food required by some of the larger breeds and at the end of their productiveness the two Leghorns will weigh as much as the larger bird and will have produced three times as many eggs. This is an important consideration when food bills are to be paid.

The pullets begin laying early, many at four months and most of them by five months. By this the Leghorn gains on extra eggs when prices are highest.

The low comb is non-freezing. This is a great advantage when we consider the amount of time it requires to treat frozen combs. A hen will not lay much when she has a frozen comb.

The cockerels mature early, selling at top prices when weighing one pound to one and one-half pounds. At this period the flesh is very tender, and the bird is not all bone, as are some of the heavier breeds.

Their white plumage is most beautiful and when the birds are dressed there are no dark pin feathers to disfigure the perfection of the dressed carcass.

Their yellow skin is preferred by all the markets in this country, thus giving them an advantage over white fleshed varieties. They are growing daily in popularity and have advanced strictly on their merits and will continue to do so.

They are always active and hardy. When not scratching for a living they are filling the nests.

There is no more beautiful sight than a fine flock of Rose Comb White Leghorns out on a good grassy range early in the morning. The graceful alert males, with their low well-spread tails, low combs and snow white plumage, with the trim active beautiful females following their mate about.

Considering all these reasons for selecting this desirable variety, I think many will agree with me in saying that no other fowl approaches them in their all around combination of fine qualities and advantages.

Geo. N. Barstow of Oneonta, N. Y., is rapidly forging to the front as one of the leading Eastern Ancona breeders. His birds made a fine winning at the Palace Show, Syracuse, N. Y., and at Allentown, Pa.

The Hatching Season of the Fancier

This Covers a Period from January 1st to September 15th. Successful Breeders Differ As to the Best Month. *By Chas. A. Simmonds*

THE MAJORITY OF POULTRYMEN prefer to hatch their chicks in March, April and May. This is because chicks hatched during these months can be raised with the least labor and expense and will stand neglect better than those hatched earlier or later. While for the utility breeder such an excuse is sufficient, it is very different with the fancier whose object is to improve his strain by selection and pedigree breeding. He finds his goal will be much easier reached if he can extend his hatching season and

produce chicks that will develop into prize winners from six to nine months instead of only three. The principal advantage one gains by extending his hatching season lies in more closely culling his breeding stock. The breeder who hatches from eight pens in three months can hatch an equal number of chicks from four pens in six months, which would require but half the number of breeding birds, and they being the best would mean a corresponding increase in the average quality of the chicks raised.

Of course the reader may be one of those who claims to have reduced the mating question to such a fine art that he never produces any culls, nor any birds he can afford to sell for less than \$5 (as some breeders advertise).

Supposing this to be the case, I shall ask you to imagine yourself looking over the class in any popular variety at the Chicago or Madison Square shows. Here is a class of fifty pullets, the cream of the continent, the best birds selected from the best flock of the variety, the greatest production of the most skillful breeders, finished products of their art. And now comes the judge to cull this great string of pullets

and select the winner. Slowly he walks down the aisle, giving each bird one, two, or three marks for shape and color or crossing out those he considers unworthy of further consideration. At last he has the class culled down to five or six birds. These he examines very closely, considering all the minor points to ascertain their proper placing.

It may be that some breeder has been able to produce a wonderful pullet several years in advance of the breed's progress towards perfection. More likely the first and second prize winners are very close in quality, and it is often some minor point, such as a wrinkle in the wattle or a speck of color in the ear lobe, that decides the winner. But eventually the judge must cull the class down to one bird, the blue ribbon winner. And thus must the breeder, who is a successful breeder of his variety, be able to cull his flock to the one best bird. Such breeders recognize the value of extending the hatching season and hatching only from their very best birds but are often prevented from doing so because they are unsuccessful in rearing the chicks hatched out of the natural season.

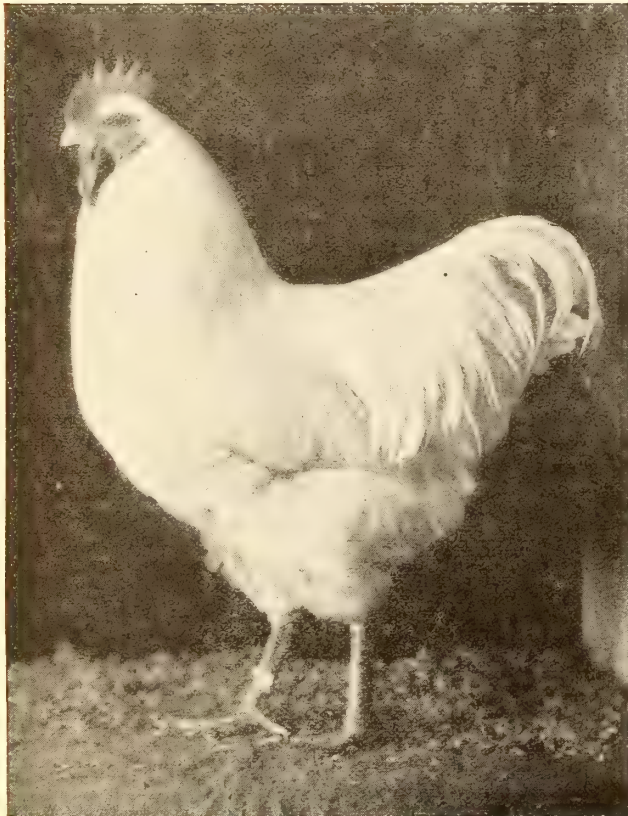

Successful breeders do not agree as to the best months for hatching, nor the best system of brooding natural or artificial. I know that ideal weather conditions are a great help, but have never been able to determine the best month for hatching in advance as here in Central Illinois we frequently have April weather in February and February weather in April. I have found, however, that if I suit the feed and care to the system of brooding (natural or artificial) and the season and weather conditions, I can raise fine birds in most any month. The system of feeding chicks that is best for those brooded by hens and given free range is not at all suited for those brooded by artificial means and confined. Chicks hatched in the natural season can secure large quantities of insects, worms and tender sprouts of weeds and grass, and unless the early chicks are supplied with substitutes they cannot be expected to make satisfactory growth. Lean meat, milk and eggs make good substitutes for insects, while the tops of sprouted oats, lettuce, raw potatoes or apples are all excellent green food. Both animal and green food should be fed once a day.

For hatching my best eggs and brooding the chicks I always use hens when obtainable, not because there is any noticeable difference in the quality of the chicks raised, but the natural method, if a little thought and system is used, is a labor saver. Any number of hens can be set in the same house at the same time and require less care than an incubator. When the chicks hatch each hen can brood about half the number that should be put in any make of brooder, and one has no lamps to care for or thermometers to watch.

Whether they are raised with hens or brooders, chicks hatched before April should be either brooded indoors or have a good sized exercising coop attached to their brood coop or brooder. For a brood coop for early brooding I prefer what I call an adaptable coop, because it can be used for every purpose for which a coop is wanted, a brood coop for a hen and chicks, a roosting coop for half-grown chicks, or a "cockerel coop" for surplus males.

These coops are 6 ft. long 3½ ft. wide, 3 ft. high in front and 2½ ft. high at the back. The roof projects 16 in. over the front, half of which can be closed by a solid board door, other half is left entirely open. When used as a brood coop the door is fastened shut and a lathe frame used to confine the hen to this closed side. There is a solid board floor in the coop, and when used as a cockerel coop a frame 3x6 ft. with board sides and wire top is used in front of the coop. This is also useful in protecting the chicks from the wind at times.

The feed given early chicks the first week may be the same as for chicks hatched at all seasons. The first few days a chick needs warmth more than anything else. The feed used at this time should be easily and quickly digested,

and had best be moist, as some chicks are a little backward about learning to drink, especially brooder chicks.

Nothing is better than bread and milk for the first feed. I consider oats in some form the best grain for feeding fowls of all ages, and after chicks are two days old, feed rolled oats, alternately with the bread and milk.

Exercise is necessary for proper growth, not only does it aid in digestion and assimilation but helps to keep the chicks' contented when in confinement, which is very important. To induce chicks to exercise I scatter grain in the litter, also feed them pieces of apple or raw potato.

After the first week I never give more than one feeding a day of mash or soft feed. This is first bread and milk. Later I add rolled oats, bran, middlings and corn meal, also a little fresh meat boiled and run thru a food chopper, or a little hard boiled egg. This mash I give as early in the

flaked oatmeal, twenty-four parts hominy dampened with fresh whole milk.

This ration originated with Chas. Hubbard, manager of Foxhurst Farm, and has since been adopted by several other leading breeders.

As this mixture contains both mash and grain feeds, it needs only to be fed three times a day. Much of the prepared chick feed on the market is composed of mouldy or heated grains, especially corn. The hominy and rolled oats being made for human food are made from the very best grain, so there is no danger of this mixture causing bowel trouble or of the chicks being poisoned.

I buy the rolled oats in 90-lb. bags. They are made by the Quaker Oats Co. and cost \$2.90 per bag, if bought from a wholesale grocery house. Some breeders feed this mash to the chicks till they are six weeks old. But I only use it the first four weeks, and then begin feeding from the Norwich Automatic Feeder. This grain mixture I feed the chicks from four to six weeks is equal parts rolled oats, cracked wheat and cracked corn. After six weeks I change to coarser cracked corn and whole wheat, adding whole oats when chicks weigh about three pounds each and gradually increase it as they will eat it.

Before I begin using the Automatic Feeder for feeding the grain I teach the chicks to eat a good dry mash. I consider Blatchford's milk mash the best dry mash that can be fed to small chicks. I use it from the fourth week until the chicks weigh about three pounds, then gradually change to a mixture of three measures bran, one measure each of corn meal, middlings, ground oats, beef scraps, a little oil meal, charcoal and salt.

While some very successful breeders use either dry or wet mash exclusively, the majority are now using both. Some time ago Mr. Stoddard, of Texas, in one of his writings for this paper, claimed that his birds would not eat nearly enough mash if fed dry, he finding it best to keep whole grains and wet mash before his birds in boxes where they could eat all of either they desired. Concerning which Dr. Woods wrote that he believed Mr. Stoddard's failure to induce his birds to eat enough of the dry mash was due to the excessively dry, hot climate of Southern Texas, as his own fowls (in Massachusetts) would generally eat a sufficient amount of dry mash. I have since found by experience that this theory of the doctor's is correct and worthy of the consideration of everyone who would feed their birds for best results in all weather conditions. During dry or warm weather the appetite of the fowls is never so good as when the weather is damp and this seems to be especially true of their appetite for dry mash.

During the Summers of 1913 and 1914 I fed my growing chicks a damp mash every morning and also gave sprouted oats at noon, as the grass was so dry it was little better than hay. Last Summer was a great contrast and there were many weeks during which my chicks did not receive any but dry feed, yet their appetites were better and they made more rapid growth than the chicks of the two seasons before. When chicks can secure a large number of worms and insects as well as fresh, succulent clover and grasses they do not need a mash of any kind. When the weather is so dry that the range does not supply these things, damp mash and sprouted oats or rape grown under irrigation must be supplied.

I use bread and milk for small chicks and boiled barley as they get older, drying these off with rolled oats and the dry mash mixture. If beef scraps are used in the dry mash during the warm weather only a little should be mixed at a time, as the mixture spoils much more quickly than any of the separate ingredients. A safer rule is to scald the beef scraps and feed in the damp mash.

It would not be necessary to keep a dry mash before the chicks while feeding the damp mash, but by doing so I find I have no trouble in getting the fowls to eat plenty of it when I discontinue the damp mash. After the first of October I discontinue feeding wet mash (except in small quantities once or twice a week as a change of diet), as I believe they result in more harm to the birds than good when fed during the damp cool weather of autumn.

While it will not pay to hatch a large number of chicks

morning as it is light, and the last feeding of grain just early enough to give the chicks time to clean it up before dark.

Early chicks should be fed four or five times a day at regular intervals.

After the first week I use a mixture of equal parts, rolled oats, cracked wheat and cracked corn. This is scattered in the litter till the chicks are four weeks old, then I always use an automatic feeder for feeding the grain ration, which at this age is the same at all seasons.

Chicks hatched after April 1st I coop on free range, giving each hen about 15 chicks in a coop not less than two feet square.

The worst thing you can do to chicks is to crowd them. Fifteen chicks to the hen or 35 to each outdoor brooder is enough for any season.

I always place the brood coops about 30 ft. apart the closest way. This eliminates trouble with broods mixing and gives each brood a chance to secure plenty of insects. In selecting a range for the chicks I give preference to a field of short grass on one side of the coops and a cultivated field on the other side. During warm weather I always place the coops in the shade.

The best ration I ever used for chicks brooded with hens and running on free range is the following: Three parts bran, two parts middlings, one part rice flour, twelve parts

in any month later than May, the fact remains that many prize winners have been hatched in all months from May to October. If one desires to hatch in August and September the breeding pens should be broken up and the best birds remated later, giving preference to the hens that went broody and reared early chicks. These late matings should be given fresh yards with outdoor roosts. As soon as the females return to laying nearly all the eggs will hatch strong chicks, which will make very rapid growth during the ideal weather of September. If you will keep these late hatched chicks away from the older birds and give them good care thru the Winter months you will find them excellent show birds and breeders the second season after hatching. Failure with late hatched chicks is generally due to one of three causes—either lack of fresh range apart from the older fowls, crowding in the coops at night or permitting them to become lousy. Every hen hatched chick has lice. As soon as hatched they should each have a drop of olive oil rubbed on their heads. Later put a handful of Persian insect powder in a sack, put in the chick and shake it up. The powder will work in thru the feathers and will not injure the chick. After the chicks weigh about three pounds you can use any good ointment, such as Licene.

Pullets to be in best condition for exhibition should be shown when just ready to begin laying. Early hatched pullets will often begin laying before sufficiently mature. If not hatched too early this may be prevented by moving them frequently and feeding no meat food or damp mash of any kind as they near maturity. The best way to use the early hatched pullets is in a utility pen, from which you desire to obtain a goodly number of broody hens during each of the Winter months.

For showing at the same show the cockerels should be a month or two earlier than the pullets. In fact the older a

cockerel is the better, if one has been careful to so feed him that after he is thru making frame he will grow the flesh and feathers necessary to give correct symmetry and still keep his comb where it belongs. Stimulating and heating foods such as meat and corn have a tendency to make the combs too large. A little bread and milk in the morning with plenty of green food and grain (mostly oats and wheat) makes a safe ration for conditioning mature males which are unmated. If our early cockerel is mated his comb can easily be kept of the proper size, but he will loose in breast shape and symmetry. When the cockerels weigh about three pounds each they should be separated from the pullets. If the sexes are kept separate after this age both will make more rapid growth, the cockerels especially grow better and can be kept together longer without fighting.

At a meeting held at the Roycroft chapel in East Aurora, N. Y., one evening early in October, a Bureau of Poultry Husbandry was formed with a charter membership of twenty-two. The bureau is to be operated under the instruction of R. S. Moseley, a Cornell graduate, who will consult with and advise the members, visiting each farm at least once each month. This is the first bureau to be formed in New York state, and, if successful, several others in various localities will be organized, all to be operated under the Cornell University management, with a local instructor.

Springfield, Mo., has become one of the greatest poultry shipping centers in the entire country. For the year ending June 30, 1915, a total of approximately 2,570,000 head of poultry were shipped out of that city. The shipments included 226 cars of live poultry and 160 cars of dressed poultry, with from 6,000 to 7,000 birds to the car.

AMERICAN POULTRY JOURNAL is the oldest poultry paper in America. It has a national and world-wide reputation. The best writers on poultry matters contribute to its columns. It receives the patronage and endorsement of the foremost representative breeders of standard poultry and manufacturers of poultry appliances in the country.

YOUR SUCCESS with poultry, or in any calling, depends largely upon yourself. Your success will be in proportion to the amount of study and intelligent observation you give to your subject, your application to the work and your concentration of your ability and skill in the perfection of that work. You may profit from the experience of

others, but the chances are that you WILL PAY FOR YOUR OWN EXPERIENCE because you, like others, will learn your lessons chiefly thru personal experience.

It takes study, thought, experience, skill and hard work to make a success in breeding Standardbred poultry. None of our breeds and varieties are so well fixed in type and quality that one can make a success of breeding them except thru close application of these requisites. You can buy the best mated breeding pen ever produced and the best and highest priced hatching eggs, but unless you put study, thought, experience, skill and hard work into the care and management of the breeders and of the growing chicks, your flock in a short time will degenerate into a lot of culls and mongrels.

When you buy high-class stock or eggs for hatching you do not buy the specialist's experience and skill. You have a great deal to learn before you can become a successful breeder. Intelligence, experience and skill in handling the stock is absolutely necessary in order to make a success with it. The sooner you get that thoroly into your system the sooner you will be able to get started right. You cannot expect to learn in a few short seasons what it has taken a specialist almost a lifetime to learn, but you can, by study, application and hard work,

profit immensely by the experience and knowledge of that specialist, his teachings and those of others working along similar lines. Simply buying the best stock or eggs is not alone sufficient to get you started right, your success depends upon yourself,—upon your own individual effort.

In February, learning of some Standardbred stock for sale, we visited the customer of a fancier friend of ours. We know that the fancier has stock of splendid quality and that he sells good value in stock and eggs. His flocks are line bred. He wins his share of the blue ribbons at the leading shows. In his variety he has as good Standardbred quality as we know of in the East. Now this customer of his is a young man with very limited knowledge of poultry and ignorant of the requisites of breeding and growing Standardbred poultry. He is a hard enough worker, but he has not had sufficient experience to profit by it, he has not studied his subject sufficiently,—in short, he is just the average type of young man interested in poultry—a fondness for fancy fowls, but with everything to learn. Three or four years ago he bought hatching eggs of the fancier at \$5 per sitting and he has been a "good customer" for hatching eggs ever since. Yet he is still a "new beginner" and not a bit further advanced than he was before he bought his first lot of eggs. We looked thru his flock and we were unable to find a bird that we were willing to buy and not a single specimen did we see that was worth over 16 cents a pound.

The birds showed unmistakably that they had been bred from good parent stock, certain ineffaceable characteristics gave evidence that here was good stock gone wrong, even if we had not had per-

sonal knowledge that the parent stock in the fancier's yards was all right. Yet THESE BIRDS WERE RUINED IN THE GROWING.

Nearly every specimen in this "new beginner's" flock was undersized, most of them had crooked breasts or some other deformity. The birds were not sick and quality showed in their eyes, but their bodies and plumage gave unimpeachable evidence of malnutrition, crowding, poor management and general unfitness during the growing period. Most of them had scaly legs. The plumage was more or less off in color and such sheen as there was on the surface was broken and mixed. A pedigree stud book might give these birds a clean record of blood lines, for they are as pure in blood as any stock in the fancier's yards, yet these defective specimens have been ruined in the growing and are worthless as breeding stock.

This "new beginner" has a Standard of Perfection, but it does not tell him anything about breeding his variety or how to grow chicks so that they will develop properly. He is a hard working young man and he has spent a good many hard earned dollars to get a start with Standardbred poultry, but he did not know what to do with the stock when he obtained it, has not learned how to grow chicks properly and no one, until now, has ever explained to him the importance of growing chicks right. He, with many others like him, expected to buy ready-made quality when he bought eggs at \$5 per thirteen. In his ignorance he did not know that such quality as might be found in those hatching eggs MUST BE DEVELOPED by the person who hatched the eggs and grew the chickens. For the past few years he has been spending his money, groping in the dark and growing only nondescript stock from high-quality fancy-bred eggs. We hope that this editorial will open the eyes of other "new beginners" and cause them to think, study, and work for success.

CAN YOU SPROUT the oats you buy for poultry feeding? If the oats will not sprout, it is a pretty good reason for refusing to buy more of the same sort. Put the oats to the sprouting test.

During the past few months we have had a good many complaints about feed oats that would not sprout. We believe that, in most cases, such oats have

been adulterated by the sulphur bleaching process.

A large proportion of last season's oat crop, owing to unusual weather conditions, suffered damage thru weather-stain or soil-stain. Some were of decidedly inferior quality and some damaged by mould or fermentation. It has been stated that because of the wet season the average moisture content of oats and barley was abnormally high. However, it is probable that this statement about moisture content has been made use of to endeavor to explain actual adulteration of oats thru added water in "processed" oats, which plumped the grain and added to the weight.

Grains which have been treated with sulphur fumes in order to bleach them, do not sprout because the bleaching process has very seriously impaired or destroyed their germinating properties.

It is claimed that the bleaching process is resorted to for the purpose of improving the appearance of grain which is weather-stained but the quality in other respects uninjured. It has not yet been shown

positively whether or not such sulphur-bleached grain is injurious to animals.

Investigations by the United States Department of Agriculture show that "the bleaching of oats which are mouldy, partly fermented, or otherwise damaged, serves to conceal damage or inferiority. Damaged oats and oats of inferior quality which have been bleached or otherwise treated so as to make them resemble those of higher grade or quality, in the opinion of the department, are adulterated within the meaning of the Federal Food and Drugs Act. It is uncontroverted that moisture is added to oats in the process of bleaching with sulphur dioxide. Oats which contain added moisture, in the opinion of the department, are also adulterated. The shipment in interstate commerce of oats which are adulterated on account of either treatment whereby damage or inferiority is concealed or by the presence of added water is prohibited by the act."

An export shipment of oats has been reported as condemned because of added water, which adulteration gave the oats a plump and full appearance and added to their weight, but the oats spoiled quickly and were found unfit for feed purposes.

Good sound oats are valuable food for chicks and fowls of all ages. Damaged oats are unfit for poultry feeding. It is quite probable that bleached oats will be found to be injurious. Insist on your dealer delivering good sound wholesome feed oats that are naturally plump and heavy. Test them by sprouting a sample. Do not accept bleached oats or those which show any trace of mould or mustiness.

AFTER READING "An Open Letter to Poultry Journal Editors," including a report of preliminary meetings of the American Poultry Association standing committee on Standards, an outline of what the forthcoming breed standards will contain, and the urgent general call for help in the form of suggestions and valuable data, by Grant M. Curtis, one cannot help wondering if history is about to repeat itself. Mr. Curtis is once more in control of the work of preparing standard matter and also of the collection of valuable data for the new breed standards about to be made and published.

It will be recalled that in 1903 a lengthy and bitter controversy was started by the action of Mr. Curtis, who published in his magazine a detailed and verbatim report of the proceedings of the Standard revision committee and also a practically complete word for word report of the proposed changes to be made in the Standard of 1905. Also it has been believed that thru his intimate connection with Standard making, either in person or thru employees, he made use of much of the information so obtained for the purpose of preparing his own breed books and bringing them up to date with, or in advance of, the then forthcoming Standard of 1910. In the case of the publication of proposed Standard changes in 1903, quite a number of members held the opinion that he betrayed the implied trust imposed upon him by the association when the work was intrusted to him. Some claimed that a vote was taken that this matter should not be published in the press and some held to a contrary view. The Editor of the *American Fancier* in July, 1903, characterized Mr. Curtis' action as "a breach of faith and a violation of journalistic courtesy. It is both unwarranted and un-

principled." It was also held that Mr. Curtis had invalidated the copyright of the forthcoming standard by making the actual wording of changes "public property."

We do not intend to review the details of this 1903 controversy, but it was bitter and wordy and not at all helpful to the morale of the American Poultry Association. The official records, then as now, were edited and expurgated until it is difficult to arrive at the whole truth by reference to the records. It is a matter of record that Mr. Curtis tendered one of his several resignations during the high tide of this controversy, but did not actually cease to be a member of this association. Possibly if Messrs. Drevensdt, Hewes, Purvis Wyckoff and others had been in possession of verbatim stenographic records of the meetings, history might have been written differently, but we believe that in those days it was quite a brilliant stunt to make things a matter of record and everybody did not have the same facilities. However, the point stands out clearly that Mr. Curtis did print the proceedings and the exact wording of the proposed changes, when others looked upon the act as a breach of trust and it was believed that the copyright had been

invalidated by this act. Of this latter Mr. Curtis in November, 1903, published the following opinion, secured from his attorneys, which bears on the subject:

"Now it will undoubtedly transpire that when the changes that your association proposes to make in the American Standard of Perfection are presented at the meeting for consideration some of the proposed changes will be amended and others will be added. The amendments that will be made at the meeting and the additions that will then be made to these proposed changes will constitute new, original subject matter which, when embodied in the new edition of the American Standard of Perfection, will support a new copyright. Such new copyright will legally protect all those parts of the American Standard of Perfection that were in the earlier edition and those changes and additions which were not published in the poultry journals or otherwise. We believe that the new copyright will in effect protect even those parts that have been published, and so have become public property, for no one can use intelligibly those parts that are public property without the other parts of the book. The parts that have been published and so have become public property are valueless, in fact, many of them are meaningless, except in connection with other parts of the book. Besides, it would be impossible for anyone to attempt to pick out from the new edition of your book those parts that were public property, without carefully culling them out from the others with the numbers of the Reliable Poultry Journal before him. It is hardly probable that any one would undertake to do that."—From Legal Opinion of Messrs. Osgood & Davis, patent, trade-mark and copyright attorneys, Rochester,

N. Y., as submitted by editor of Reliable Poultry Journal at the Indianapolis meeting.

The above was published under the caption, "Did Not Invalidate Copyright," and we presume that this statement was swallowed by association members. As a matter of fact the attorneys did not say that this making "public property" of standard matter did not invalidate the copyright. Their "opinion" shows that such publication did invalidate copyright on such matters as was made public property—and there was a lot of it—also it is a comparatively easy matter to compare the magazines with the Standard as published at that time and pick out the matter so made public. Because of this and other matters, we believe that if any one cared to make a test case of it and to push the matter, the association would have considerable difficulty in making its copyright hold in court. Altho we doubt if any one would consider it worth while to make such a test case.

This ancient history, however,—and we refer the interested reader to the 1903-1904 files of the several poultry journals for more complete data—should make the association a bit more wary concerning the matter which it is proposed to gather for the forthcoming breed standards and any standard revision which may be in progress. It should clearly understand whether or not such material is to be made public in the poultry press, and if it is to be so published, then all of the poultry journals should receive such data in due season for publication at the same stated time. Personally, we believe it would be unwise

RED SUSSEX EGGS

that can be produced. Last year's egg customers were leading winners at the largest shows of the United States and Canada. Mr. E. O. Comforth, Slatersville, R. I., writes: "Won 1st, 2nd pullet, and 1st cockerel, Boston, January, 1916. I don't know who could have started me better." Send for mating list, giving full details about this great breed and detailed description of breeding pens.

to publish such matter in the press if it is intended to be used in the association books.

The general call for help in form of

Black Orpington cock of exceptionally fine type and color, imported direct from Australia by the Quincy Poultry Farms, A 2700 Maine St., Quincy, Ill.

suggestions and valuable data for the new breed standards is certain to bring out a generous response from fanciers and breeders. There will be a very considerable collection of material from which to make "good copy," but which

matter is the property of the American Poultry Association. It would be pleasing to have Mr. Curtis' assurance that he does not intend this time to "scoop" the rest of the press by making personal use of this collected data in his magazines or poultry books.

From the outline of the proposed breed books it would appear that to contain, even in brief, what the outline suggests, these breed books will each equal or eclipse the present "main" Standard in size. Also it is certain that there will be a very considerable collection of data, valuable and otherwise, that cannot possibly be used in the breed books or in the "main" Standard, in the light of past events, the American Poultry Association should know what is to become of this and to receive some definite assurance that the association property will not be diverted to private enterprise.

Will history repeat? Only one man can answer at the present time.

Good Business.

WE HAVE very little use for the "knocker," who is always knocking his competitors in an effort to boost his own business, and almost everybody has no use at all for a "squealer," the man who tries to get the best of the other fellow and then "squeals," or "cries baby," because things did not happen to turn out in his favor.

There is altogether too much "knocking" of competitors in all branches of the poultry business. We hear it almost everywhere, and, frankly, we don't like it. It seems to be high time for folks to get together, work for better harmony and to do more "team work" for the good of the whole industry and all concerned. We have no use at all for the man who wants and tries to "hog it all."

If a man is "not on the level," folks will find it out after a while,—they will quit him and, if he is let alone and not

Smith's White Leghorns

Another Great Win! My strain made the greatest winning at the Greater Chicago Show, January, 1916, of any exhibitor in the class. Won 1, 2, 3, 4, 5 cockerel; 1 young pen; 2 old pen; 2, 5 cock; 2, 3, 4 hen; 2, 4, 5 pullet; best display; etc. This great win, together with my big win at the Chicago Coliseum Show, December, 1915, and at the World's Fair at San Francisco, November, 1915, proves the quality of my strain. My winnings for the season were the most consistent of *any* White Leghorn breeder *anywhere!* Grandest matings in the country for 1916—matings that will produce *for you* and for me *real quality!* Let me prove it. Catalog telling all about my Leghorns sent free. Eugene Smith, 317 Galena Boulevard, Aurora, Illinois

A. A. CARVER'S 1916 Mating List R. I. Reds and Sussex OUT

Contains the greatest list of winners in the history of Carver's Red Farm. Why not buy this season of the man who mates and grows his own winners? Our last season's egg customers have won in the strongest competition.

Rhode Island REDS

Carver's Queen Quality Strain wins at Chicago Coliseum this Season

1st S. C. R. I. Red Young Pen, 2nd S. C. R. I. Red Old Pen; also won Championship Cup for best Reds in Ohio, 1912; also the two silver tea sets for best display and best cockerel, Cleveland, 1912. Winner of 100 ribbons, and customers won in 30 states in 1914, 50 ribbons, including 27 first prizes at America's largest shows, 1915.

Caesar The Great also won first at N. Y. State Fair, defeating over 50 cocks this season. All above winners grown from our own matings. Our last season's egg customers also report heavy winnings.

We pride ourselves on our many re-orders from old customers.

Undeclared Champion, CAESAR THE GREAT Defeated 50 Cocks this Season

HANOVER, PA.

boosted by "knock advertising," he will drop out of sight eventually. We are always pleased when we get a letter from one of our readers like the following:

Editor American Poultry Journal:—While I am not a regular subscriber to your valued journal, yet I watch the newsstand here and get a copy every month. I read one man's scream about how another breeder stung him on a shipment of birds. I have been interested in poultry all my life and have had a little experience in buying fancy poultry, and I have read a good many leading poultry magazines. It does not seem to me that that "squeal" is just the proper thing. I am going to relate to you a little experience I had this summer with a firm that is advertising in your journal. You will realize that among small poultrymen there is much discussion as to whether they get first-class treatment from the big fellows. Along in the early summer I had correspondence with The Pennsylvania Poultry Farm, Lancaster, Pa., about purchasing a 10-weeks-old White Wyandotte cockerel, and I finally sent them a check and received the cockerel very promptly. To all appearances he was a good specimen and got along famously until about the age he began to crow. I handle my birds every day and noticed about this time that he was beginning to show some dark feathers. To say that I was disappointed would be putting it mildly. I sat down to the typewriter and wrote the firm and asked them if they would advise my using the bird in my yards. At no place in the letter did I mention the fact that I thought I should have another bird, but simply put it up to them to say whether or not, in their judgment, I should use the cock-

erel. Almost by return mail I received notice that they were shipping me another bird to take the place of the one which had gone wrong. I received the second cockerel O. K. and \$25 could not buy him today. I am satisfied that had I written them in strong language, etc., that they would have felt that I was trying to work them for another bird and I might have heard nothing from them. I wrote to the firm and offered to return the first cockerel so that they could see for themselves, but evidently my letter satisfied them, for they did not ask for the return of the first bird. Surely no reputable breeder would stake a reputation on a few birds, and, even if a man does get "stung," it would seem to me better to keep the grievance quiet and not use it for personal advertising. M. L. ROBERTS.

Osage, Iowa, Dec. 7, 1915.

There is a manly letter and it shows good business on the part of both buyer and seller. At this time when there is so much "squealing" about "crooks" and "hucksters" we are well pleased to print it. There are some mighty fine, wholesome, honest men in all branches of the poultry business. There are no more frauds in the poultry business than in any other business, and, from our personal experience, we do not believe that among the men who make a profession of poultry breeding there are any more, or even as many, humbugs and "crooks" as there are in most other callings where there is so much opportunity for hon-

est differences of opinion. Poultry culture in all its branches is a pretty clean business, or profession, and it is not fair play to the good men—who are in the great majority—to make so much fuss and howl about the few whose methods are questionable. So much washing of dirty linen in public hurts everybody and the business as a whole.

Even among judges of Standardbred poultry there are wide differences of opinion concerning values and quality in individual specimens. In breeding birds, particularly, you cannot always see the real value, altho the breeder may know that it is there. We know a breeder, who has had more than 30 years experience and is conceded to produce wonderful specimens, and who has been in the blue at many big shows. He told us about a visitor—a poultry judge, if you please—who visited his yards and asked about a certain bird: "Why do you keep that cull?" It so happens that the "cull" is one of the most prized and highly valued breeding males on the place, and birds of his get have won many blues.

Where there is so much difference in actual values and visible values, and where there is so great an opportunity for differences of opinion as to values, it would seem to be the wisest plan for a buyer to attempt to adjust his complaints quietly with the seller. And it certainly is good business for the seller to make every possible effort to satisfy his customer. The head of a certain big railroad company instructs his employees to invariably use courtesy and to always give the passenger the benefit of the doubt. Says he,—“the passenger is always right, don't forget that and you will be of value to the company.” In our own Standard of Perfection it says:

McDannell's White Leghorns

200-Egg Strain Win-Lay-Pay

Before placing your order for Hatching Eggs or Day-Old Chicks, write me. I know I can please you. Wonderful Type and Color. Free range, meaning sturdy, vigorous birds. Order early. Circular free. Satisfaction guaranteed.

FIRST PRIZE PULLET BOSTON JAN. 1913
BRED AND OWNED BY
JOHN S. MARTIN PORT DOVER, ONT.

FIRST PRIZE COCK At Madison Sq. Garden, 1916

was a Regal White Wyandotte hatched from a setting of eggs sold to Mr. Geo. H. Ward of Manchester, Conn. Here is his letter:

Manchester, Conn., January 15, 1916.

Dear Sir:—

No doubt you will be pleased to learn that I won First Cock Bird at the Madison Square Garden Show and that he was hatched from a setting of Regal Strain eggs that I purchased of you in the spring of 1914, which adds one more to my list of winnings since I began breeding your strain of Wyandottes.

Thanking you for honorable dealings in the past and wishing you future success, I remain,

Yours very truly,

GEO. H. WARD.

I have on record a number of instances where eggs sold by me hatched New York and Boston winners, but most of them I am not at liberty to mention. This goes to show that my customers are treated "on the square" and have an equal chance with myself to produce champions. My 2,000 early hatched chicks are a fine thrifty lot, but it only goes to show that they are bred from strong, vigorous parents. If you are not satisfied with the results you are getting, why not start all over again with pure Regal Strain? I guarantee a satisfactory hatch, no matter where in America they are sent.

Exhibition Matings

Pens 1 to 20 (as they run), \$5 per 15, \$9 per 30, \$12 per 45, \$24 per 100. Eggs from special matings, \$10 per 15, \$18 per 30, \$25 per 45, \$50 per 100.

500 Cocks, Hens, Ckls. and Pullets For Sale

SPECIAL—50 big, vigorous, stay-white Dorcas cockerels, \$10, \$15, \$20 and \$25 each. Dorcas pullets, \$3, \$4 and \$5 each. Utility cockerels, \$3 and \$5 each.

Record Laying Pens

Dorcas Line

Pens 21 to 30 are headed by males bred from females with high records. Some of these male also have exhibition records. The females in the ten pens are composed of yearlings with trap-nest records from 180 to 224, and pullets of the same breeding. From these pens, eggs are \$5 per 15, \$15 per 50, \$27 per 100, \$50 per 200. Utility matings of vigorous surplus stock, \$5 per 50, \$9 per 100, \$17 per 200, \$25 per 300, \$75 per 1,000.

FREE—20-page illustrated catalog and mating list. It gives full description of my matings for 1916. Send one dime for the "Regal White Wyandotte Book." The information it contains will be worth dollars to you.

JOHN S. MARTIN

Box 51

PORT DOVER, CANADA

"Under all disqualifying clauses, the specimen shall have the benefit of the doubt." Why? Because neither fowls nor human judgment are perfect, and we all make mistakes.

If you do business on the Golden Rule plan and always give the customer the benefit of the doubt,—always consider that the customer is usually right (presumably)—and do your best to satisfy each and every complaining customer, you will do good business. No matter what your personal convictions in any given case may be, remember that the complaining customer is right,—right because he isn't satisfied or he doesn't understand,—and it is up to you to so explain or adjust matters with him that he will be satisfied, remain your friend and boost for you.

That is the only way to do modern business and it is good business. Poultrymen, buyers or sellers, are just everyday human beings,—just as good as the average and some of them a whole lot better. Think it over.

Young and Adult Stock.

WE HOPE that all of our readers who are interested in breeding Barred Plymouth Rocks are carefully reading the series on this subject by C. H. Latham, which began in January number, and we urge them to read carefully the article in this issue which compares young and adult specimens. Mr. Latham is a master-breeder, he not only can produce good ones, but he knows *how* and he has a good, sound, scientific knowledge of the breeding of his variety and of the development of the birds themselves.

All of us, with all varieties, are prone to give too much value to young stock, and, in many cases, that is just where we lose out. As a rule, specimens of any breed and variety are really only in the formative stage until they are fully matured,—frequently that means two years old, but never younger than "yearlings." The young bird is not finished in size, shape, type or plumage, and but very seldom can young birds be depended upon to breed good sound type, color, and other characteristics possessing the permanency that is found in stock bred from fully matured, adult specimens.

If the breeding stock is properly handled, not pushed for egg yield, not forced in any way, but merely kept in good condition and given reasonable periods of rest, it will breed much better quality and will be in its breeding prime at three and four years old. Breeding regularly from immature young stock, we venture to say, is a more frequent cause of the "stock running out" and small size, small eggs, lost fertility and lack of stamina, than is simply in-breeding of itself. We have seen good breeding pens that were six and eight years old and they were producing fine quality chicks. However, you cannot keep stock in breeding condition for a number of years, unless you take care of them, avoid too prolific egg production and avoid all forcing.

There are a number of varieties in which you simply do not get worth while chicks unless you are always careful to breed only from birds that are two years old or older.

It would be a good plan to give

more consideration to the characteristics of adult specimens and to breed only from good adult birds, if we are striving for quality or for best values in the show room or along practical and useful lines.

White Orpington Breeders Attention!

JUST as we thought we were about at an end of breed article contests for this season, we received the following letter from Aldrich Poultry Farm, Columbus, Ohio, breeders of quality S. C. White Orpingtons:

Columbus, Ohio.
Editor American Poultry Journal:
For the best articles submitted to American Poultry Journal on the subject of White Orpingtons as an exhibition fowl, combining high laying records with show quality, we offer three prizes:

For the best article we will give as a first prize our First Buffalo Cockerel, now heading our pen 6, the bird to be delivered July 1st, 1916. (Photo of this bird appeared in our January issue, page 131.—Ed.)

For the second best article we will give a second prize of a \$15 sitting of eggs.

For the third best article we will give a third prize of a \$10 sitting of eggs.

American Poultry Journal to be the judge and to print the three winning articles and any others considered worthy. We do this to stimulate interest in S. C. White Orpingtons and for the good it will do all breeders of the variety.

ALDRICH POULTRY FARM.
E. S. Aldrich.

Attention! White Orpington breeders, here is your opportunity to earn a good cockerel and some quality eggs for hatching. Write your articles on one side of the paper only and try to keep them within from 800 to 1,000 words. Let's see how good an Orpington article you can write.

This contest will close May 1st, 1916. The awards will be announced in June issue of AMERICAN POULTRY JOURNAL. We reserve the right to retain all articles submitted and to publish any we consider worthy.

Send all articles marked "White Orpington Contest" to Dr. P. T. Woods, Lock Box 4, Silver Lake, Mass.

Short-Sightedness.

WHEN things are going wrong, it is no time to shut your eyes and ears and say, "It is not so!", or to grumble about the conditions in private. Better get out in the open and work for what you believe right.

All the shouting, vituperation, and intimidating publicity in the world will never make wrong into right. And it is manifestly wrong for any one man, or any small group of men, to try to control and to dictate the business methods of all other men engaged in the same line of business, particularly when such

You Want EGGS

—not only eggs that hatch but eggs that will produce the champion winners; that will conquer your rival—just as the

H. W. HALBACH

R. R. No. 1, Dept. D, - WATERFORD, WIS.

"personages," who would assume such control, may well be believed to be actuated by selfish interests. To accuse others of "greed of gain" and "greed of good American dollars," when those who are doing the "bawling out" of competitors are actuated by motives which certainly simulate the same kind of "Greed" in a highly hypertrophied condition, is evidence of mental and moral short-sightedness.

Some of the "leaders" in our poultry fraternity today are guilty of this very form of short-sightedness, and they are leading their followers and our great fraternal organization into perilous ways which may cause ruin and degradation. Mental myopia and moral astigmatism are dangerous qualities for a leader—or would-be leader—to rely upon in these days when people—the common people—are beginning to think. It is hardly fitting that any one man,—who is piling up money, made by hook-or-crook garnering of the hard earned dollars of American poultrymen and has rapidly increased his business interests so that he can reap more of such dollars—should assume a position where he attempts to control all associations of poultry keepers and to dictate to all people breeding poultry what they shall breed, what their birds shall be like, and by what names their birds shall be called; with a penalty for disobedience that means public defamation and business ruin.

It is strange that any representative breeders,—specialists or otherwise,—should lend themselves to the imperialistic policies of such a "leader," thru fear of the consequences of disobedience. Such "personages" presumably realize that such a "leader" may—by following his well established precedents—turn at any time and rend them asunder, but tho they may fear—and even put it into secret words—that he can "make or break them"; such fear is not well grounded in fact. A united policy for the good of all poultrymen among such breeders would soon uproot any such condition. It is difficult to see how such

breeder "personages" can be so short-sighted as to imagine that by killing competition and destroying various "unrecognized" types of poultry breeders, or other poultry interests, that they will in any way benefit themselves. It seems strange that they cannot see that by such procedure they are actually striving to put *their own customers* out of business. Such business methods are bound to boomerang sooner or later.

Single Comb R. I. Red cockerel from one of the winning young pens at the Illinois State Show, De Kalb, January, 1916. Owned by Geo. H. Shoenhard, Box 17, Freeport, Ill.

When it comes to "huckstering" and the defrauding of buyers the following illustration, from a letter recently sent us, is suggestive:

"Talk about extravagant claims, look at the full page ad of ————"

"I have a photograph of a very bum specimen that came from there on a \$50 order. I took the photograph myself."

"Now, when some little known, or un-

known, breeder sells a bird from \$2 up to \$6, the customer is not going to get stung very bad, even if he isn't satisfied. But when he pays a breeder \$50 for a bird that could not get a ribbon at a county fair, I call that stinging him."

The man who wrote that letter has been a judge of poultry and a good one. We have quite a bunch of such letters, but it is not our intention to betray the confidence of correspondents.

The tenets of our American Poultry Association, as printed on its letter head, are "Progress, Purity, Protection" and "Our Field: Every Poultry Interest." Are we going to make that broad statement mean something, even approach meaning what it says, or are we going to kill off small poultry breeders and attempt to organize a great poultry trust controlled by a few political ringers? It is time for every thinking poultryman or woman on the American Continent to think deeply in this matter and then to act with the courage of conviction. S. T. Campbell, Mansfield, Ohio, is the present secretary of the American Poultry Association and he is very desirous to hold his job—which is a good quality if it don't run to seeking favor with "bosses." Write him and express your views plainly in this matter—a few words will do—but make him understand just how you feel about an association that should be for "every poultry interest" but is not. But, in writing, make it very plain to him that you do not wish your letter sent to any political boss of the association, but held by him in trust and presented to the full assembly at the annual meeting. *Write today!* Whether you are a member or not *write* to the secretary—for don't forget that the field of the organization is stated to be "every poultry interest."

KEELER'S WHITE WYANDOTTES

The Aristocrats of the White Wyandotte World

Have again demonstrated their superiority by winning at Chicago, January, 1916, in a class of 194 White Wyandottes, 1-2-3-4 cockerels, 1-2-4 cocks, 1-5 hens, 1-5 pullets, 1-3 young pens and 2-4 old pens. **Seven specials, including Silver Cup for Grand Championship, \$50.00 Silver Cup for most points on any breed in whole show (3,500 birds); also \$25.00 membership cup.**

The World's Greatest Strain. EGGS! EGGS! EGGS! EGGS!

The pens that will produce 1916-17 winners were mated December 15th, and I am in a position to supply you with eggs from the 16 best matings of White Wyandottes in America. These pens contain my Chicago winners, also the best birds reared the past three years—sons, daughters, brothers and sisters to these winners. They are bred right and mated right and will produce the winners for America's best shows. Send for my 1916 64-page art catalog and mating list (5 red stamps appreciated). Eggs, \$5.00 per 15; \$9.00 per 30; \$14.00 per 50; \$25.00 per 100. Special matings, \$10.00 and \$15.00 per 15.

GENSEMER BROS., 161 Main St., CRESTON, OHIO

Standardbred fowls were received from Massachusetts, New Hampshire, New York, Ohio, Illinois, Indiana, Nebraska, Oklahoma, Wyoming and Nova Scotia.

The prizes were offered by M. C. Wilson Oil City, Penn., breeder of the "Beauty and Business Strain."

The first prize, a trio of R. C. White Leghorns, for best article, was won by Walter T. Mattinson, Glace Bay, Nova Scotia.

The second prize, a pair of R. C. White Leghorns, for next best article, was won by Lawton B. Quimby, 322 Pleasant St., Laconia, New Hampshire.

Mr. Wilson has been notified of awards and will ship prizes promptly. The winning articles are published in this issue and other articles of merit will be printed later.

"Handwriting on the Wall."

THE following are extracts from letters of prominent poultry breeders, all members in good standing in the American Poultry Association:

"I have been more than pleased at your attitude on the Harrison question. It may be possible that Mr. Harrison exceeded the speed limit a little, but you know and I know that we occasionally run up against customers who are absolutely unreasonable and there are always two sides to the question.

"I am very glad you have gone after the Czar of Poultrydom the way you have and I think there is a very strong feeling growing up that the American Poultry Association should be more democratic than it has been in the past; at least, I feel that way. Do not use my name in this connection, because we poor

breeders are obliged to disguise our feelings for business reasons, but a good many of us feel that way."—Breeder.

"Any editor would be better off to stay at home and keep his own business

The above bird headed first young pen of Speckled Sussex at the Greater Chicago Show, January, 1916; also was first cockerel at the late Detroit Show. Owned by L. C. Brackett, Hopkins, Mich.

going right than overload the American Poultry Association with 'Resolved' and 'Whereas' at Frisco. This resolve business kills the little fellow, but the big gun grins and shakes his head. He knows the editor will give him a five-page write up just as soon as he gets home and about four times a year. The 'reformer' is hot to reform the other fellow, but how about reforming his own business? It needs it, but will he stand for it?"—Little Fellow.

"You will be interested in 'Weekly News Letter' enclosed, showing that the man who tries to ridicule you has, in his own company been fined \$50 for misrepresentation and misbranding some of their goods. He has been very active in exposing others for offenses that he seems to be equally guilty of. Not only in this case, but in his articles or write-ups for advertisers he has gone the limit along the same line. I have written him several times, showing where he had made claims for winnings at shows where I had won and that the parties who claimed to have won there had no birds at the show stated. He not only refused to make my corrections, but wrote an article himself repeating the false claims. I asked him in simple justice to look up the winnings and see for himself that the claims were false, but received an insulting reply only."—Fancier.

"Mighty glad you have dipped into the

Leitner's S. C. Buff Leghorns

Have made another great win at Rochester, N. Y., February, 1916, on two birds, winning 2nd cock, 3rd hen. At Chicago, 1915, 1st pullet, 2nd cockerel. My winnings for the season were the most consistent of any Buff Leghorn breeder anywhere. Grandest matings in the country for 1916—matings that will produce real quality. Let me prove it. "The time is ripe for a change of officers in the American Poultry Association. Your open letter was read with interest and pleasure."—Veteran Fancier.

"I have your open letter to American Poultry Association and wish to congratulate you on the punch you have injected into same. You have hit the nail on the head. I am pleased to see you take a hand in the game in this matter."—American Poultry Association Judge.

These are only a few samples, but we have many more, and some of them altogether "too hot" to print. We are glad to get these letters and we assure our correspondents that we have no intention of exposing them to slanderous attack by making known the names of the writers of these letters.

Rat Hunting

RATS do a great deal of damage on the poultry plant. They eat and destroy large quantities of grain, eat eggs, steal and kill chickens and breed disease. It is difficult to make any poultry house really rat-proof and it is next to impossible to keep rats out of earth floor houses. They will breed under wood and cement floors and the price of freedom from these pests is eternal vigilance.

We are particularly pestered with these varmints, for we live on shore of

lake and pond and a large part of our place is woodland; so we have common house rats, water rats and wood rats of many varieties to contend with. Poison and rat virus have never proved satisfactory with us. Where we have used these means of fighting rats the results have been negative. We cannot use poison around the poultry houses for fear of poisoning valuable fowls.

Traps of various sorts are effective for a time, but all traps must be regu-

larly scalded and smoked or the rats will not go near them after the first catch or two. Fourteen and 16-quart galvanized iron pails about half full of water will catch a good many of these pests, in season when the water does not freeze. The best bait we have found for traps is fish, clams, oysters and lobsters. This bait is tied in cheese cloth before using in trap, as it makes sure of the trap being sprung when the soft bait is used.

Several times a year we organize a rat hunt and this is the most effective means of keeping down the pests. We have a cat that is a very good ratter and an Airedale terrier "Shag" that is a wonder at catching rodents.

Right now is a good season to start ratting. Well and thoroly done it will prove rather good sport and it is certainly effective. We started a big hunt in the middle of March while the ground was still frozen. With all holes in the house plugged, the earth floors were dug up around and under the sills, and the dog "Shag" did the rest. Our first "bag" was three females and one enormous male in a small earth floor coop. Then we piled them up thick and fast. Board floor houses were raised up to admit cat or dog, all small coops moved and rat holes in soil dug into. Any holes not possible to open up were smoked out with blasting powder—exploded loose in the hole on top of a bit of news paper and the hole plugged to confine the fumes. It took all the man's spare time for three days to clean things up, but we sure got a big bunch of rats,—got them in time to break up their breeding season for quite a while.

Most of the pests killed were burned,

Fourth S. C. White Leghorn hen at Boston, 1916. Bred and owned by Willow Tree Poultry Farm, H. P. McKean, Jr., Beverly Farms, Mass.

LATHAM'S BEAUTY AND UTILITY STRAIN Barred Rocks WIN

The record to date over 320 prizes, including 42 first prizes. All these winning birds were bred, raised and exhibited by the originator and owner of this strain. Heading my matings for 1916 are 13 of the finest pullet-bred males I ever had in my yards, including five first and second prize birds at the Palace and Boston shows of this year. All these males are either winners or bred from winners. Females in the matings are the cream of 30 years study and successful breeding of this line of Barred Plymouth Rocks. This strain is the richest blood line of high winning females at America's greatest show that are living today.

Eggs for Hatching, \$10 per Sitting

Better value in eggs for hatching cannot be bought anywhere at any price. Every egg I sell for hatching I guarantee shall come from the females that are in these matings, being the same matings I shall breed for myself.

The BEAUTY and UTILITY STRAIN is bred exclusively for production of Exhibition Females.

2nd Prize Pullet Bred Cockerel, Palace Show, 1915

A. C. WILLIAMS Ravenna, Ohio

BREEDER OF

Speckled Sussex and Buff Orpingtons

SPECKLED SUSSEX

At the National Meeting and Club Show, Chicago, December, 1915, we won 1st Cock, 1st and 4th Hens, 4th Cockerel, 5th Pullet, 2d Old Pen, 3d Young Pen. At Cleveland, January, 1916, we won 1st and 2d Young Pens, 1st Old Pen, 1st and 2d Hens, 1st Cockerel, 1st, 2d and 5th Pullets.

BUFF ORPINGTONS

At the National Meeting and Club Show, December, 1915, we won eleven (11) prizes out of fifteen entries. At Cleveland, January, 1916, we won 1st, 3d and 4th Young Pens, 1st and 3d Old Pens, 2d, 3d and 5th on Cocks, 3d Hen, 1st, 2d and 5th on Cockerels; 4th and 5th on Pullets. Our first cockerel, "King Edward," won A. P. A. Medal as best cockerel in entire show, all breeds competing. Stock of Both Varieties For Sale. Mated Trios and Pens a Specialty. Eggs in Season. Write Me Your Wants.

but, to satisfy him, "Shag" was permitted to bury a few victims in cold storage in the snow out in the woods. It pleases him and does no harm, for some wild inhabitant of the woods will have carried off these "stored" rats before "Shag" has an opportunity to recall his "buried treasure." Have a rat hunt. It pays and it is rather good fun, with plenty of "thrillers" when the scrap is hot at close quarters.

DR. WOODS' NOTES AND COMMENT.

APRIL.

A gush of bird-song, a patter of dew,
A cloud, and a rainbow's warning,
Suddenly sunshine and perfect blue—
An April day in the morning.

—Spofford.

April chickens, in all American, English, Asiatic, French and other large varieties, are among the most desirable if you want best growth and productiveness. Hatch and grow all you can care for properly.

Remember that, no matter how good the parent stock may be, when you buy hatching eggs it is up to you to properly incubate the eggs and to properly rear the chickens; if you do not develop the young birds in the right way you are liable to have mostly culls as a result of your season's work. Faulty incubation and brooding, lack of care, poor food, not enough food, an insufficient variety of wholesome food, crowding, vermin, lack of well proportioned shade and sunshine, lack of greens, lack of outdoor exercise, lack of fresh air in sleeping quarters, all tend toward spoiling your crop of chicks and making culls

out of what would otherwise be good quality, well developed stock. Do not be in too great a hurry to blame the breeder who sold you the eggs or chicks, see if the greater part of the fault is nearer home.

Badly managed, poorly nourished, growing chickens will show off-colored feathers, poor type, stunting of body, deformities, and other evidences of malnutrition and lack of good care that make culls of what would otherwise be good specimens. It is possible that one dollar's worth of care and food will

Single Comb Brown Leghorn pullet of good type and color. Owned by Quincy Poultry Farms, A 2700 Maine St., Quincy, Ill.

grow "just chicken" to maturity, but if you want to properly grow to maturity a real quality specimen it is likely to cost you from \$2 to \$5. Few animals show greater response to careful management and good feeding than poultry. Also few animals degenerate more rapidly under bad management than poultry.

Food plays an important part in the development of chicks. Poor or cheap foods yield poor and cheap results. Stale foods are likely to be mouldy, musty or otherwise spoiled. Even if not actually spoiled, stale food is inferior in quality to fresh food. Freshly ground or cracked grain, made from sound grains, is in every way superior to ground or cracked grain that has been stored for a long time after milling. Also there is greater opportunity for use of inferior quality or damaged grain, and for adulteration, in ground and cracked products. Wherever possible buy of a responsible miller who will deliver fresh ground goods from sound well-seasoned grains. A hand or power grinding mill will make it possible to have fresh ground chick food at home, but be sure that the grain is sound, sweet and wholesome.

Cracked corn at this season of the year does not keep sweet and wholesome for very long and loses much of its feeding value thru keeping, even tho it should not spoil quickly. If it does not begin to heat and spoil on long keeping, you can figure that it has been treated to preserve it, and possibly to disguise inferior quality. Spoiled or damaged corn is dangerous and starts

GEO. P. SANFORD

State Road

WHEATON, ILL.

digestive troubles which result in losses of many chickens every season. Be sure that all of the food given to your growing stock is sweet and wholesome. Old pigeons apparently eat without injury food that will kill the squabs in the nest. Successful pigeon growers found out long ago that the best feeding grain is the cheapest in the end and they feed their squab-breeders on sound, sweet, wholesome old grain. Poultry keepers would do well to follow their example.

* * *

Keep the growing chickens clean and comfortable. Feed them well on wholesome food and a variety of it. Do not crowd them. See that their quarters are well sunned and aired daily. Give them an outdoor run and as soon as possible a grass run. Keep them free from lice and mites. Don't coddle them. Provide a sheltered run and teach them to run to the weather, providing reasonable shelter from high winds and sudden storms.

* * *

A California professor has been making a study of "scientific feeding and the effects of different foods upon the moral character." He claims that feeding upon beef "promotes savagery," while "if one eats chicken exclusively, it brings out the finest qualities of the person's higher nature." We have long believed that people generally should eat more poultry and eggs—it is good for the business—and now we have this "scientific" indorsement of the unusual value and desirability of chicken as an article of diet. Maybe if we can only get the "civilized" races to consume more poultry and poultry products and less beef, we may arrive at peace and the ultimate prevention of war for all time. Who knows?

* * *

In the official Quarterly Bulletin of the American Poultry Association for January, we find above a lengthy resolution the following caption: "Resolution Adopted by Grant M. Curtis On Request of E. B. Thompson, Amenia, N. Y." It was kind of G. M. C., "so to speak," to adopt this matter "in substance." Also, "so it would appear," this adoption, "as the saying is," would "in substance" confirm, "so it would seem," the contention of R. G. Bailey that the San Francisco Convention was "composed of 90 per cent Grant M. Curtis and 10 per cent of the balance of the United States and Canada."

* * *

If any reader is at a loss to understand where we got so many of the "as it would appear" quoted above, we are pleased to inform him that they are quoted freely from a contemporary which has, "so it would seem," adopted a new form of evasive journalism, "so to speak," which appears to be designed for the purpose of providing holes thru which to crawl out of law suits. At least, "so it would seem in substance."

* * *

I. K. Felch, who has always advocated a Standard true to Nature, says: "We have outgrown the belief that standards are for the sole use of the judges in our exhibitions; they are and should be the text book for the beginner in poultry culture. We are therefore opposed to that heresy which demands that standards shall be formed and illustrations made otherwise than true likenesses of Nature's best. We hear the expressions used often, 'We want the

standard better than we have seen, for the breeder to breed up to; what nonsense! The Almighty as a rule gives us in the best efforts of Nature the best merit and productive power; what folly to distort this handiwork of the Creator. When we describe each section according to the best Nature has produced, doing this in all sections, we have perfection as a whole. It is true Nature produces individual sections perfect, but perfection as a whole is impossible, for it is written, 'None are perfect, not one.' The chance to produce a specimen to score one hundred points is just one in a million, eight hundred and twenty-eight thousand, eight hundred. Then why augment this difficulty by making standards foreign to Nature in the breeds."

* * *

Apologos of the American Poultry Association's proposed crusade to reform the other fellow's advertising, D. Lincoln Orr, in February R. P. J. says: "While on the advertising question, let me say I am glad something is to be done. Mr. Thompson deserves credit for starting the ball rolling. I would like to ask 'Ed.' what he thinks of the A. P. A.'s advertisement when it says about the Standard—'Judge, mate and breed all domestic chickens?' This advertisement was carried all thru Mr. Thompson's term of office. 'Mating and breeding!' The mote in our own eyes must be gotten out first."

* * *

No doubt reform is needed in the wording of advertising, altho to us it appears that poultry advertisers are among the lesser offenders in the "employment of all forms of exaggeration that are clearly liable either thru inten-

tion or ignorance to mislead, deceive or defraud the inexperienced or unwary." Compared with general advertising, as seen in our daily press and other periodicals, and the majority of all kinds of class advertising, poultry advertisements are fairly clean and free from misrepresentation. Like a good many other hasty and not overwell considered "reform movements" proposed by the A. P. A., this crusade for reform in advertising started out wrong. It was conceived largely in selfish interest. It wanted to reform the other fellow's—the competitor's—advertising. In other words "that fellow claims to have some-

White Wyandotte cock. One of the many prize winners owned and bred by Roy Kemper, Clarence, Mo.

thing better than I have and I think he is getting business I ought to have, make him behave and turn the orders over to me." Any reform so conceived won't work right.

* * *

The best way to accomplish any reform is by setting a good example. Do right yourself before you ask the other fellow to do right. Try to show him, by setting him a good example, that doing right because it is right is the best way to succeed. I believe that I am as loyal a member of the A. P. A. as any man in the association, but I am not blinded by the glory of membership nor any of the wonders the A. P. A. may have been supposed to have accomplished. I am still somewhat in the dark as to what good it does a member to be a member, except that I can see how those who play politics and make use of the association and its funds, or travel at its expense, may get something out of it; else it is difficult to understand why they work so hard to remain a part of the "machine." But certainly anyone with any vision at all can see that if the A. P. A. really desires to work reform in the poultry world, it should first reform itself and clean up its own door yard. Village improvement can be accomplished more quickly by cleaning up and improving the home place, setting the neighbors a good example, which pride compels them to follow; but you can't demand that the neighbor clean up and let your home place go foul. The same is true of our association, let's try to clean up the A. P. A. and remedy evils in its advertising and that of its members before we attempt to go outside and reform the world at large.

Something Entirely New!

My Special plan for 1916 in regard to EGGS FOR HATCHING from the world famous ARISTOCRATS. This offer comes as a complete

SURPRISE

It is surely the greatest, most striking and startling offer made by any breeder of Barred Rocks this season. If you want to see and study something absolutely NEW, write today for this SPECIAL PLAN. A postal card will do.

Some of the men who are howling the loudest about misleading statements in the advertising of poultry breeders who have little political pull and no association membership, are among our chief offenders in the matter of exaggeration in advertising and misleading statements in their own ads. Let everybody start in to set a good example for his fellow breeders by cleaning up his own door yard first. Start the work honestly and right and we will boost it all we can, but the trickery and buncombe with which this crusade started and the smallness and meanness which has characterized some of the alleged public investigations to date, is disgusting to us.

* * *

Some of the advertisements of the American Standard of Perfection have been toned down a bit, but they are still misleading and calculated to deceive the inexperienced and unwary purchaser. For example:

"The Standard is the only American authority on the required characteristics of all breeds and varieties. You cannot raise pure-bred fowls intelligently without it."—*A. P. A. Bulletin* for January, 1916. Obviously, that statement is false and misleading for the Standard does not cover all breeds and varieties. It is not the only authoritative work on breeds and varieties, and better descriptions and illustrations and information about breeds and varieties are to be found in several works on poultry. Also some of our leading breeders have raised pure-bred fowls without it and the book says nothing whatever about how to mate, breed or raise pure-bred, or any other kind, of fowls.

"The Standard by which all poultry

are mated and judged."—*Poultry Garden and Home Advocate, Canada*, February. Another false and misleading statement for it contains nothing about mating and it does not cover all poultry.

"You cannot breed exhibition fowls without it."—February, 1916, R. P. J. A statement that is not true. The leading breeder of exhibition White Leghorns says he never owned or looked into a Standard until after he had arrived with an international reputation as a successful breeder and exhibitor. Only last year the president of the A. P. A., in his advertising, said of his own birds, "they are the Standard by which all other Barred Rocks are judged," and he was still sending out a circular containing that statement last December, some weeks after introduction of the reform resolution to the Association.

"Don't fail to secure a copy of the New Standard before you attempt to mate your breeding pens. You cannot mate correctly without a copy of this book. It is the recognized American authority on all matters pertaining to breeding and exhibiting poultry."—February, 1916, *A. P. World*. That statement is absolutely untrue. It is deliberately false and misleading and very likely to deceive and defraud the inexperienced and unwary. As we have before stated the Standard tells nothing about how to mate or breed. It most emphatically does not even make a pretense of covering "all matters pertaining to breeding and exhibiting poultry."

We could go on and give many other examples taken from recent advertising for which the A. P. A.—or members of the reform movement are directly re-

sponsible; but what's the use? What is needed first is a wholesome clean up of the association door yard. Also, we reckon, that most of us have a door yard of our own that will stand cleaning up. Never mind what the other fellow and competitor is doing, let's begin at home with our little reform and then try to set the other fellow a good example.

* * *

F. L. Platt, who has become identified with this "purify the other fellow movement," appears to have some misgivings about the leadership of the Standard; he says:

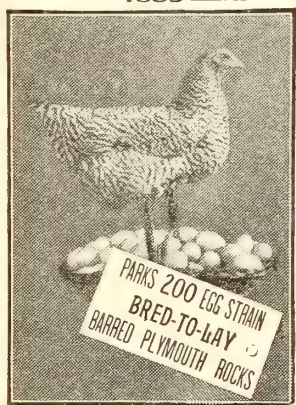

"I cannot bring myself any more to look on the Standard as a Standard of Perfection. Looking at our breeds as evolving creatures of life, I think I understand what is meant when it is said that life is not a station, not stationary. Life is, or should be, progress, and progress does not know perfection. The Standard appeals to me as an interpretation of this progress, the Standard makers being interpreters. Having interpreted the work of master breeders, having studied the decisions of those experienced judges who know quality, and reduced the observations to rules and figures, a new Standard is published. Then with book in hand, are we to turn to the great teachers and jest them about their lack of book learning? They have seen new editions of the Standard come and pass away. * * * * *

"Please, Mr. President, of the A. P. A., do not make your judges go in the show room with your set of copied rules—copied from Nature's winning specimens by this human family of which we are all members, and whose

PARKS' Barred Plym. Rocks

BRED-TO-AND-DO-LAY

1916

J. W. PARKS

ARE AMERICAS' OLDEST and GREATEST LAYING STRAIN

In fact they are conceded by such men as Dr. Woods, Grant M. Curtis, Judge Schwab, Prof. Morrison, Wm. Denny and others to be the daddy laying strain of them all.

Their early history dates back to the year 1889, when a flock of 16 at that time averaged but 96 eggs each. While today they have to their credit individual records as high as 290 eggs in one year. Sworn continuous laying records up to 148 eggs. Small flock averages up to 242 eggs. While a flock of 128 averaged 208 eggs in one year and, better still, they just proved their official laying capacity by laying more eggs in the last Missouri Laying Contest than any other breed entered (The Famous English Leghorns included). In addition to making the best winter month record in the contest, Mr. W. H. Grabill, New Castle, Pa., under date February 3, 1916, writes: "I won Egg Laying Contest of New Castle Pet Stock Association on pullets from eggs of you; winning over three pens of Barron White Leghorns." Under date of February 2, 1916, we received the following from Mr. W. W. Brown, Ardsley, N. Y.: "Fourteen pullets from chicks of you just finished their lay year with 3,411 eggs."

That's what over 26 years of careful, selection, trapnesting and pedigreeing for eggs has done, and not all at the sacrifice of Standard qualities, as our 18 firsts and seconds won at Elgin, Ill., Youngstown, O., Utica, N. Y., Wheeling, W. Va., and Altoona, in addition to four American Barred Rock Club Specials show. That's why our customers today include Madison Square Garden winning breeders.

Eggs that hatch, pedigreed selected, \$5 per 15; \$8 per 30; \$11 per 50; \$20 per 100. Selected utility, \$2 per 13; \$6 per 45; \$12 per 100.

Day-Old Chicks that develop into layers. Chick and Egg circular free. Large 40-page illustrated catalog that tells all about how America's oldest and greatest laying strain has been produced, a dime.

knowledge, we must be frank to confess, is still in a fledging condition."

* * *

From the above we take it that Mr. Platt, whom we believe to be a conscientious judge of quality poultry, considers that the Standard is but a "set of copied rules" representing the Standard makers interpretation of the prevailing fashion in recognized breeds and varieties of poultry, as set by the progress of the fancier-breeders who are specialists in the development of their favorites. In other words the Standard, instead of leading and presenting an ideal for the breeder to breed up to, merely follows the work of the master breeders and endeavors to report and interpret their work, formulating a set of rules that judges are supposed to comply with when adjudicating, but which they cannot conform to because the master breeders lead the fashion with their specialized products and the Standard trails along behind. The breeder specialists set the pace and lead the fashion and the Standard makers follow and interpret progress. Is that it? If so,

First prize S. C. White Orpington pullet. South Shore Country Club Fair, Chicago, 1915. Bred and owned by Edmond J. Harbin, Box A, 457 Riverside, Ill.

then it is no wonder that judges appear to be guided more by the prevailing fashion than by Standard rules and laws.

* * *

Why not be even a little more frank and admit that the Standard is published chiefly as a source of revenue and that is the reason for the new editions every few years, which render previous editions obsolete, but which really contain but few material changes that mark progress. Why not do as I. K. Felch has often urged, make a Standard that will represent Nature at her best? Why not make it include *all* known breeds and varieties? Why not include the essentials of line breeding, mating, management, conditioning, and growing of quality chicks? This would not make expert breeders of novices, but it would help such to get started right and to avoid the degeneration of Standard-bred stock into mongrel culls, which is sure to follow a few seasons of haphazard breeding unless some experienced person helps with good advice. The book cannot provide the novice with the experience he must have in order to succeed, but it can at least show him the right road to travel. A book made right ought to stand without revision for 20

RILEY'S White Wyandottes

Broke all records at the Ohio State Fair, September, 1913, winning six firsts, three seconds and two thirds. The quality of my exhibit was freely commended by both judges and breeders. This, together with my winnings of December, 1914, at the Great Coliseum Poultry Show and Toledo proves their quality as breeders. They are bred to lay with the same care they are bred to win. Why not try the strain that win as well as lay? Eggs from pens headed by my winners at \$3.00 and \$5.00 per 15 eggs. Some nice Cockerels at \$5.00, \$7.50 and \$10.00. Send for catalog.

years and be well worth the purchase price.

* * *

Some time ago we stated that we believe that it is the oil in fish that gives a fishy taste to eggs and that fresh fish and fish scrap may be fed freely to poultry without giving a fishy taste to the eggs, provided the fish is comparatively free from oil or fat. Several subscribers have written to ask how the oil may be extracted from fish. We do not know the best way, but we believe it can be done. We feed fresh fish and fish scrap freely to growing stock and to layers and have never had any bad results. On consulting a fish scrap manufacturer he told us that in making scrap he had not found any practical way to extract the oil and that it is their practice to use only fish that are comparatively free from oil. The cod-fish carries most of its oil in the liver and the same is true of some other fish. In this manufacturer's fish scrap, cod-fish waste—chiefly heads—is used large-

First prize Partridge Rock cockerel in a large class, Chicago Coliseum, December, 1915. A bird showing good Rock type and color. Bred and owned by Meadow Lawn Poultry Yards, Dept. C. D., Sand Creek, Mich.

ly; the livers are too valuable to be used for such purpose. Certain fish like herring, porgies, rays, horse mackerel, sharks, etc., carry a large proportion of oil in the flesh and are not considered desirable for making fish scrap for feeding layers but the contained oil does not make them undesirable for feeding growing stock unless intended for market purposes, when oily fish should not be fed for several weeks prior to finishing. When we are obliged to use fresh fish that is oily, we boil the fish; allow the stew to cool and skim off the excess oil or fat before feeding or mixing with the mash. We have had only good results from feeding fresh fish and fresh fish scrap to poultry and have never yet had a chicken with a fishy flavor or eggs so tainted. Fish makes a splendid growing food for chickens and may be fed quite freely—much more so than meat—and there are generally plenty of waste fish of both the salt water and fresh water sorts available at low cost.

* * *

A very good fish scrap for poultry feeding is produced as a by-product in the manufacture of glue. We under-

stand that oily fish cannot be used to make good glue, and therefore such scrap is practically free from fish oil. Fish scrap when purchased should be dry and free from lumps. If lumpy and caked, with greenish color shown on breaking down the lumps, it has heated and spoiled and is unfit for poultry food. Generally, heating and spoiling is the result of storing the scrap in a damp place or allowing it to get wet.

* * *

February gave us a long continued spell of real old-fashioned Winter weather. Owing to severe cold and heavy snows we did not begin hatching as early as usual. Our first hen was set March 1st on No. 1 dark brown eggs from our best White Plymouth Rocks. Fertility tests and hatchery reports showed splendid fertility in all of February eggs.

* * *

We have secured from Herb E. Sharp, Spokane, Wash., a cockerel, two pullets and one hen of his sex-bred Black Langshans. These birds he guarantees to produce not less than 75 per cent pullets. We intend to use them as a foundation and to test out his claims carefully. The birds arrived on Saturday, February 26th, having been nearly nine days on the road. Owing to carelessness of the express company they were nearly starved on the road and were very thin on arrival, but were healthy, active and vigorous and are now coming into fine condition. With these birds we received a detailed pedigree record dating back to an original mating for sex-production in the Spring of 1912. We have installed this small flock in a 10x16 ft. open-front house, equipped with trap nests and shall follow the individual records of the three females with considerable interest. It is our intention to set all eggs laid up to mid-summer and to keep a careful pedigree record of all chicks. We shall also grow a number of Black Langshan chicks from other lines of exhibition-bred stock to compare with the Spokane Langshans.

* * *

— Grain continues to be shipped out of the country in amazingly large quantities, every ship clearing for European ports carries a large proportion of grain in her cargo. Grain prices continue high and are likely to stay high, while the quality of grain offered for poultry feeding is none too good. From present indications poultrymen in this section will not grow as large crops of chickens as usual.

* * *

The U. S. Department of Agriculture is applying the Federal Food and Drugs Act to interstate shipments of eggs in the shell. In the opinion of the Department, eggs which contain yolks stuck to the shell, mouldy eggs, black spots, mixed rots, addled eggs, black rots, and any other eggs which consist wholly or in part of a filthy, decomposed or putrid substance, are adulterated. Country shippers are advised to candle all eggs before making interstate shipments. It is considered practicable by candling to eliminate from any given shipment most of the eggs regarded by the Department as adulterated. Any case of eggs containing over 5 per cent of bad eggs—more than one and one-half dozen in a 30-dozen case—will be considered as adulterated. To avoid loss of shipments and a possible fine for adulterating eggs, make sure that all shipments are care-

"A Revolution in Egg Production" is a book along an entirely new line. Every poultryman should have it. See the advertisement on page 655.

fully candled and are free from bad eggs. The sale of tested out eggs from incubators for any food purposes is now forbidden by law. The poultry keeper should thoroly cook all infertile eggs tested out of incubators and use same for feeding his poultry, if eggs are in good condition; if eggs are not in good order bury them.

* * *

Bad eggs sold for manufacturing purposes must not be sold in the shell, if intended for foreign or interstate commerce. Such eggs, for tanning or other technical uses, must be removed from the shell and "denatured" prior to shipment. Such eggs cannot be sold for food purposes. Formerly a considerable quantity of salvaged bad eggs found their way into food products thru bakeries and manufacturers of cheap candies.

* * *

John H. Moore in the *Poultry Item* says:

"If the American Poultry Association really has at heart the best interests of the 'fancy' it will eliminate from its exhibition standards those requirements to attain which one must depart from natural methods of breeding; it will reconsider its purpose to issue separate breed standards, the chief object of which, as I understand, is to instruct the breeder of certain varieties of fowls how to practice double mating; it will come back to nature's teachings, to God's ways, and will speedily hand Satan his passport.

"No skillful breeder will be developed thru the medium of breed standards, whether they are intended to teach double mating, single mating, or both systems. Intelligence, care, patience, energy, good judgment, and natural talent for the study and mating of fowls, are the qualifications one must have to become a good breeder, and, possessing these characteristics, experience is the only teacher needed. He who has the points I have mentioned is all right; he who has not is all wrong; and breed standard instructions will avail nothing in either case. No person whomsoever can properly instruct Tom, Dick and Harry how to mate fowls so as to secure good results. The skillful breeder has enough to do to successfully mate his own birds, which are constantly under his eyes. Many exhibitors who win honors in the show room cannot breed prize birds. They buy the specimens they use for exhibition purposes. All the separate breed standards under the sun, or that may appear, will not make a single good breeder. The height to which a breeder may attain in skillful mating will depend upon his own individuality. The separate breed standards which the American Poultry Association propose to publish may afford it a small temporary income, but I do not feel that the policy it has adopted is a wise one, for I believe these standards will prove undesirable and disappointing."

* * *

Members of the American Poultry Association would do well to think over what Mr. Moore has to say before they allow themselves to be hypnotized or deceive themselves with a burden of "gold bricks." These are not the most promising times for book publishing even by the best of publishers—and to date the association has not qualified in the publishing class even to the extent of winning an "H. C." ribbon. We should look upon the publication of separate breed standards from its commercial aspect—can the association committee produce creditable separate breed standards that will really be reliable text books and guides to mating and breeding for exhibition quality? Will such text books be fairly permanent or will they be subject to many changes thru the change of fashion and the revision of the regular standard every few years? Is there any real demand for such standards? Will they sell and will they pay? Let us be sure that we do not fool ourselves with any philanthropic buncombe and humbug about the good we are going to do novices by

the publication of these standards, or how we are going to make it easier for the "poor suckers" to breed winning specimens. The association is going into the publishing business because it hopes to make the sale of separate standards a source of revenue, because it hopes to make the books pay.

* * *

We believe that if the association can afford to make and publish separate breed standards that will be illustrated text books containing common sense advice on mating, breeding and the growing of young stock to produce exhibition quality, and will make these books really worth while, that the work is worth doing; but if the work is properly done, carefully done, there will not be much, if any, profit in the publication of such books. Of course such text books will not make breeders, nor will they ever prove more than slight aids to successful breeding. You can supply the best cook book ever written to a novice, but the book will not make a good cook of that novice, unless he or she possesses ability and skill and acquires experience. You can present all

Shape and color special, also 1st pullet, White Plymouth Rock, Boston, 1916. Owned and bred by W. F. Hayward, Westboro, Mass.

the written formulas for breeding that have been conceived and they will not make a successful breeder of the reader. Also we doubt if information on breeding the different varieties of fancy poultry will be obtained that is sufficiently definite to be practical. Ask any skillful breeder for advice on mating and breeding and note how vague and indefinite the answer. The breeder may know how he produces exhibition birds, but he finds difficulty in telling how he does it. And there is a reason. In our recognized Standard breeds and varieties we have many kinds of poultry. Some breeds are practically pure breeds, some are grades, some are mixtures and some are merely mongrels, when viewed by other standards of animal breeding. In mating to secure best results, each and every mating is an individual problem for the breeder. It is not alone a matter of selecting a given male to mate with certain females. You should know what is back of the proposed breeding specimens for several generations. The influence of line breeding, or the lack of it, is considerable. Ask any prominent breeder, and pin him down to actual facts, not generalities, and he will admit that the trap nest, or individ-

THE MAC KAY Colony Brooder

Shipment
Same Day
Order
Received

Save Your Chicks

It does not pay to spend the time hatching them and then lose the chicks by improper brooding. With the coal-burning MacKay Colony Brooder, you will soon save enough birds to pay for the equipment. It is the first self-regulating Brooder of its kind, the one longest in use and that has passed the real test of time.

Both Bottom and Top Drafts

And Automatically Regulated

Its bottom draft is under the grate where it belongs and with this bottom draft your fire will be kept burning in mild weather when the chicks still need the heat. A turn of thumb screw at the thermostat gives any temperature desired.

The MacKay Will Save You Time, Worry, Labor, Fuel, Chicks and Money

Write for big illustrated catalog now and please give the name of your dealer. We are prepared to make shipment the same day your order is received.

S. C. Buff Leghorns and S. C. White Leghorns—bred on separate farms from record-laying hens. Catalog free.

FRANK C. COLE

VAN WERT, OHIO

ual mating, is teaching him the value of certain individuals, as producers of quality, that he never appreciated. By individual matings he has discovered prepotency that he could not see in the specimen. Get him to go deeper into the subject and you may have him admitting that the twelve pens he has, each and every one represent not only a different breeding problem in mating for each pen, but that the several females in each pen yield him widely differing results. A mating made from the fowls in hand, without knowledge of their ancestry or relationship, must be a hit-or-miss mating and may not prove any better than any other haphazard mating. One needs to know not only the sire and dam, but the grandparents and great grandparents in order to mate intelligently. A text book may be a help, so is a love of fine quality fowls, but one must have ability, sufficient application to study the fowls as individuals, skill and experience, in order to become a successful breeder. We believe that separate breed standards could be made very desirable and interesting books, if built to conform with Nature's standard and made with a view to a reasonable degree of permanency, and if the text is prepared by competent successful breeders; but if built to agree with our present rather unsatisfactory and ever changing Standard of Perfection, which becomes out of date and obsolete at frequent periods and which is more honored in the breach than in the observance of its rules, it would appear more desirable to get the foundation set right before we begin to extend our publishing business. We would like to see separate breed standards of the right sort, but we do not believe in attempting to build such books on the shifting sands of the present "main standard." Such a foundation is not good to build on. Nor can we enthuse over books that are to be published chiefly as a source of revenue.

* * *

If we really want to help the novice and to prevent him from mongrelizing his flocks in a few seasons, then we should make a business of selling him carefully mated breeding stock and stop encouraging him to buy high-cost "new blood" to "improve" his stock; teach him to line breed instead of outcrossing every year with a new male—because a market is wanted for surplus males—and we should supply him with a natural standard in place of this artificial one, which, if its rules are strictly applied, will disqualify birds that are "priceless as breeders." We should put the prizes on quality that will reproduce itself instead of upon beauty that is for the show room only. If association members are sincere in their purpose to "uplift" the business of producing fancy poultry there is plenty of work to do. We can sell the novice birds that we know will give him good results and we can tell him how to manage them for best results. We can stop selling beautiful show specimens for breeding purposes when we would not breed such birds in our own yards. We can do lots of things that we do not do now, and we should stop doing a good many things that are now common practice; but if we are to accomplish these reforms—and I do not care to be classed with the "reformers" for such are generally among the biggest fakirs in any business—we will have to divorce fancy poultry breeding from fancy poultry

commercialism. Just now commercialism appears to be rampant in our international poultry association, which is supported thru exploiting itself to secure new members and thru the sale of its publications.

* * *

We have no quarrel with commercialism when it is honest, when it is legitimate business and admits it. The kind that disgusts us is the commercialism that parades abroad under the cloak of sportsmanship and fanciership—like a wolf in sheep's clothing—and pretends to extend the helping right hand of fellowship while its left hand picks your pocket; the sort of business that abuses and condemns a competitor for acts and methods that it has used, and continues to use, itself.

* * *

If the appeal, which has gone out for data, information, special articles, etc., for the proposed new separate breed standards, meets with ready response, there should be sufficient material collected to make each breed book considerably larger than the present "main standard" for all recognized breeds and there should be plenty of matter left over to keep a few poultry journals supplied with copy for quite a long while.

* * *

It is interesting to observe that an experienced and skillful breeder can take either a pullet or cockerel bred line of breeding stock and in a few years of careful mating and selection produce therefrom stock that will yield good quality specimens of both sexes. It has also been noted in Africa and India, where white poultry fanciers come in contact with the native poultry keepers, that the whites can take the small scrubby native chickens and soon breed them into better size, uniformity, better quality and greater production, bringing about a standardization of the flock; yet if these better birds, developed by the whites, are returned to the natives degeneration is rapid and in a few seasons the young stock is small and scrubby and no better than when first obtained by the whites. We do not need to go quite so far afield to note similar conditions, for in many cases this is what happens when a specialty breeders sells good stock to a novice. The novice can remedy the matter by study and acquiring experience and skill.

* * *

Not long ago a well established specialty breeder stated that he made his start with a small flock of imported stock, to which he added during the first season by purchase of more good stock and eggs for hatching. Thereafter for more than 30 years he bred that stock without the introduction of new blood; would not introduce new blood because it would temporarily upset his whole line of breeding. He bred to a personal ideal of evolution in the natural beauty of his variety and without regard to rules and laws of a shifting standard. He was and is successful as a breeder and exhibitor and has produced a strain wherein his matings give him not over 3 per cent of cull specimens. A small breeder starting with a foundation of such stock, and possessing intelligence and experience in breeding, would need no other—barring losses or accidents which could be remedied by purchases from the original strain—and would find it unwise, and attended by considerable risk, to introduce new and unrelated blood.

Reply to Reliable Poultry Journal's "Unregenerate Editor"

As Grab-Much Curtis Has Favored My "Open Letter" with Five Pages of Advertising, I Do Not Wish to Appear Ungrateful; Therefore This Reply in the Manner of the Illustrious Dictator. But, Thank Goodness, No One Can Hope to Imitate His "Arizona Kicker" Style.

By Prince T. Woods, M. D.

YOUR MAJESTY:

I note that your own faithful "Dick" and "Teddy" rushed to your royal protection with my "generally foolish Open Letter," as you term it. Note also that you devote *five* of your valuable (?) pages to this letter and your reply, which I assume is intended in a "foolish" vein. If proof were needed of your majesty's dictatorship, the letters of Messrs. Richards and Campbell should be sufficient. The letters I have read all bear the earmarks of private ownership.

Well, thanks for an evening's amuse-

ment and hilarity. I don't know when the whole family have had so much ridiculous nonsense to laugh at in a long time as that you furnish in your March issue. And, yet, Potent Emperor, my open letter was not so "foolish" as it

may seem to you; since many people have written me very complimentary letters about it. No doubt it all seems strange to you, for, 'tis said, Emperors seldom hear the truth from those about them. You owe me that "walking stick" with your insignia for a head, which you so kindly offer on page 82 of your March number. I have many more than the half-dozen letters you mention, and if you will come here to Silver Lake, we will put on our gas masks, endure the fumes of sulphur, and show you the

when I smoked up the burrow, and now, as always when a poultryman does likewise, the whole neighborhood has the scent.

As to the "pointed eggs": oh, Most High and Learned One, do your faithful "yellow dogs" always serve you with round eggs only, or do you now and then find an egg more pointed than your pithy sayings? Keeping just ordinary useful Standardbreds, we get a considerable percentage of pointed eggs, which we find quite as useful as those which are as round and blooming as a certain cra-

View on the poultry farm of J. C. Fishel & Son, Hope, Ind., breeders of White Wyandottes.

ment and hilarity. I don't know when the whole family have had so much ridiculous nonsense to laugh at in a long time as that you furnish in your March issue. And, yet, Potent Emperor, my open letter was not so "foolish" as it

originals that you may see the proof for yourself. Am glad, indeed, to see the avalanche of wrath turned away from helpless victims, even tho you have headed it in my direction. I knew full well what kind of an animal was inside

nium, which I could name but will not.

Why did the *American Fancier* print my open letter? Well, I believe that they approved of it. They said so, and had a large number of complimentary letters, so I was told. Why did AMERICAN POULTRY JOURNAL not use it? Ask our make-up man. It was in type but got crowded out at the last moment along with about 20 galleys of other matter we intended to use. We are not so hard up for matter to fill up with as some appear to be.

As to our motive? That was an honest one,—a hope that you, Great Mighty Colossus, might see the error of your way and stop your fulsome tirades about poultrymen who do not think as you do, but who are probably quite as honest and desirable. If the tide of your majestic wrath can be turned my way but for a moment, it may help the poor devils you abuse and it won't hurt me; for I listened to it for so many years that I became used to your ranting and miss the soft music of your lithesome voice,—albeit it has been a good and most satisfactory miss.

Name one large advertiser who should be classed with those so-called "hucksters?" Sure, Glistening One, whom should I name but your Great Self? Surely in all time, there never has been

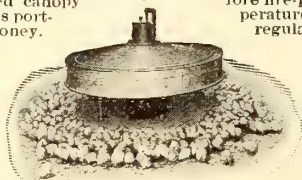

MODEL BROODERS Raise Vigorous Chicks

THE best incubator will not save you from failure if your brooder isn't right. Give your chicks a chance to live, thrive and grow. Help them over the critical first three weeks—your success is then practically assured. Model Brooders are recognized as standard for Efficiency, Safety and Reliability. The low prices and their insignificant upkeep cost will astonish you.

Model Coal-Burning Hover, Only \$15

Never before has such an offer been heard of. All cast iron—will last for years. Fire fed evenly and continually from magazine. Perfect combustion—self regulating—self cleaning. Absolutely spark-tight and gas-proof. Combination checking and ventilating draft. Easily accessible—cone shaped canopy raised on furnished pulley. It's portable. Saves time, care and money.

Write for 128-page New Poultry Book, "First Aid to Poultry Keepers." Money-saving information—pointers to successful breeders; advice for beginners. Now ready. Write today for your copy—it's FREE.

Oil-Burning Chick Comfort Hover \$8.50

The most perfect portable hover ever offered regardless of price. Highest heating power of any hover on the market today. Takes less oil and less care than any other. All metal—thence, fire-proof, absolutely. Even temperature. Automatic ventilation and regulation. Easiest to clean; patented lamp; draws out—no kneeling to clean. Chicks are SAFE at all times; no corners to crowd into.

P. C. BIGELOW, Box A, Medina, Ohio

a Greater "Huckster," and as a large and constant advertiser you have out-huckstered them all. What has been your business for years in stock and eggs but a "huckstering" business? How many buyers, in more than one line, have clamored for delivery of the goods or their money back? And some beautiful time they had of it before they got it. How many breeders who sold your interests, stock and eggs, had to clamor for their pay and threaten suit to get it? It is but a short time since I heard mention of such a complaint, and at one time I heard many,—that should be well known to you, for there was one case you bid me never to mention to you again.

"Don't generalize, insinuate," etc., you say, why, Most Fragrant Sultan, I but took the cue from you. It has been your way for a long time. I don't quibble more than myself in these matters, and, if I mention no names here, it should be understood that it is because I have no wish to violate the confidence of those who have written me. As I am not versed in the usages of the court—and know the harem not at all—oh, Ruler of the Faithful, you will have to pardon my seeming unwillingness to obey your suggestion that I drag into your net worthy poultrymen so that you may "flay them alive" and then with "cord and sack" do injury to their business and their reputation. I hope that we will not see any more such elevating examples of your methods as the Harrison-Penick lengthy tirades, which I trust soon end. Untaught, as I may be and do confess, in intrigue in such a court as yours, I do not fancy putting my words into the mouths of others or of advertisers—as seems to be your way—with a rule in effect that if they object to being so quoted they place themselves in line for a public "bawling out" and business ruin in-so-far as the Great Sultan's edict carries. I had rather dig in the trenches, at an enlisted man's wage, than be a so-called "leader" on whom people fawn, smirk, and flatter because unless they do so they risk injury in reputation and purse. Use the unretouched looking glass of truth, oh, Napoleonic Sultan. If the American Poultry Association wishes to save itself from ridicule and perhaps a poultry St. Helena, the best thing it could do would be to give you the alternative of resigning from its committees or else behaving like a reasonable, rational human being, instead of like a spoiled and naughty boy, who insists on having his own way regardless of consequences.

As for the Golden Rule Farm, which you have written up in many ways; by your own testimony the proprietor has done much good in his home community. Your Mr. Fry's story shows that Mr. Berry, whom you attacked with no visible excuse, has done and is doing a great and good work for better poultry throughout the countryside about his home; *helping to put dollars into the pockets of the poultrymen about him.* I wonder, great little Napoleon of Poultrydom, (seventh reincarnation, I believe you said it was) just how you would stack up if measured with the same stick?

Do I approve of "hucksters?" Most certainly I do of some, for I know some "hucksters" and the condemned "big string men" who are good fanciers, good judges and breeders of pure bred poultry and who are honest men and women. I would not condemn or besmirch all, because a few do not do as I think they should. I don't think that you, Great

S. C. Buff Orpingtons

For the past five years "Sunset Strain" Buff Orpingtons have proven their worth, both in the show room and as winter layers of large eggs, therefore I can safely say that in all New England, no matter what you buy, you can buy none better. I do not advertise as heavily as some of the other breeders, but I do give you 100 cents worth of value for every dollar you send me.

When you buy chicks or eggs from me, you buy from one of 12 pens with a record behind them. These pens are mated from birds that have type and color, together with laying qualities. If you have tried the other Buff Orpington strains, try the "Sunset Strain"—then you will be satisfied.

My birds are bred to make good. They do for me and they will do the same for you. Therefore don't put it off, but send for our mating list and prices right now. Never put off till tomorrow what you can do today.

Yours truly, H. H. JOHNSON.

THE M. M. JOHNSON CO., Clay Center, Neb.

J. G. Oelke, Raspeburg, Md., writes: "Am using the Old Trusty now four years and it is just as good as the day I received it. Am well pleased. Have hatched about 2000 chicks with it and can honestly say that I haven't lost 30 chicks in the four years."

Just one of the 650,000 satisfied owners of Old Trusty, Reader. Let me

M. M. JOHNSON
Inventor of
Old Trusty

Muckraker, are sufficiently free from sin to cast the first stone. Some of these people you seek to condemn as a class have done much for poultry culture, they have as good a right to live and do business as anyone, so long as they keep within the law of the land. I am not aware that the American Poultry Association, or Grab Much Curtis, has any right to do police duty in the poultry business or to assume the power of judge and jury. I do not recall that I have seen any of those I know among "hucksters," "string men," "day-old hatcheries," small breeders or non-advertisers, listed in the U. S. Government Weekly News Letter as being fined for adulteration, misbranding, and short measure; but I did read a certain report in the issue of Sept. 22, 1915.

And now, Majestic Dictator, where do you or the American Poultry Association get any authority to investigate poultry plants or anybody? By what right do you assume such authority and attempt to dictate how another—a competitor, if you please—shall manage and conduct his business? You know you have no legal right; even the State Experiment Stations under government management have no right to investigate farms or poultry except by invitation of the proprietors. Why should you make the American Poultry Association a laughing stock with your silly monkey tricks, calculated to befuddle those who are afraid you will "flay" them in your publications? How about the birds you are now, in 1916, advertising as "champion layers" and "world's best pens" on your farm? I have no quarrel with those or similar statements if you do not abuse others for doing the same thing. "Jealousy?" Please tell me what on earth there is to be jealous of or about? I don't care what you say or do; if you will only let other people alone, you can hammer away at me for the rest of your natural life; but it does make me weary to see you lambasting others for the very things you do yourself.

With your two papers you could do a great and good work, but it appears that you would rather make a row if you cannot have everything your own way. One has only to review the files of your papers to see that you have alternately praised and abused a good many people prominent in the poultry world. I have not forgotten how Philo was "exposed" and abused; how you visited him and saw the "dollar bills in bushel baskets" until your mouth watered and the drool ran out at the corners. And was it or was it not a chance at those same dollars that caused you to reverse yourself and fill your papers with praise of the very man you had flayed and lambasted? How about that one-time big advertiser in the West who is now getting so many bouquets; what is the reason for the flattery? Did he "come across?" Why, besides my humble self, did so many men leave you? Men who bear names well known in poultrydom: Curtiss, Cyphers,

Wheeler's Royal White Wyandottes and R. C. White Leghorns

Hare, Hale, Hewes, Pollard, Park, Pro-
ctor, Sullivan, Smith and dozens of others
whom I could name and will not.

But I don't own two papers. I'm only
an employee. I have some regard for my
readers and my publishers and I here
apologize to them for wasting so much
space on a reply to you. I cannot give you
all the pages you gave me—a "hand-
some" portrait from a condemned proof
of ten years gone by—and all that.
Thanks for the advertising just the
same. Keep right on with the good
work, my shoulders are broad and my
appetite husky—it is better to pepper
me with your bird shot than to ruin some
poor fellow's business and living.

As to American Poultry Association
advertising don't blame me. I should not
have had much to say if you and others
had not forced the American Poultry
Association into assuming a virtue it
needs but has not yet acquired. I took
a try at correction of American Poultry
Association misleading ads quite a while
ago, when the first spasm of virtue be-
gan to dawn in the association. Don't
blame me because others did not follow
when we lead. See following extracts
from 1914 AMERICAN POULTRY JOURNAL
editorials:

The American Poultry Association in its
own advertisement, and referring to itself,
says: "On its shoulders rest this gigantic Bil-
lion-Dollar Industry"; also the ad read, "The
Standard of Perfection is the official guide for
the breeding, mating and judging of all poul-
try."

Yet a prominent American Poultry Associa-
tion official advertises his variety like this:
"The _____ are the Standard by which
all other _____ are judged."

Try to reconcile the censoring committee and
the statements in last two paragraphs. May-
be censoring, like charity, should begin at
home.

(From editorial "Censoring Advertis-
ing" May, 1914, AMERICAN POULTRY
JOURNAL.)

It is all nonsense to prate of the "Billion-
Dollar Industry" resting on the shoulders of
the American Poultry Association. It does not
and never did. The statistics, from which the
estimated "Billion-Dollar Poultry Industry"
has been presumed, consider chiefly eggs and
poultry (meat and eggs) in market channels
and on farms. Of the 6,000 or more American
Poultry Association members comparatively
few have any noteworthy representation in the
statistics and there are vast multitudes of
poultry keepers outside the association (who
know next to nothing about it, or its objects)
who have more to do with the makeup of the
"Billion-Dollar Industry." Instead of swelling
up like a big frog in a small puddle and imagin-
ing that it controls the world, which to the
frog is confined to the puddle, why not make
some real effort to get out into the great
nation-wide field and to help and interest all
poultrymen. Don't build a spite fence about
the American Poultry Association puddle and
charge admission. Extend interest, promote
helpful poultry work everywhere, provide re-
wards of merit for every earnest poultryman in
the nation, inspire poultrymen, and particularly
members, with the desire to help, befriend and
encourage all other poultry keepers.

(From editorial "Narrow Law for
'Helpful' Association," July, 1914, AMER-
ICAN POULTRY JOURNAL.)

UNITED STATES POST OFFICE

LANARK, CARROLL CO., ILL.

March 7, 1916.

Dear Mr. Bean:

Last season we bought one of your
\$10 Single Comb settings and had
good success. We raised two cocker-
els and three pullets. One of the
cockerels was only fair. The other
scored 94 and the pullets 96, 94½
and 93½ by Judge Chas. McClave at our
recent show. I doubt if this 96-point
pullet has an equal in the U. S.

I am inclosing my check, etc.

(Signed) J. A. SHANER.

The Poultry "Hucksters" and Hatcheries

Not a Defense, But a Clear Statement
of Conditions and the Probable Cause
for Unjust Editorial Muckraking

THE title of Shakespeare's well known play, "Much Ado About Nothing," would be a very appropriate heading for the many pages of editorial comment devoted to the so-called "Huckster" and "Huckster Hatcheries," which have been appearing in the columns of poultry papers controlled by a man who has attempted to dictate the policy of the American Poultry Association for the past 15 or 20 years and who has succeeded in his attempts thru various methods, acting in different roles, from the weeping whipped child who wants to resign because he can't have his way, to the Czar who towers above his subjects with a lash in one hand and a fire brand in the other, crying, "Unless you do as I bid, I shall brand you a faker. My publications give me the power to do so and if I look far enough into your personal business, I will find some little ledge on which to hang and cry unto the world that you are a crook."

By these tactics he has succeeded in silencing those who would otherwise raise up and publicly revolt. We have seen letters written to honest poultrymen advising them that unless they do certain things they would receive the same treatment as those who have been lambasted and flayed.

It has been the policy of AMERICAN POULTRY JOURNAL to devote its columns to the interest of the poultry industry, to stimulate the poultry business and insure a square deal to our readers by guaranteeing our advertisers and eliminating the advertisements of breeders whom we distrusted. No comment has been made on the articles appearing in the papers referred to above, simply because controversies of this kind tend to hurt the poultry business to a greater extent than anything else could and we were under the impression that a little sanity would be shown by the publishers of these articles after the first violent attacks and that they would use their columns to better advantage.

It has reached a point, however, where we are called upon by our many subscribers to express our views and we will attempt to comply with this article, which we hope will be taken in the sense in which it is written.

We have no personal animosity toward the little Czar, no bone to pick and no one to defend. The advertisement of the first victim of this muckraking policy of our contemporary does not appear in this issue of AMERICAN POULTRY JOURNAL, not because we have found him fraudulent, but because he was

financially ruined by the publicity received regarding the matter in which the little Czar himself was not upheld by the American Poultry Association, altho he appealed three different times.

Is it any wonder that other breeders will cower and say, "Yes, my Lord, I shall not offend you, I shall not take my ad out of your paper, I shall increase my space—only please, dear Lord, do not flay me, for I want to live." Is it any wonder that another will say, "I am sending you under separate cover an advertisement to commence in your next issue and to continue until forbid," or words to that effect.

At the last meeting of the American Poultry Association in San Francisco a resolution was presented by Mr. Grant M. Curtis and adopted by the association appointing a committee of three to investigate the business methods and censor the advertising of any poultryman they see fit.

The committee was appointed and consists of E. E. Richards, President of the American Poultry Association, Grant M. Curtis, and Frank L. Platt (we understand that the latter has resigned). The association assumes the right to appoint these men to investigate the business methods of an individual and censor same. Just think what this means.

Gentle reader, suppose this committee entered your place of business and said, "Mr. —, we demand to see your books, how much money do you take in, how much money do you spend for advertising, let us see your stock, how many buildings have you, etc.," you

Wisconsin Wins in big Hatching Contests Every Year

Year after year, these unbeatable Wisconsins have proved their superiority over all other machines regardless of price. Below are a few of the record breaking hatches taken off by owners of this famous Wisconsin \$10 outfit.

30 Days' Trial — 10 Years Guarantee
— Money Back if not Satisfied

1st Year

Mrs. J. McMahon, Veedersburg, Ind., won in Missouri Valley Farmer Hatching Contest, hatching 125 chicks from 125 eggs.

2nd Year

Mrs. C. B. Armitage, Atwater, O., won in the Successful Farming Contest, getting 181 chicks from 181 eggs in two hatches.

3rd Year

Mrs. J. W. Mize, Vaughans Mills, Ky., won in the Successful Farming Contest, hatching 208 chicks from 208 eggs, 2 settings.

4th Year

Mr. F. H. Lewis, Montrose, Pa., won in Successful Farming Contest, getting 96 chicks from 96 eggs in one setting.

5th Year

Mrs. C. C. Rich, Russellville, Ind., won in the Successful Farming Hatching Contest, getting 94 chicks from 94 eggs—the first hatch she ever made.

These records prove beyond a doubt you can't get bigger, better hatches even if you pay twice the price. So why pay more?

Why Take Chances? Find Out What an Incubator is Made of Before You Buy. Send for Our Free Catalog and We Will Send You a Sample of the Material Used in Our INCUBATORS and BROODERS

Then you will know which machines are built best, which will last longest and which will give you the most value for your money. It pays to investigate before you buy. For example: Wisconsin Incubators have double walls—the outer wall is of California Redwood and the inner wall is of insulating board with dead air space between the walls. Hot water heat—double glass doors—copper tank and boiler—self-regulating. Roomy nursery under egg tray. Incubator is finished in its natural color showing the high grade California Redwood lumber used—not painted to cover up inferior material. Both machines shipped complete with thermometers, lamps, egg tester and book of directions; all set up ready for use when you get them, freight paid east of the Rockies.

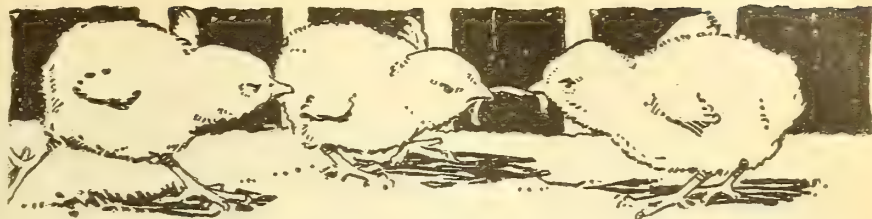

Order Direct from this Advertisement You can send in your order direct if you wish and save time. I give 30 days' trial with the understanding that if you are not perfectly satisfied write me—send the goods back and I'll return your money and pay all freight charges. I have been advertising in this paper for years. The publishers know me and know I do just as I agree. You take no risk. One good hatch will pay for the Wisconsin and more. Don't buy any other until you get our catalog. Send TODAY. Address

WISCONSIN INCUBATOR COMPANY, Box 52, RACINE, WIS.

(5)

would say, "It's none of your business"—that would settle it; but, dear reader, were you a big breeder and would give this answer, you would undoubtedly find yourself a victim of the lash of editorial comment.

What right has an individual or an unchartered association (such as the American Poultry Association is) to intrude upon poultrymen who are not even members of the American Poultry Association, simply because such poultrymen do not advertise extensively in poultry papers. Of course, the resolution does not say that the committee shall only investigate the business methods of breeders who do not advertise in certain poultry papers and we would not assume that only those breeders who do not advertise in those poultry papers would be investigated, but it would lie in the power of the committee to attempt to investigate only those breeders, were the association legally authorized to extend such a power, but thanks to our Creator, the American Poultry Association has no more right to grant that

Another Argument for

H-O Steam-Cooked Chick Feed

"WE have used a large amount of H-O Steam-Cooked Chick Feed; in fact, we have raised all our chickens this year with H-O Feeds, and find them entirely satisfactory for growing chicks from shell to maturity."

"E. P. F.", Hunts, N. Y.

The reason H-O Steam-Cooked Chick Feed brings results is because the littlest chicks can digest it. It thus removes the greatest danger in poultry raising and cuts out the loss resulting from dead chicks.

The grain elements of H-O Steam-Cooked Chick Feed are combined by experts in the proportion needed to build tissue and make healthy chicks. The feed is then *steam-cooked*. This makes the grains more digestible, and by eliminating excess moisture, prevents souring of the grain. For this reason H-O Steam-Cooked Chick-Feed prevents the frequent digestive troubles of little chicks.

Try H-O Steam-Cooked Chick Feed and see for yourself if it doesn't pay.

Write for sample, prices and descriptive booklet.

THE H-O COMPANY

power than they have of appointing a committee with the power to investigate and censor the acts of the president of our great country.

We have drifted away from the original matter which was to be discussed in this article, namely, the so-called "Huckster." In the first place the term "Huckster" is entirely inappropriate and is a word which is being misused in the various editorials referred to above. The very learned and illustrious editor has entirely overlooked the fact that according to Webster a "Huckster" is a dealer in small articles, one dealing in petty bargains, etc. In an article describing one of the so-called "Huckster" Hatcheries, he states that one of these hatcheries shipped the enormous number of 700,000 chicks in one season. This can hardly be called a petty business, altho we are willing to admit that Baby Chicks are "small articles."

The so-called "Huckster" in the poultry business is no more or less than a jobber or dealer in poultry; that is, a man who buys birds from another man who raises them, and then sells them again thru his own efforts by advertising.

Barred Plymouth Rocks

BUY your exhibition and breeding eggs from a firm that has been in the business for 25 years. No matter what you pay, no one can furnish you superior quality than we can. 34 Premiums at the Ky. State Fair and Louisville Show this past season, prove the quality of "Pope Strains."

Great Armory Show, Louisville, Ky., Nov., 1915

5 Firsts; 6 Seconds; 4 Thirds; 1 Fourth; 2 Fifths and the Grand Trophy for Best Barred Plymouth Rocks

Kentucky State Fair, September, 1915

4 Firsts; 2 Seconds; 2 Thirds; 1 Fourth; 3 Fifths

We supply cockerel and pullet bred eggs from the best winners we have and when you buy eggs from us you get the best in America to-day. Our quality is wonderful, yet our prices are the lowest of any of the big breeders. You will make a great mistake if you purchase before getting our mating list and catalogue. Send for catalogue No. 3.

MORE EGGS
BETTER THAN OYSTER SHELLS
LESS COST

A view of some of the open air poultry houses on Rock Ledge Farm, Southboro, Mass.

The average "Huckster" shuns the poultry papers. He advertises in farm papers and in magazines, thereby reaching a class of people who do not know what the Standard perfections of a prize winning bird are, and a good many of them do not even know there is such a thing as a poultry show or a poultry paper. The "Huckster" publishes a catalog in which he shows pictures of the various varieties of poultry—the prospective customer takes a liking to a certain variety—the prices are very low and he sends in his order, which is promptly filled by the "Huckster," which ends the transaction. Where is any fraud committed? What right has an editor to try and call such people frauds when he himself is connected with a company which deals in poultry in like manner thru its chain of stores that demand higher prices than these poultry "Hucksters?"

This "reform" movement on the part of the gentleman referred to reminds us of the old chestnut about the prohibitionist leader who carries a "loaded"

cane or a flask in his hind pocket and also the well known saying "people living in glass houses should not throw stones."

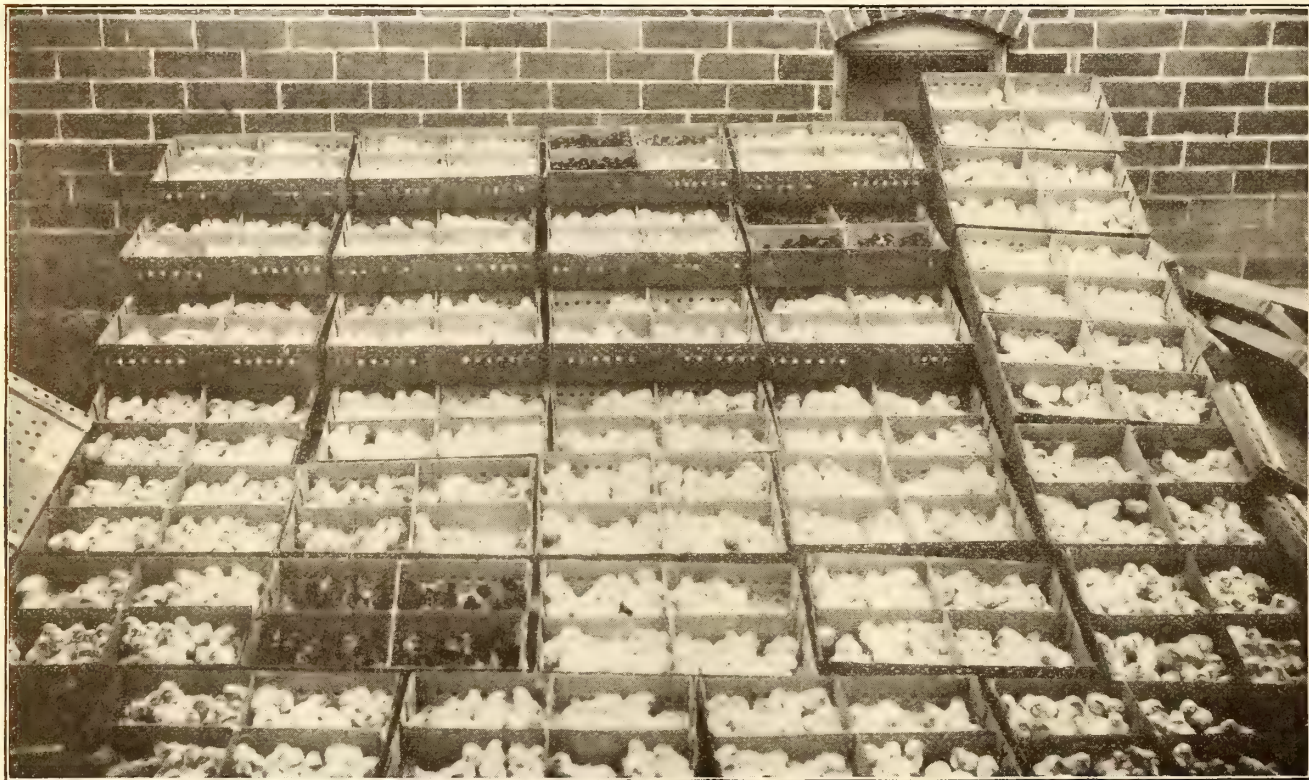

We do not wish to convey the idea that the man referred to is not dealing honestly by selling such birds in his chain of stores. In fact, that is honest business, but he is not honest with his subscribers and readers, when he tells them that the other fellow is doing a dishonest business along the same lines.

If you send \$2.00 or \$3.00 for a bird of a certain breed, what do you care whether that bird was raised on a certain track of land belonging to the party from whom you bought the bird or whether he was raised three miles from that place, as long as the bird was of the variety you desired and fulfilled the requirements of your order. The so-called "Huckster" does not tell you that he is selling you prize winning stock. He sells you stock of a certain breed and not exhibition quality.

It would be a nice state of affairs if every milk dealer would be obliged to

own his herd of cows, if every dealer in merchandizing would have to own his factory to manufacture the various articles he sells, etc. When you purchase merchandise of any kind you do not care where the goods are manufactured as long as it meets with your requirements. If you purchase a horse you do not care where he was bred and raised, you do not care what herd of cows the milk for your breakfast table comes from as long as it is rich and pure; then why should poultry be an exception, unless you are buying for exhibition purposes or buying birds which have won the ribbons at certain poultry shows. Such birds are sold by specialty breeders and not by the poultry "Huckster."

We do not in any way mean to place the "Huckster," or, rather the jobber or dealer in poultry, on a pedestal or to place a halo on his head, but the many attacks which have been launched against these dealers has caused a certain feeling of distrust in the eyes of many people who were contemplating entering

Part of a shipment of 3,600 chicks shipped to Wisconsin in 1915 by The Uhl Hatchery, New Washington, Ohio. This large shipment arrived in splendid condition and not a dead chick in the lot.

the poultry business and the result is that they have kept away rather than take chances of falling a victim of such unscrupulous frauds as those who sell Wyandottes for Wyandottes, Plymouth Rocks for Plymouth Rocks, Leghorns for Leghorns, Orpingtons for Orpingtons, Minorcas for Minorcas, etc., etc., and to think that they don't even raise the birds on their own place.

It has been charged that these jobbers have harmed the fancy poultry business. How? By furnishing fair stock at fair prices? By supplying the wants of the beginner who could not afford to pay more? Or by not advertising heavily in poultry papers? Surely there is no harm in supplying fair stock at fair prices. True, a few of the people who bought would have bought better stock if they could not get any other, but a good many more would have backed down and would not be counted among the breeders of today.

It is a well known fact that the average man starting in the poultry business wants to do a little experimenting. He wants birds of a certain variety at the lowest possible price and he improves the quality of his stock by purchasing better birds from a specialty breeder. Therefore, instead of being a detriment to the industry, these dealers in poultry are in reality an asset, inasmuch as they get the people started in the business. So much for the poultry "Huckster." We have stated the facts just as they appear to us and you can draw your own conclusions. As to the "Huckster Hatcheries," this misnomer has been given to institutions operating Mammoth Hatching machines or many large incubators. They purchase eggs (usually under contract) from various breeders of certain varieties of poultry in their vicinity. Each variety is kept separate. The chicks are hatched and sold without "pedigree," but true to variety. What crime is committed? Why should a legitimate business as that be condemned simply because an editor is interested in manufacturing smaller incubators, any more than the "Huckster" should be condemned by an editor who himself causes various varieties of poultry to be sold by a firm of which he is the financial head?

The publishers of AMERICAN POULTRY JOURNAL take pride in the fact that its columns are clean and free from personal grievances, but we believe it time to call a halt to the muckraking methods employed for personal gain and personal glorification of the self styled "Seventh Reincarnation of Napoleon."

(Extract from the Chicago Evening American, March 15, 1916.)

FEW KNOCKS AT THE KNOCKER.

If you are a man without faults, perhaps you have a right to shy rocks at the glass house of the other fellow.

But we never knew such a man, and you are no exception.

Getting down to brass tacks, what comfort can you get from knocking?

It won't be peace of mind: that much is dead sure.

What is there in this world which will take the place of the comfortable feeling that you have given every man the square deal?

The man who gets the most out of life is the one who puts the most into it. It may be money; it may be good-will; but you reap what you sow.

The one who can look every other man squarely in the eye and feel and do right by his fellows is the one who has the good, wholesome smile.

Envy is almost always at the bottom of the "knocker's rap."

Give up knocking and cultivate peace of mind.

Our Breeders ^{are} in Full Lay

Horticulture for Poultry Keepers

Conducted by Thos. F. Rigg, Iowa Falls, Iowa.

WE ARE still in Florida and enjoying every minute of the time. This week the county fair has been a big and very interesting attraction. The display of citrus fruits is the best I have ever seen. The display which most interests me is that made by the school canning clubs of the county. In this I find the children have to show all vegetables grown here, and also jellies, preserves, marmalades, etc. The thousands of visitors from the North are buying these jellies, etc., and prize them very highly. This suggests the thought that the vegetable and fruit growers in this

country are neglecting to take full advantage of this opportunity. It does seem that here in Miami, there should be a large canning factory to take care of the surplus crop and thus convert it into money. The school girls who prepared all the goods shown in the display were grouped in front of the booth one day of the week. As I looked upon them and their handiwork, I said to Mrs. Rigg: "I wish Mrs. Woods of the A. P. J. staff was here, for what a human interest story she could make out of all this."

There are several hundred head of

Standardbred fowls in the exhibition. I have been attending the fair each season for six years, and have noted a great improvement each year in the quality of the stock shown. This season I found some magnificent specimens in Barred Rocks, White Leghorns, Black Langshans and Rose and Single Comb Black Minorcas. In all it was a very creditable exhibit. The breeders here are nearly all men who have recently come from the North and knowing what good stock is, propose to have that kind only.

* * *

I am interested in Florida and seeing your kind offer in American Poultry Journal, I am writing you.

A local firm who seem reliable have some land near Pensacola—about eight to ten miles north of that city. They say it is high and dry and good growing land, also good for poultry.

Now since there is lots of poor land in Florida and as I am now situated, it will be impossible for me to go and see the land now. Do you think it would be advisable for a man to invest in ten acres there with intention of having a poultry and fruit farm.

I have a fine flock of pullets here and have been very successful raising chickens and vegetables.

Any information as to the locality mentioned or the market conditions will be gladly received,
Fred C. Rogers,
Michigan.

I want to strongly advise Mr. Rogers not to buy land north of Pensacola for the purpose he desires land. That section of the state is subject to frost and a fruit crop there is very uncertain. This season has again shown us pretty conclusively that the frost line in Florida is not far from the Miami river. During February there was some pretty cold weather down here. There were several killing frosts in the central part of the state and a freeze in the north section of the state. Of course the fruits and vegetables in those sections were injured and in some cases destroyed. Yet the northern papers are carrying advertisements of lands for sale in those parts of the state, the promoters stating that it is a safe and profitable business growing vegetables and fruits on these lands. Year after year frosts visit those sections of the state, but the dishonest land promoters keep up their selling campaigns. And they are annually ruining a large number of Northern people, who invest in these lands. It is a great pity that our government does not go after these promoters. Even here in Dade County, where frost has never yet injured the fruit crop, but has done much damage to the vegetables, the growers kept their overhead spray system going for several nights, as there was every reason to believe frost would

The old
back-breaking
way?

OR

The easy
Planet Jr
way?

The Planet Jr way takes the drudgery out of labor, and produces bigger, better crops. Planet Jr tools are the greatest time-savers ever invented for farm or garden, and the most economical cultivating tools you can use.

No. 4 Planet Jr Combined Hill and Drill Seeder, Wheel-Hoe, Cultivator and Plow pays for itself in a single season in the family garden as well as in larger acreage. Sows all garden seeds (in drills or hills), plows, opens furrows and covers them, hoes and cultivates easily and thoroughly all through the season. We make 32 styles of seed-drills and wheel hoes—various prices.

Fire-Fly Garden Plow is especially useful to owners of small gardens, and to chicken-raisers for plowing up scratching-yards. Its light weight makes it easy for man, woman, or boy to use. Enables the owner of a family garden to do all the work in spare minutes.

fall. The thermometer got down to 43 degrees. Fortunately nothing was injured, but it gave the growers a scare. I want to again warn readers of the A. P. J. to make a thoro investigation of Florida lands and conditions before investing dollar in land here.

* * *

I had the pleasure the other day of meeting A. T. Fort, of Mt. Airy, Ga. Mr. Fort is the originator of the Fort seedling apple, which was awarded the first prize as the best apple grown in the South, at the National Apple Show in 1914. Mr. Fort is adding to his apple orchard in Rabun County, Georgia, and will have about 150 acres in all. He has demonstrated that sweet cherries can be commercially grown in the Georgia mountain land. I have asked Mr. Fort to give me an article telling of his work as a pioneer orchardist in his state and the same will be given to A. P. J. readers in this department.

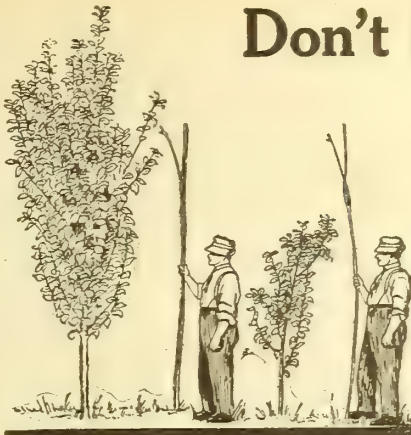

* * *

In a letter received from Dr. Prince T. Woods is the following:

"Note the trouble that Florida truck growers have to get potash. I don't know the conditions on Florida coast, but I always supposed that kelp, gulweed and other sea weeds were plenty in tropic seas. If so should think that some enterprising American would get busy. Sea weed will put potash into the soil if it is used plain as fertilizer. If it is properly prepared it will yield a lot of cheap potash. Here in our Plymouth county sand the early settlers learned from the Indians to use fish (raw cod, hake, herring, etc.) and kelp and other sea weed for fertilizer and it works well to this day. Even so, thousands of dollars worth of this sort of fertilizer is wasted every year on the Massachusetts coast and allowed to rot and stink up the beach. In Rhode Island the farms were laid out on the Sakonnet river with just so much salt water river front each, because in those early days the privilege of collecting sea weed for fertilizer was considered a valuable farm asset. We learn slowly in this world. Yet, on the Pacific coast cheap potash is now being extracted from seaweed and there is probability that the industry may develop now German supply is cut off."

Yes, "we learn slowly in this world." This statement is verified here every day. Thousands upon thousands of tons of seaweed are washed ashore every day and it is left to decay upon the sands. I have seen but few instances where this valuable fertilizer was being saved. It is a shame that this great waste is allowed to be. On every hand I see grape fruit and orange groves suffering for an application of potash while here on the shore of the ocean tons upon tons of seaweed, rich in the very element the trees are needing, is being wasted without a thought as to its value. Not only this, a large amount of fish which is not fit for human consumption, is brought in each day by the thousands of visitors who go to the ocean fishing grounds. These fish, such as sharks, porpoises and the like, are exhibited by the successful fishermen at the wharf for a few hours, when along comes the city health department boat, which carries these fish out to sea and drops them. This means that each day several tons of valuable fertilizer is being wasted. You ask why will the fruit and vegetable growers here pay the high price for fertilizers and at the same time allow to go to waste this vast amount which they could easily obtain. I cannot answer that question here because the words I would use are not the kind admitted in the columns of the AMERICAN POULTRY JOURNAL. I suppose in time the seaweed and the fish here will be used by the farmers, as they should be used. If this were the only waste going on, for which the farmers

Don't Pot Your Trees

Drawn from actual photo.—Note marked difference in growth between tree planted in blasted hole and tree planted in spade-dug hole.

Practical Proofs

E. J. BARKER, Beech Bluff, Tenn., says: "I would not set trees without first subsoiling with explosives, even if it cost four times the amount."

J. C. SAYLOR, Penna., says: "Blasted trees the finest in the orchard."

O. C. LANGFIELD, Calif., says: "Planted 14,000 trees with dynamite—advanced value of land from \$15 to \$200 per acre in less than a year."

Spade-dug holes, like pots, confine and cramp the roots. Set your trees out in blasted holes. Stop the big percentage of early losses. Make them grow sturdy, hearty and fast. Cash in on your investment quicker by getting earlier yields.

Red Cross Farm Powder

lightens labor and increases profits. It loosens the earth, makes better rootage and provides increased nourishment for young trees. It rejuvenates old trees and makes them bear.

THE HINDE & DAUCH PAPER COMPANY
177 DECATUR STREET SANDUSKY, OHIO

of the country are responsible, the case would demand more attention. But the Northern farmer is as wasteful as his Florida brother, in his own way. I was out riding the other day and saw something which really annoyed me. It is foolish to become annoyed at anything in this world, and doubly so when one has no way of setting things right. We were passing by a large vegetable farm. The grower had finished picking the beans on a five-acre tract. He raked the vines to one corner of the field, pulling them off the cultivated land, and deliberately set fire to them. How I did itch to get out of my machine and tell that man he was destroying a whole lot of plant food and humus, that he should have plowed under every pound of these vines and thus enriched his land. But I did not get out and deliver the message. I have received some pretty hard knocks by trying to advise people and I am a little shy as to doing it now. So it goes in every farming section of the whole country. Yes, Dr. Woods, "We learn slowly in this world."

* * *

Have you ever eaten a tangalor? No? Well, then, you have missed something worth while. It is a fruit having the appearance of an orange. It is a chance seedling found in Dade County, Florida. It is supposed to be a cross between an orange and a grape fruit and is a most delicious fruit. People like it better than they do the best oranges. I was out to the experimental fruit farm of Dr. E. B. Teller the other day and ate some of this fruit direct from the tree. There are but a few of the trees now in fruiting and the fruit is seldom found in the Northern market, but if you have the chance to buy some of this fruit, do so. Dr. Teller is located down in the red clay soil section and has established the fact that all this red clay land needs in the way of a fertilizer is a crop of cow peas turned under each season. Dr. Teller is doing a grand good work for the fruit growers of the state. It is a labor of love with him and he is getting a great deal of pleasure out of the work.

* * *

W. W. McCloud, Ind., wants to know if he would be justified in planting a ten-acre apple orchard of early Summer varieties, the fruit to be sold in Indianapolis and nearby towns. Mr. McCloud should know conditions there better than I do. I think he would be able to dispose of the product of a ten-acre orchard of Duchess, Yellow Transparent and Henry Clay apples, but if the markets there are glutted with early apples, as are most markets, he will find it hard to get good prices for his fruit. I would plant largely of Henry Clay. It is the earliest good apple and it is an apple of superior worth and a good looker. The tree is hardy and an abundant bearer. If he can get this apple into the Indianapolis market he can command a big price for his fruit, for it will be on the market before the Duchess and Yellow Transparent appear. I am often at a loss to understand why this most profitable of all early apples, and the earliest of all, is not more generally planted. I think in most sections a small orchard of this variety would be a very profitable investment.

* * *

Was out to the farm of a potato grower the other day, and on that day he was receiving \$2.40 per hamper for his new potatoes—a hamper holding

three pecks. Pretty good price, is it not? Yet this grower has his trouble and his years of failures, as do all growers, whether in Florida or elsewhere.

* * *

I was very much interested in reading your recommendations of Virginia for farming and fruit growing as I have been thinking for some time of purchasing land down there with the idea of raising poultry and fruit. Will you please give me some advice on this subject?

Is Virginia suited to poultry raising considering soils, climate, and markets? What part of the state is best for such a combination? Why is land so cheap down there? And is any other of the southeastern states more favorable for poultry and fruit?

There seem to be very few poultry raisers in that part of the country, but whether it is due to the country or just to the fact that it hasn't happened yet, I cannot find out.

I should also like to ask you what kind of a spraying outfit you would recommend for back lot poultry and fruit raisers. Of course it must be a hand power machine, but should I get a direct acting type or a compressed air machine with a tank, and in the latter case would a galvanized tank do or would you get a brass one? I want to use it also for whitewashing poultry houses.

Chas. C. Cobb, Jr.

Yes poultry raising is a very profitable industry in Virginia. The soil is all

right in all parts of the state. The climate is favorable and the poultry and egg producer there has good local markets, and is near the best markets in America. The Piedmont and Valley of Virginia, better known as the Shenandoah Valley, are very favorable sections for this industry. I think I would rather favor either of these locations to one in the Tidewater portion of the state where the Summers are much warmer. However, the business can be made very profitable in the Tidewater section. Of course the Tidewater section is out of it as a fruit section. It is on the elevated lands and mountain sides that the profitable apple orchards are found. Here the bloom is not injured by frost as it would be in the low-lying Tidewater section. Virginia is more favorable as a fruit and poultry state than any of the far Southern States. Tennessee, North Carolina, Northeast Georgia and South Carolina also have some wonderful fruit sections. My correspondent is mistaken in his belief that poultry is not produced in large numbers in Virginia. Why is land so cheap in Virginia? Good, improved farms may be cheap, but they

are not low in price down there. It is true that excellent fruit land may be obtained for what is a cheap price in comparison with the prices governing Illinois land. This is because immigration seems to travel on east and west lines. Then, too, the war of 1861-65 left the people of Virginia very poor. This is the chief reason why lands can still be bought there at prices most attractive.

There are many makers of spray outfits, such as my correspondent says he will want. The ten-gallon two-wheel hand outfit is a most practical one. Do not get a barrel outfit unless you arrange to have it hauled by a horse. With the ten-gallon tank size, such as I refer to, you can do excellent work. It is a one-man outfit. Do not get a compressed air machine. I have never seen one which was satisfactory.

* * *

A few days ago I went out to see the picking in a 600-acre tomato field. It was an interesting sight. There were about 200 negroes at work. The fruit is picked green and ripens while on the way to the market.

Are You Getting 24 EGGS Per Month Per Hen?

If not this Spring, why not?
It isn't impossible, especially from now on, if you have hens which are from an average strain of layers and you feed them a feed that is rich in protein and carbohydrates—the egg-making food elements.

Here is a feeding plan we know from long experience will surprise you at the increased egg yield it will produce. Go to your dealer and get a sack of **Schumacher Scratch Grains**. Feed in the morning, five or six quarts to each 100 hens, scattered in litter that is a foot deep. At noon give them 3 or 4 quarts of sprouted oats (dry) and keep Schumacher Mash Feed in the hopper all the time. At night give them 10 or 12 quarts of Schumacher Scratch Grains. Don't let them go to roost hungry. See that they have plenty of clean, fresh water at all times. Keep this up regularly for 30 days, giving attention to housing, range, etc., and you will soon be getting two eggs where there was only one before.

SCHUMACHER Scratch Grains

is not just a mixture of grains, but a mixture of grains and "brains". It is a scientific combination of selected cereals which our feed experts have found by analysis and long experience, form the most perfect combination for egg production.

These men are constantly testing and working to produce for us (the largest manufacturers of feeds in the world) the most efficient feeds money can buy.

Our reputation is a guarantee of highest quality. We never "guess" at quality. We know before our feeds go to the buyer the exact food analysis, and further, the exact food efficiency. Our feeds and our reputation are one—the best in the world. You will find Schumacher Scratch Grains more than satisfactory.

Nearly all dealers sell our feeds. Don't accept a substitute. Test them and you will find they are the feeds to feed. If your dealer can't supply you, write to us.

H. F. RIKHOFF, 527 Occidental Building, INDIANAPOLIS, IND.

find the Rhode Island Red or the White Wyandotte far better suited to his purpose than the Houdan. The Houdan, despite the claims of some who are breeding them, are not a general purpose fowl for the farmer in cold Wisconsin. They are not, as a rule, heavy Winter layers. I think my Wisconsin friend will make a mistake if he attempts to build up a flock of Utility Houdans in Wisconsin.

* * *

When these notes are being read by members of the A. P. J. family I will be busy out in the garden and orchard at home. It is all very nice down here in Florida, but I am getting anxious to be back home with all the things I love so well.

* * *

I always read with interest your items on Horticulture in A. P. J. and often wonder in reading your advice if anyone has ever called your attention to this part of the country in regard to fruit production. Henderson County, Kentucky, has proven in the last few years that no better apples are produced anywhere than here. Stayman's Winesap, Arkansas Beauty, Rome Beauty, Delicious and other good varieties are produced in this county with flavor not found elsewhere, and within the last few years wherever shown have always taken first premiums—Kentucky State Fair, Ohio State Fair, Missouri State

Fair, Pan-American Exposition and many others. They have always been in the money. This county has hundreds of acres of the finest fruit lands on earth. Deep, rich, red clay subsoil that certainly puts the right flavor under the skin.

Now we do not claim to produce a perfect outer color as is found on the apples grown in some of the far western states, but in flavor and quality we do produce a superior apple. Good fruit lands here can be bought for \$60 an acre, with coal and mineral rights worth \$20 per acre. W. J. La Rue.

Mr. La Rue is one of Kentucky's most prominent poultrymen and is deeply interested in fruit production also. I am glad to get his letter. I like to have a man proclaim the merits of his own section and hope to receive reports of this character from A. P. J. readers in all the really good fruit sections of the country. There are many thousands of men in the towns and cities who are anxious to get hold of lands at fair prices in sections which have been proved fruit sections. It is a pity that so many fraudulent companies are allowed to operate as they do, selling lands as fruit lands which are wholly unfit for fruit production. Such lands are being offered in nearly every state in the union. I can endorse what Mr. La Rue says of Henderson County, Kentucky.

* * *

The damage by frost in Florida during the month of February extended to a point not far north of Miami. Yet there are several companies taking pages of advertising space in the farm and fruit journals, telling people that the section around Jacksonville and to the south is one in which the vegetable and fruit grower can become rich. And Northern people are buying these lands without first investigating and are pouring down by the hundreds to make homes on these lands. Failure and disappointment for all, and ruin for most of them is to be the result. Again let me say to A. P. J. readers, do not buy an acre of ground in Florida (or anywhere else) before making a personal inspection of the land.

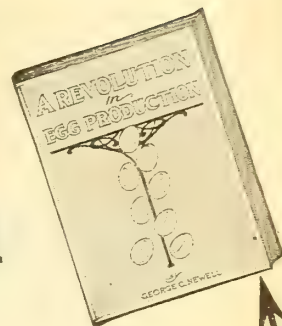

* * *

In answer to P. C. Tower, Wisconsin: Yes, I am confident you can make money producing currants and gooseberries. But why do you figure on shipping these fruits to St. Paul and Minneapolis when you have a town of 12,000 people at your very door? It will require the product of several acres to supply the local demand for your small fruits. This will be a profitable market. Get busy and cultivate this home market. Downing gooseberry will be all right for you to plant. Make your currant planting largely Diploma and Red Cross, with a few Wilder for the late season's trade. The fruit will hang on the Wilder in good condition until very late in the season when all other currants are gone.

* * *

When you receive the fruit trees which you will plant this month, place their roots in a mud hole for ten to twelve hours. Dig a ditch, put in the trees, and throw in dirt and water. This treatment is a good one, for it softens the roots, and refreshes the whole tree, in consequence of which the tree will make a far better growth than if planted at once or if the treatment is not given the tree. By this treatment the roots start to grow before he leaves are brought out by the warmth of the air. Any tree which starts foliage growth

A Revolution in Egg Production

is the title of a new book by George G. Newell, just from the press, and its name states exactly what it is: A Revolution in the Methods of Securing a Large Egg Production, and

IT WORKS!

Mr. Newell leaves nothing to theory or imagination—he gives all the “whys” and “wherefores”—the cold figures and plain facts—he is a hard-headed business man himself—of just what this system will do and why it does it. He not only supplies detailed knowledge of how to care for poultry, but also gives the reader something in the way of a post-graduate course, and, besides all this, he brings forward subjects which, to our knowledge,

Have Never Been Taken into Consideration Before

This is not a book for beginners. This is not a book for past-masters. It is a book for every man, woman or child who keeps poultry for pleasure or profit, because it not only carefully analyzes the already well-known factors of heredity and environment, but takes up the heretofore un-

explored subject of lengthening the hen's working day in the Winter, when the egg yield is lowest, and shows that by application of the **new principles** laid down in this book you can secure a much larger egg yield.

The first 12 days after trying his new system

Mr. Newell Increased His Egg Yield Over 100 per cent

and he keeps it up. He received an actual percentage of 43.52 of an egg per hen per day during a very cold February. Other poultrymen are using this system with success—friends to whom Mr. Newell has explained it verbally, and it is now offered to you in a **handsome, illustrated cloth bound book of 112 pages,**

for \$1.00

AMONG THE SUBJECTS COVERED IN THIS BOOK ARE

Chapter I—Feeding and Care—Care and Feed in General; Balancing the Ration; Conditions Should be Watched and Noted; What to Feed; Under Feeding; Over Feeding.

Chapter II—Housing and Appliances—Automatic Feeders; Fussing vs. Economy of Time; Water Problems; Housing, Ventilation and Light; Trap Nesting; Incubators or Hens for Hatching.

Chapter III—Brooding, Breeding and Yarding—Brooding Problems; What Breed? Meat Production

a By-Product; Yards and Exercise.

Chapter IV—Production and Care of Eggs—Spring and Summer Eggs; Fall and Winter Eggs; Care of Eggs; “Ask the Birds, Their Judgment is Good”; Production Under Present Methods; Production Records for 1913.

Chapter V—Basic Theories—“Whys” and “Wherefores”; Limited Fuel Boxes; Value of Light; A Hen's Business Day.

Chapter VI—Remarkable Results—The Problem

Solved; Production Records for 1914-1915; Longer Days Effects on Health and Vigor.

Chapter VII—Practical Application of Proven Theories—Production Possibilities; Averages and Percentages; Press Comments on the Experiment; Corroborations of Long Business Day Benefits.

Chapter VIII—Conclusions—Trying it on the Ducks; Heredity and Performance; Egg Production as a Business Proposition; Capital and Equipment for Large Flocks.

Carbo Units

are best for supporting chicken houses, garages, sheds or other buildings.

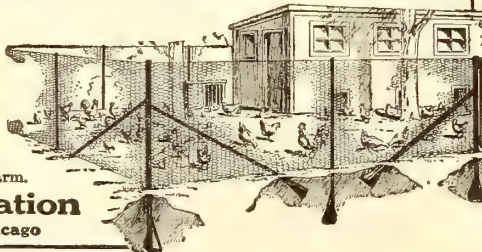

Just set in earth. Life ten times that of wood. For supporting fencing between terminals, use Carbo Spring Supports.

Write for Catalog 16, which tells about Carbo Units and their 101 uses about the farm.

The Carbo Corporation
401 Rand-McNally Bldg., Chicago

Carbo protects life and health

Use Carbo Units to support your poultry yard fence, and have a fence that is vermin, filth, dirt, moisture and disease proof. No wood to gather dampness and rot. Three Carbo Units make a fence corner that will outlast the fencing wire. One man can set this corner in a half-hour. Carbo sets in earth—no concrete used. Less expensive than wood, concrete or semi-steel posts.

Forest Hill Poultry Yards Quality White Plymouth Rocks

Eggs, Fertile Eggs. 100 Per Cent Fertility Guaranteed.

Pens 1 and 2, extra good exhibition birds; eggs, 50 cents each. Pens 3 and 4, good exhibition birds; eggs, \$5.00 for 15, \$8.00 for 30. Pens 5, 6, 7 and 8, exhibition birds; eggs, \$3.00 for 15, \$5.00 for 30. You cannot buy eggs from any better stock at the above prices anywhere. All unfertile eggs replaced free if they are returned express prepaid within 15 days from receipt of them. Our birds have been prize winners at the leading shows for ourselves and customers. I am interested in Florida and I am advised by my doctor to change climate. As I am a poultryman and a subscriber to A. P. J., I would be very grateful to you if you will bother to answer my numerous questions. I would like to know if Florida is a very healthy state for poultry raising. Also how are the markets, that of the price of eggs and poultry at different seasons? Which is preferred, the brown or white shelled eggs? What is there to the talk about the sand flea and does it bother old or young stock, at certain seasons or at all times? Also about the average price of grain at retail, oats, wheat, etc. Which is the best time to hatch chicks there for layers? Do they grow any apples at all in Florida? George Teague, Illinois.

In answer to Mr. Teague will say that when properly cared for poultry is as healthy here as in other sections of the country. No live stock can have the vitality and "the get up and get" here in this semi-tropical country possessed by stock in the Northern states. It is just so with the people who remain here year in and year out. While it does not get any warmer here than it does in the Northern states in Summer, it is the long and continuous pull on man and beast and fowl that takes the tuck out of them all. The markets in Florida, for eggs and poultry, are not such as to appeal to the man who desires to conduct a large commercial plant. There are no big cities in Florida and but few large towns. During the Winter months when hundreds of thousands of Northern people are here the hotels in the tourist towns take large quantities of eggs and poultry, but this is for three months' time only. Price of strictly fresh eggs today (February 26th) in Miami is 55 cents per dozen.

It is necessary to fight the sand flea and many other insects which annoy fowls, and especially chicks. But this can be successfully accomplished. It is only in the Summer season that the insects are bothersome. Prices of grain and other food stuffs vary here as elsewhere. Have watched this closely for six years and find that prices here are about one-third more than prevailing prices in Iowa and Illinois. Here the hatching season is from December 1st to February 1st.

* * *

In answer to Wm. Barnham, North Dakota: I am unable to suggest a place for your garden and lawn as I am not possessed of any facts as to the size, shape, slope or elevation of your land. I never see "plans for the home grounds" given in a magazine but that I realize there is a lot of very impractical matter dished up in these garden magazines. No two pieces of land in all the world can be planted on the same plan and the giving of a general plan with the idea that it will be of service to any one, is a waste of time, and may even do a great deal of injury to some impractical persons.

RICH GOLDEN YOLKS

depend on summer green food. Hens can get this necessary succulence better and cheaper than green food and will lay more eggs if you dissolve

All In Knowing How To Use It.

ALMOST every day for a number of years I have passed by the place where oil was first discovered by the Seneca Indians. Their method of producing was to throw a more or less clean blanket on the top of the water where a scum of oil had gathered, and wring the oil and water that soaked into the blanket out into tubs. After which they skimmed the oil from the top of the water, bottled it and sold it for medicine, and Seneca Oil became famous in some parts of the country as a sure cure for coughs, colds and sore throat. I can remember when right here in the oil country Seneca Oil could be bought at country stores at 25 cents a bottle. But as in many other things, the Pale Face upset the Indian's industry, wells were drilled, and Seneca Oil produced in such vast quantities that it dropped in price from 25 cents per bottle to 50 cents per barrel, making it altogether too cheap and common to use for medicine. The Pale Face then began distilling the Seneca Oil, some-

thing after the manner of distilling whisky, thus making a clear water-white oil instead of the green, dirty looking oil, and selling it for illuminating purposes instead of medicine. From this distilled oil our kerosene comes, and this kerosene when it comes from the still is used as a medicine for colds, but not particularly pleasant to take.

A gentleman of my acquaintance once told me of having a cat that was so badly afflicted with mange that its whole body was a mass of sores. Its eyes were almost closed. It had been a great pet and he hated to kill it. A neighbor told him to get some oil right from the well and dip the cat in it. He started for the well with a pail, and on the way met an oil treater from one of the refineries, whose business it was to treat kerosene oil to make it fit for market. The treater told him not to use the crude but instead to take the distilled product before it was treated. He did, and in a few days his cat was clean of sores, and never thereafter showed any signs of mange. That was *kerosene distillate*. Now what is the difference between kerosene distillate and the kero-

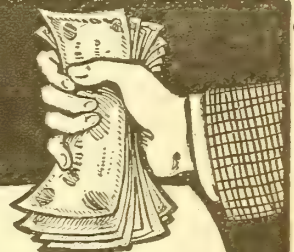

sene oil our friends buy to cure their poultry?

Kerosene distillate has a peculiar smoky odor and a yellowish color which is offensive to the fastidious buyer who demands something better. So the refiner must give him what he wants and charge him accordingly. A treater is thus employed to remove this unpleasant odor and also make the oil water-white in color. He runs the distillate into a lead lined tank and pumps into it pure sulphuric acid, then agitates the oil with compressed air until the acid and oil are mixed, which clears the oil and removes the odor. But the acid must be removed. To those who do not know the nature of sulphuric acid, I can best explain by telling them of the conditions of the treater's clothes, for be as careful as he may he will occasionally get a little spray of acid on his clothes, and wherever it touches it eats a hole thru. He is generally seen with clothes looking as tho a party of hunters had mistaken him for a rabbit and all peppered him with shot at once.

I remember one time when a man, who was a German, was unloading a car

Which Will You Have Lice or Profits

There are 30 different kinds of lice that infest Poultry and every one of the tribe helps to rob you of your Profits. When once they get a good foothold they make the poultry business look sick. If you want profits, you cannot tolerate lice and must get rid of them. A hint to the wise is sufficient—Get right after them—Use the remedy that has been for

30 YEARS THE UNIVERSAL FAVORITE

The Old Reliable Lambert's Death to Lice Powder

and your lice troubles will be no more. Its effect is immediate and it will not injure eggs, hens or chicks, nor soil the finest plumage. It is just the thing for sitters, to make them sit comfortably. It is also invaluable for destroying lice on Horses, Cattle, Sheep and Swine.

Baby Chicks?

Are you acquainted with The Lord Farms, or The Everlay Farm, which is one and the same thing? Sit right down now and write for our 104-page catalog, all about

S.C.W. Leghorns

Do you know that we are selling more chicks than any other breeder in this part of the country? The reason is, we hold our old trade and continually add on new. Our prosperity is a proof of the satisfaction our customers are getting, and show that we have good Leghorns and sell at popular prices.

Let Us Give You a "Successful Tip"

Everybody makes a rush for March and April chicks, which is the proper thing to do for the big breeds, but if you are after the biggest egg records possible from Leghorns, buy May hatched chicks. The biggest laying records on this breed are all practically made from May or later hatched Leghorns. It pays to be slow some times. For the past five years we have carefully looked up the records our customers have made in quantity of egg production, from birds hatched from February to August, and nine times out of ten the later hatched chicks have averaged the most eggs during their pullet year. We have sold chicks as late as July 8th that laid 252 eggs. The pullets that have been laying 50% to 65% this winter were hatched after the 15th of May.

Book your order now for May hatched chicks

the best month in the whole year for Leghorns. We can take your order for either 25 or 10,000 chicks. Hatching eggs in any quantity, at half the price of chicks.

Cet our catalog now, and address either

JOHN SCHABELL, 3331 Cuyler Ave., Chicago, Ill.

of acid, having the top off the tank. It happened that his brother-in-law who had just arrived from Germany and was watching the operation, stuck his hand into the acid thru curiosity. The other German told him in an excited manner to wipe it off quickly and stick his hand into the water or it would burn his hand. The brother-in-law alarmed, stuck his hands between his legs and closed tightly upon it, pulled the hand out again and jumping from the tank, stuck it into a pail of water. The hand, fortunately, was saved, but inside of half an hour he decided that German made trousers did not stand Pennsylvania climate very well.

Of course this acid must be removed from the oil before it is marketable. The method of doing this is to dissolve caustic soda in water and add to the mixture and agitate the oil, acid and caustic soda, with water, after which the acid, soda and water are drawn off, leaving the oil in the tank. If the treater is careful in this wash, only a small percentage of acid or caustic soda remains in the oil; but if he is careless the oil is more liable to blister than that which is well washed out.

I can best tell what effect caustic soda has on flesh by telling an incident which I once saw in an oil refinery. I was in the office of the refinery and among other things I noticed a large pitcher and wash basin on a stand in one corner of the room. While I was there, one of the proprietors came in, and going back to the before mentioned stand, poured some water from the pitcher into the basin and proceeded to wash his hands. He just got nicely started when, to my surprise, he began to give us a fine imitation of a Turkey City Turkey Trot. (Just remove the receiver from your ear until I tell you of the original Turkey Trot.)

During the early oil excitement near the location of big wells, towns sprang into existence like mushrooms over night, as it were. In western Pennsylvania one of these small towns had loomed up too quickly for its busy business men to think of a name for it. But just as it got nicely started a couple of sharp looking individuals with an old fiddle and a lot of turkeys blew in, engaged quarters in a saloon and set up a cage in an empty room. After which they proceeded to advertise "dancing turkeys." They then opened up business by one sawing on the old fiddle such tunes as "Irish Washerwoman," "Sugar in the Gourd," "Arkansas Traveler," etc. When the fiddler would start up a tune his attendant would bring a turkey from the other room and toss it into the cage where it would immediately begin to lift one foot and then the other, then try to lift both feet at once and jump about in a most comical manner. Just as the tune ended the attendant grabbed up the turkey and took it out. When another tune started, another turkey was brought in. These gentlemen did some business—until some of the spectators discovered the bottom of the cage was iron and was kept hot from underneath. This discovery closed the exhibition suddenly and the present name of the city was suggested—Turkey City. (Now the receiver again, please.)

Yes, the old gentleman washing his hands, there in the office, danced around considerable, then we discovered the reason. The janitor had put a little caustic soda in the water to clean off some grease and the soda was painfully

eating its way into the proprietor's hands. The treater was sent for, and he produced some vinegar in which the old gentleman washed his hands, and the effect of the caustic soda was killed. Now you have the secret.

Before you treat your chickens with kerosene for lice put a barrel of water and a barrel of vinegar in your coop, and after you use kerosene watch them closely. If they go calmly about their affairs, eating or laying eggs, the kerosene was no doubt good. But if they begin to do the Turkey Trot, grab them

with all possible speed and douse them first into the barrel of water, which will kill the acid, then douse them into the barrel of vinegar, which will kill the caustic soda, and the lice being so much smaller than the chicken, the kerosene will kill them *first*. And you will have the satisfaction of knowing that you have accomplished your end.

Oil City, Pa. M. C. WILSON.

Criticism of Mammoth Hatcheries.

I have read considerable criticism of the mammoth hatcheries lately and I

am at a loss to understand just how any one man or association of men can prevent the big-day-old chick hatcheries from continuing in their chosen business. It looks to me like a pretty "tall order" to put good business concerns out of the running when we all know of business houses conducting what is termed "an all-around unreliable" business, and yet manage by hook or crook (mostly crook) to keep it up for some time.

The following is taken from a recent criticism of mammoth hatcheries and is

E. B. Thompson's Imperial "Ringlet" Barred Plymouth Rocks

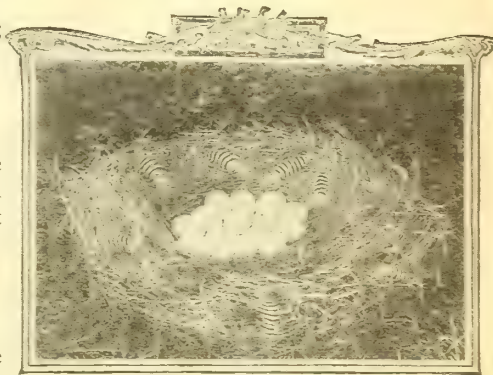

Are Recognized Thruout the World As
the Leaders of All the Barred Rocks

You Are Now Thinking About Eggs to Produce
the Silver Cup and Blue Ribbon Winners
for Next Season's Shows.

Think of the great satisfaction of winning prizes on birds you raise with your own hands, from the time the chick first sees daylight until the Blue Ribbon hangs on the coop in the Show Room. The delight of winning on a bird you owned all its lifetime cannot be described.

**My Imperial "Ringlets" Will Put You In a
Position to Win at Next Season's Shows.**

You may raise a single chick worth hundreds of dollars and capable of winning in the strongest competition—Hundreds of my customers have done this.

Imperial "Ringlet" Eggs in a perfect nest

My Matings Cannot be Equalled in Their High Quality and First Prize New York Blood Lines

They are the Finest in all America. In my Imperial "Ringlet" eggs you get the best First Prize Sweepstakes New York blood which you must have to win in the strongest competition. You will share with me and have an equal chance of producing the highest quality First Prize birds of the year. The Imperial "Ringlets" have a distinct type, color and barring—their color is one even blue shade and barring, is evenly spaced, narrow and straight across the feather to the skin—they stand out in pattern from all others.

My Eggs Are the Best that Money Can Buy—They Produce First Prize Birds

Mr. E. B. Thompson.

Wilcox, Pa., January 11th, 1916.

Dear Sir:—Just a few lines to let you know what the Imperial "Ringlets" have done for us in the show room this last fall and winter. The Mountain Poultry and Pet Stock Association, of Kane, Pennsylvania, held their show last week. We had 28 birds entered and they were admired by everyone as well as by the Judge; in prizes we took 1st, 2nd, 3rd, 4th and 5th Cockerel; 1st, 2nd, 3rd, 4th and 5th Pullet; 1st, 2nd and 3rd Pen; 1st and 5th Hen; 3rd Cock; Special for Best Pen in Show and Best Hen in Show, also a Special Silver Cup for Best Display in American Class. At McKean County Fair and Johnsonburg Show they won the Blues also. These birds are all from the stock we raised from the eggs we bought of you in the spring of 1914. We have some promising youngsters from the eggs we got of you last spring, too.

Yours respectfully, Nelson Bros.

Plainville, Ind., Jan. 3rd, 1916.

Mr. E. B. Thompson.

Deas Sir:—I will write and let you know that the Imperial "Ringlet" cockerel that I bought of you in December won First Prize at Plainville and Odon, Ind., and from the eggs I got of you last spring I raised seven pullets and seven cockerels; won 1st and 2nd Pullet; 1st Pen; 2nd and 3rd Cockerel. Kindly quote price on one setting of eggs from your best cockerel mating pen.

Yours truly, Fred Lawyer.

in line with most of this "investigation stuff."

"As time goes on these mammoth hatcheries no doubt will be brought into line. At present most of them appear to be commercial institutions. We believe we are right in saying that a large majority of them were started and are being conducted, not by fanciers, not by experienced breeders, who are advocates of real quality, but by commercial men, so to speak—by men who figure on doing things on a big scale and who are anxious to make large profits, season after season, without losing any time in getting started."

It is a puzzle to me to know what these mammoth hatcheries could be expected to be, if not commercial institutions. Certainly those who have invested heavily in both time and money in the day-old chick business could not have been believed to have done so for their health. The artificial discrimination of the writer of the above comes near being beyond the bounds of the dignity of intelligence.

So far as any dealings go with "fanciers" or "experienced breeders" of which I have any knowledge, I have been led to believe that such dealings were with "commercial men"—men who figure on doing things on a big scale and who are anxious to make large profits. At least there is every appearance of such having been the case.

By the same writer it is also claimed that many of the chicks sold from these hatcheries are "being produced from disqualified specimens." I am glad to number among my friends a great many fanciers and experienced breeders, and I feel confident in saying that most, if not all of them will freely admit that they frequently use disqualified specimens in their breeding pens, for many birds which would be disqualified in the show rooms might be invaluable as breeders. On the other hand, however, I do not believe these breeders would use diseased or deformed specimens in their breeding pens, which is altogether a different matter—and greatly to the credit of the fancier breeders, and is equally applicable to the mammoth hatcheries. The common run of people are not such a bad lot after all. E. H. JOHNS.
New York City.

A Source of White Diarrhoea Infection.

The hatching season is now here and soon will be heard the same old complaint of chicks dying with white diarrhoea, which leads me to tell of my observations on one phase of this knotty problem.

Most all facts were once theories and only grew to be facts by being proven; and two facts, now generally accepted, I believe, are that the white diarrhoea germs are present in the hen and each egg such hen lays is infected and consequently the chick at hatching time is infected and also that white diarrhoea is infectious.

Notwithstanding the advice from a supposedly learned writer in a daily newspaper that "white diarrhoea always proves fatal," some chicks positively do survive and grow to laying age and thus pass it on to the next generation of chicks. What a blessing it would be if it did always prove fatal. How quick it would die for the lack of perpetuance.

What I am about to say on this subject is a fact to me and I regret to say that I must call it theory because it has

not been proven to the general poultry public, but it has been proven to me by experiments extending over a considerable number of years in using hens, lamp and mammoth incubators for hatching, and using eggs from numerous flocks of my own, eggs I have purchased and eggs for custom hatching.

The greatest and first source of infection is caused by light. Understand, I said the *source* is caused by light.

I do not think it can be successfully disputed that white diarrhoea is far more prevalent among incubator hatched chicks than hen hatched chicks, yet many hen hatched chicks die from this same cause. Let me compare the two kinds.

There is no denying that a chick at hatching time has certain inherited instincts no matter what method of hatching is employed and the greatest and most noticeable of these instincts is to peck at, or eat. It is the same instinct that prompts a baby to try to put in its mouth everything from its fists and feet to "Papa's" gold watch. Anyone who has watched a hen at hatching time knows the peculiar notes she utters as she hears the "cheep-cheep" and how the little fellows when they need less heat and more air stick their heads out thru the fringe of feathers and quickly hide when she gives a warning signal, or how they scramble to the front when she calls them to eat something which is nearly always a piece of straw or egg shell far larger than they could possibly swallow; but they learn her calls and place dependence in them and if left to herself the hen on leaving the nest repeatedly calls them to eat so that the chicks depend on her and eat nothing unless she gives that peculiar call which I have never heard imitated, much less seen written. They follow the hen and get real food the first thing and learn to discriminate between that which should be eaten and that which should not.

But how does this compare with incubator hatched chicks and with these I will include hen hatched chicks taken from the nest as soon as dry if not before and placed in baskets or boxes near a stove?

I will describe an extreme case, but I wish it understood that the light may begin to play its part at any time that it gets to the chicks for any period of time.

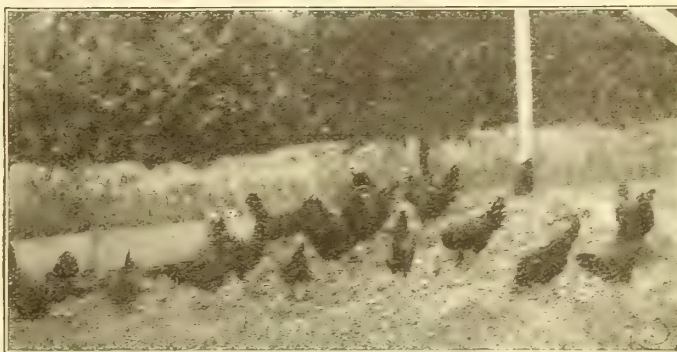

A chick infected at hatching time hatches in an incubator with glass doors in a light room and when strong enough works its way to the front and falls in the nursery, or if hen hatched it is put in a basket with light enough for it to see. Here it pecks other chicks in the eyes and on the toes, and in turn gets pecked. They all struggle to peck at any bright objects such as nail or tack heads or anything placed against the glass doors or thru a hole in a basket. Droppings from infected chicks are pecked at by other and healthy chicks, and thus a few infected chicks will infect a whole brood. Those infected at hatching time die first while those infected afterward linger along and die at various ages, or overcome it and live to maturity to pass it on to the next generation.

Thus it can be seen that chicks may become infected because of the presence of light which enables them to see and eat the droppings from infected chicks, and also the absence of the old hen's calls which teaches them the difference

ANOTHER GREAT RECORD

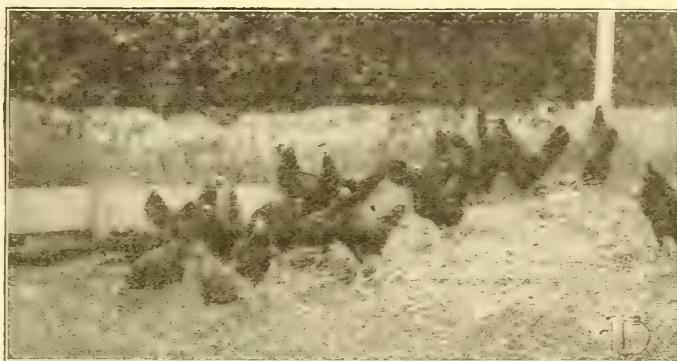

Three Generations of Sheppard's Famous Anconas

Looks Mighty Good, Doesn't It?

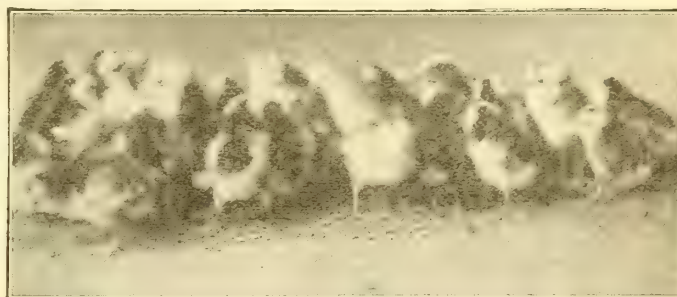

These are the birds that are world famed as winter layers. They have the wonderful record of 256 average for a flock. That is why my customers call them egg machines.

The pullets in the picture below were hatched from eggs laid by my birds in picture above, when parent birds were only four months, fifteen days old.

Here are the pullets that laid when four months, seven days old. Their eggs hatched these wonderful youngsters shown below, producing three generations in less than one year, making a record that stands alone.

Sheppard's Famous Anconas are bred to make good, both in the show room and as layers. They have made good for me. They will do the same for you. Stock, Eggs or Baby Chicks for sale. Send for our 86-page catalog which will be mailed upon request.

This Brooder Will Raise Your Chicks

Buy a **Newtown Giant Colony Brooder** and forget your brooding worries. There is no reason for risking the success of the entire season through experimenting with *untried* brooding devices. These may resemble the tried-and-true **Newtown** in appearance, but in efficiency the **Newtown** leads the field. *It is years ahead of all imitations.*

Sound business sense dictates the wisdom of using "the brooder that has made good" in all sections of the country and under all conditions. Thus late in the season you cannot afford to take any chances with your valuable broods of chicks. *You run no risk when you use the dependable Newtown—the first successful colony brooder of the coal-burning type.*

between food and that which should not be eaten.

Now the remedy for this particular cause is simple and costs nothing. Keep the incubator in a very dark room or keep the doors covered. When removing the chicks keep them as dark as you can and do not waste any time. I have found that fresh wheat bran in the moving boxes or baskets or shipping boxes is a very good thing, for what they eat of it, and they will peck, will do them good instead of harm. I am informed that in the great Petaluma district sand is used for this purpose and is also put on the nursery floors.

There is another form of diarrhoea often mistaken by many for white diarrhoea but which is caused by overheating and maybe by chilling and I may tell about this later.

Monticello, Ind.

FRED P. BIEDERWOLF.

Two Eggs a Day.

I have been a very interested reader of your Journal for some time and would like to tell my experience relative to hens laying two eggs a day. I have eleven S. C. Buff Orpington pullets that I have trap nested since the first of the year.

These pullets were hatched the 20th of March, 1915, and several began to lay October 10th. As I did not trap nest or keep any record of any kind I do not know how many eggs they laid up to January 1st. During January they laid 223 eggs.

One pullet laid seven eggs up to the 15th of the month, then laid from the 15th ever day during the rest of the month, and on the 27th and again on the 30th, laid two eggs, making nineteen eggs laid in seventeen days. On the first day of February she became broody.

Another of these pullets laid ten eggs during January, but she lays an egg that weighs three to three and one-quarter ounces each, none of which have double yolks, but are perfect in shape. Ducor, Cal.

H. E. HARROLD.

Origin and Characteristics of R. C. R. I. Whites.

This being a comparatively new breed but few people have seen them; and still fewer know what a really wonderful, all-around breed it is. When we consider its worthy ancestors it is not surprising that where it has been tried it is proving to be a most popular breed. It was originated in Rhode Island and was first offered to the public in 1903, and was obtained thus: A Partridge Cochin female was crossed with a White Wyandotte male. The pullets from this cross were mated with a Cochin male, producing an offspring one-fourth White Wyandotte and three-fourths Cochin. These pullets were mated to a Rose Comb White Leghorn male. Hence, the Rhode Island Whites are one-eighth White Wyandotte, three-eighths Partridge Cochin and one-half White Leghorn. From the Cochin it inherits size, beauty and plumpness, from the White Wyandotte, docility and their wonderful ability as Winter layers from both Cochin and Wyandotte. Combining these with the laying qualities of the Leghorn you have as nearly an all-the-year-around layer as it is possible to procure. Activity and alertness come from the Wyandotte and Leghorn. Quick maturity is also inherited from the Leghorn

while the Wyandotte has a good share also. Now, what is lacking? Here we have meat, eggs and beauty. A superabundance of each. What more could we ask for in one fowl?

I think I have given these birds a fair test, and they have excelled any others as an all-around fowl that I have ever tried. The eggs hatch well and hatch strong, hardy, active, liveable chicks. They manifest their activity very early in life. I have tried them in the same broods with the Reds, and while the latter was waiting for me to give them something more to eat the former would be digging away at the litter as tho their lives depended on scratching. Nor would I say one word against the Reds. They are fine birds which I admire very much, and birds which certainly deserve the popularity they possess. The R. I. Whites have all the good qualities of the Reds and possess them in a greater degree. In shape they resemble the Rose Comb Reds but are a trifle longer. They are snowy white with yellow legs and beak. Red eyes and bright red comb and ear lobes with neat head points. Head is of medium size, and beak of medium length, slightly curved. They stand erect, feet wide apart, with tail well spread and carried rather low. The breast is broad, deep and full; eyes large, oval, bright and prominent; back is broad and long. They are well feathered and their plumage fluffy, enabling them to withstand severe cold weather. The cocks weigh from seven to nine pounds, the hens from five to seven. Pullets begin laying at a very early age and are persistent layers thereafter; in fact, were best layers in the National

Egg Laying Contest except the S. C. White Leghorns from England in the year of 1915. A pen of April hatched pullets in my yard averaged 25 eggs each during the cold chilly month of December. In the production of eggs they excel all breeds I have ever tried. They do not go on a strike when the thermometer is hovering around zero, but fill the egg basket when the market is the highest. I have hens with egg records of 261 eggs per hen a year. Some of them are non-setters. Others are careful but not persistent setters and fine mothers. As a table fowl they are unexcelled. Their meat is fine, juicy and well flavored. They stand forcing well and under favorable conditions will make two pound broilers in eight weeks. They do well in confinement; but if given free range will hustle for their living and obtain it, if there is anything to be found. Hence, are suited to either the farmer or back yard poultry breeder. For the fancier I know no better bird. They are the attraction and sensation of the show room. In beauty they rival the White Wyandottes; but are a more business type. For a new breed they breed remarkably true to color; but like all other Rose Comb fowls, they throw some single combs. They are growing in popularity, and so far the breeders have not been able to supply the demand in either stock or eggs. I believe, for the beginner, a new breed is best, provided the new breed is worthy and has as many good features as the old. Thus he gets an even start with the breed and has a better chance to keep in the front ranks with it. C. A. FOSTER.

Chicago, Illinois

IF WE ARE DENIED THE SCORE CARD EXHIBITION.

By I. K. FELCH, Natick, Mass.

WHEN I was licensed as an A. P. A. judge, forty years ago, I was denied the privilege to score any bird in which I held any property right, for the purpose of selling it. In all that time I have never done so. But I have been employed to go to other breeders to mate and score their breeding pens that they might add to the merit of their stock.

I am no longer judging fowl in or out of poultry shows. But this course is open to any breeder to employ a first-class judge to do this work—but, my young reader, do not make the mistake of employing a judge of ill repute.

An honest, reliable judge will score your birds at your home as conscientiously as he would at a show. If you can show to the buying public that your breeding pen contains no females which score below 92 to 95 points and occasionally one to score 96½ points, your exhibit will prove as good as any show in the United States has ever made, and better than some comparison judged exhibitions have shown in merit. No one can cite six birds to score 97 in the last forty years.

During the forty years of my judging life I have sacrificed my right and desire to exhibit because there was a prejudice against such an act. Therefore you have seen that I have relied upon the help found in my advertisements in the best poultry papers. Cheap birds and cheap advertisements will never take you to the front ranks in the poultry world.

Commence by inserting such an advertisement as you can. Make it an all-the-year-around advertisement that the best papers shall continue to carry your name to the notice of the buyers.

Then get out a neat circular, stating the score merits of your fowls by a popular judge, and always send *good value* for every order you get and you will succeed. When poultry shows will give score card shows with judges of good repute, patronize them freely, for the score card value to your exhibit, which it will give you. You owe it to them for the occasion which such a show will give you, to make a record of merit for your stock.

In such a show it does not matter whether you win the blue or not. One-half a point or one point within the score of the blue will make a relative difference in price which will be small. It has happened when an exhibitor has won the collection prize of ten birds, to score more points than any other exhibitor when he failed to get any one of the three money prizes of the same show.

You and I would buy breeding stock from such a breeder and exhibitor in preference to any other. Especially if 93½ to 94½ points was the score of his ten specimens. People are beginning to look at the general average of merit of a flock from which they buy breeding and exhibition stock with which to stock the poultry plants that are springing up thruout the country.

Another word as to advertising and pricing of stock. There is not a breeder in the land that can receive less than \$1 for the advertisement in the sale of a single bird. What does that mean to you? Simply that you must have stock

Wendell's Incubators

Metal inside and out, heavy case well padded and double walls, automatic as near as can be constructed. A cracken good one.

We have specialized on brooders for the past 15 years.

We make all sizes, all metal, hot water heat, Warm Flannel to Lay on Chick's Back. The best on the market. We have not raised our prices this year.

Baby Chicks and Eggs for hatching.

STRAINS ESTABLISHED 1906

LAKEWOOD FARM

HOLLAND, MICH.

to sell that is better by a dollar than the average price or you will fall behind. You must ask a dollar on every bird sold to pay for this expense and have the bird worth it. As a rule, buyers fight shy of all breeders who advertise at a price people know they cannot afford. The cost of advertising is a legitimate expense as much as the corn you buy and feed the flock.

No sensible buyer will object to paying \$5 or more for first-class breeding females and from \$5 to \$15 for first-class males. But it is up to you to send good value for what your patron shall elect to pay.

It is easier to sell good stock at a fair price than to sell common stock for any price at all. I never had but one pen of birds returned to me in my life and that one, twenty-two days after the purchaser had received them—doing it, on my doing by him as I do to all, telling him to return at once if not satisfied. They came back with one bird in such condition that I burned her at once. I said to my helper: "Here is his reason for sending these birds back—the price I received was the smallest I ever sold eight birds for in my life." I sent the man his money back, but I am pointing out the situation to emphasize this: It is up to you to satisfy your patrons no matter who is to blame or who is the exactor of unreasonable demands.

I close as I commenced. Have your birds scored by a reliable judge. Make your advertisement as large as you can afford to run for the year thru, calling the reader's attention to your truthful circular which you will cheerfully send them. See to it that each customer gets good value for money received. Above all place your advertisement in a first-class poultry paper, for nothing cheap pays in poultry culture.

(Note—It would appear from this article that Veteran Fancier and Judge I. K. Felch still advocates private scoring of birds. If the scoring is honestly and fairly done as he urges, we can see no reasonable objection to it; and it certainly has much to recommend it from a selling point of view, because it gives to the buyer what to him is a tangible valuation on the quality of the specimen. No one will deny that from a commercial viewpoint "score-cards with the birds" is good business. But the American Poultry Association frowns upon "private scoring" and says in the Standard: "Private scoring of specimens is not advisable and members of this association are directed not to lend their support to the practice as a selling method." That is the American Poultry Association rule. Should it stand or should it be eliminated from the association rules? Unquestionably Felch believes in having the birds scored privately if you can't get it done in the poultry shows! Will the American Poultry Association reconsider the rule or will it excommunicate this veteran who is a pioneer fancier and one of the pillars of poultrydom?—Editor.)

MONEY IN THE BAG

F. S. CLAUSEN : OCONOMOWOC, WIS.

ROSE COMB BARRED ROCK STANDARD.

By S. B. WENGER, South English, Iowa.

IT IS only a matter of justice to the committee appointed to draft a standard for this new rock that the breeders give their views on the subject, as undoubtedly the committee desires to know the wishes of the majority of those concerned.

There is more importance in this matter than is generally supposed for upon the decision of this committee will hinge a deciding point, no doubt, of thousands of Barred Rock fanciers, present and future.

For my part I am perfectly willing that the committee use its own better judgment. I have a decided preference in the matter but whatever seems best to the committee and that they see fit to adopt I shall not raise a resenting voice. In this, like many other things, on which people differ in opinion the majority ought to rule. It is a fact, however, that many are not familiar with the points at issue, whether it

should be a single or a double mating standard.

We have amateur breeders and will have them as long as there is a poultry business, and there will be a poultry business as long as there are people upon the green earth. Every year there will be hundreds of new beginners in the pure bred poultry business. A large per cent of which do a short lived business because of disappointment and perplexing problems. For this reason especially I would favor making this new breed an easy task.

You ask the majority of Barred Rock fanciers, and in many cases people who have bred Barred Rocks for years, what is meant by double mating and they can scarcely give you an intelligent answer, much less would they be able to select a pen for special mating of the cockerel or pullet lines.

Most assuredly everyone can use his own choice in breeding regardless of the decision of the committee on standard, but the question is what is best for the advancement of the breed and what are the wishes of the majority of those concerned? These are no doubt questions in the minds of the committee.

Another side to this question of standard for the Rose Comb Barred Rocks, will the A. P. A. accept our application to admit our breed to the Standard of Perfection if it is adopted as a single mating standard?

In reality a breeding club ought to have the privilege of adopting what is considered the best interests of its own breed. This privilege ought to be allowed by the A. P. A. Why should it not? If a breeding club of sufficient strength of any variety of poultry sees fit to adopt certain methods pertaining to the best interests of its breed, why should it not be accorded that privilege? If we are allowed to breed Barred Rocks with Rose Combs, why have we not the same right to say whether our standard should be for single or double matings? It will not interfere with other breeds. Our club is at this time threshing over the same straw that the single comb breeders threshed out some years ago, and whether we get wheat or chaff or Barred Rock feathers remains to be seen. They are thru with it and it is now a matter purely our own.

The object at this time of drafting a standard for Rose Comb Barred Rocks

Hawkins' BARRED PLYM. ROCKS

The Recognized Champions of America.

Winners at the Greatest Shows.

Boston, New York, Chicago, World's Fair, San Francisco. The kind you will buy, when you want the best. By careful line breeding over a period of over 30 years, I have produced a strain of Barred Plymouth Rocks that has all the desirable qualities any fancier could wish for. My winnings at the greatest shows in America prove that they have the type and color that is correct. By careful selection this strain has developed utility features possessed by no other flock of Barred Rocks in America.

At Boston, 1915, in competition with the leading Eastern breeders in the best exhibit of Barred Rocks ever seen in Boston, they won 1st and 4th cocks, 1st and 2nd hens, 1st cockerel, 1st cockerel-bred hen and 1st pen, 1st and 3rd pullet-bred cocks, specials for best display, champion male, best colored male and female.

At the World's Fair, San Francisco, 1915, I entered a cock and hen and won 1st hen, 2nd cock, after shipping 3,500 miles.

At Chicago, I made a clean sweep two years in succession, competing with 654 birds, the "Aristocrats" of the West, including best display, champion male and female.

At New York, for 32 years they have won more prizes than any other strain. An entire flock of 21 pullets of this strain averaged 207 eggs in one year, again proving the superiority of my breeding method.

EGGS FOR HATCHING

Save the Babies

Reduce Your Loss of Chicks by Feeding Them With a

Simplex "Faultless" Baby Chick Feeder

The greatest contrivance yet invented to take the place of the Cluck in finding food for the little ones; and what's more, they don't have to wait until the hen is successful in finding something for them, neither must they wait for the man with the feed, get weak and lose vitality owing to proper food at the proper time.

The "Faultless" Baby Chick Feeder

is always on the job. It works like a charm, feeds the chicks nice, fresh, clean feed whenever they want it and just enough at a time with just enough exercise to keep them in good condition. Try one now and get more when your chicks start to hatch. Send for our complete catalog and find out about our profit-sharing plan.

For
Baby
Chicks

is to give the breeders a guide so that there will be more uniformity in our work and all work with the same object in view. Our aim should be real Barred Rocks with a low rose comb that will be better adapted to cold climates. There is another thing that should be taken into consideration; while we are making this comb improvement we should also shorten up the wattles which freeze as readily as a single comb. We claim this as a Winter breed and we should take into consideration Winter advantages.

Good Eggs.

DIRTY eggs are common at this season. The hens are in full lay. With much wet weather the soil of the runs is frequently muddy. Hens with dirty feet soil the eggs when they go to the nests.

Barred Rock cockerel, heading winning exhibition pen at Chicago Coliseum, 1915. Owned by Grant Sturman, Mt. Carmel, Ill.

You cannot make a really good egg out of a soiled one. Washed eggs are not wanted in the market, washing spoils their keeping qualities. Of course soiled eggs can be washed and used for hatching purposes, but we prefer to use clean, unwashed eggs only. We do not get a great many dirty eggs and we sell all such "dirties" to the egg collector.

To prevent dirty eggs: Be sure that nests are clean and nesting material frequently renewed; use a good, bright, clean, dry litter—not too deep—on the floor so that hens when scratching keep their feet fairly clean; renew litter frequently and do not permit it to get damp; when good litter is not available use sifted dry sand on floors; keep things clean under the roosts and use dry sand here freely; on sloppy, muddy days keep the hens shut indoors until afternoon and collect the morning's eggs when you let the fowls into the runs.

Collect eggs regularly, generally twice a day; more often if you use trap nests. Keep eggs in clean containers in a clean, well-aired cool room; a milk room or cold closet, where temperature does not fall below 40 or go above 60 degrees F. Sell, or otherwise dispose of all eggs twice a week. Use only well-shaped, firm-shelled eggs for hatching purposes.

BABY CHICKS

MONTHLY PRIZE CONTEST DEPARTMENT

The American Poultry Journal offers the following prizes monthly for the two best articles received on or before the fifteenth day of each month: For the best article, a prize of Three (\$3.00) Dollars will be awarded; for the second best article, a prize of Two (\$2.00) Dollars will be given. Articles intended for the Contest must be written on one side of the paper only and should not contain less than 1,000 nor more than 2,000 words. The articles may be written on any subject pertaining to poultry culture. We reserve the right to retain all articles submitted and to publish such as we deem worthy of space. Send all articles plainly marked to Contest Editor, American Poultry Journal, Lock Box 4, Silver Lake, Mass.

STORY OF A BEGINNER'S SUCCESS.

We Started Late in Life but We Have Kept At It and Have Succeeded and Achieved in Ten Years What Hundreds of Farmers All Around Us Have Failed To Do in a Lifetime on the Farm.—First Prize Article American Poultry Journal Contest.

By MRS. CHAS. CROSS, Sextonville, Wis.

TEN YEARS AGO on account of my husband's health, we moved from the city to a farm, and, as hundreds of others who have done likewise, we were ignorant of the first thing pertaining to farming.

I had heard and read much about the profit to be made with poultry and had determined to take a hand at raising poultry and see if I could not get my share of the "billion dollar industry."

As it was the spring of the year, we had quite a time persuading people to part with their poultry, but by persevering we finally succeeded in collecting a beautiful assortment in size and color—tho their laying propensities were not just what we expected of them.

Grains were high and money scarce and it did not take us long to see that as matters were going, there was no possible show of becoming rich from the proceeds of our poultry, as the few

eggs we were able to sell did not begin to pay for the food they consumed.

One day a neighbor gave me an AMERICAN POULTRY JOURNAL and explained to me somewhat about the different breeds of poultry, saying that she had a growing desire to own a good flock of pure bred poultry, but that her husband would not hear to her having them, in fact made a great deal of sport of all kinds of pure bred stock.

I took the AMERICAN POULTRY JOURNAL home; read, and subscribed for it and very soon learned that tho there were a great many varieties of poultry, it was not necessary to have them all in one flock, as we and a great many others seemed to have. I think it no exaggeration to state that our poultry yard at that time held representatives containing the blood of every known and many unknown breeds of poultry.

Not long after, I said to my husband as we were viewing our conglomerate flock, "Those are not hens!"

"Well, what would you call them then?"

"Scrubs, mongrels, monstrosities. But they are not to blame," I went on. "It is the ignorance of their owners who go on year after year perpetuating and despoiling the landscape with their kind."

I showed him some pictures of well bred birds, calling especial attention to a pen of White Leghorns. So it came to pass that the next spring found us with six White Leghorn hens and a cockerel

which we bought of a well known breeder—and not a scrub left on the place. Tho the seven white beauties cost us nearly as much as we got for all our scrubs, we were well satisfied with the purchase, for we had something that we could take pride in and enjoy looking at.

We bought a small incubator and started hatching all eggs from the pen of birds, but our hens seemed to be working overtime and we had to get a neighbor to hatch some of the eggs under her hens, and in addition we sold three sittings.

The following spring found us with 150 selected pullets and then we began to realize that there was a chance to make poultry pay. The next year we carried over 300 layers and used two large incubators and the small one, and the year following that, we added to our poultry pure bred White Holland turkeys, White Runner ducks and White African guineas. Today our poultry is running a close second in profits with a herd of heavy producing Holstein cows that my husband takes as much pride in as I do in my poultry.

We have had ten years of hard work on the farm and many times we could hardly see our way clear to purchase the next head of pure bred stock that we knew we must have to make the best success. But we have kept at it and have succeeded and achieved in ten years what hundreds of farmers all around us have failed to do in a lifetime on the farm. It seems to me that a great many have failed because they have no confidence in themselves or their ventures, and they are unwilling to be convinced that pure bred stock is more profitable than non-uniform scrubs. I want to add that my husband was past fifty years and myself forty when we began to farm.

Save Your Chicks From Lice

One of the greatest drawbacks to chick life and chick growth is lice. Once these pests get a firm hold, chick losses are sure to follow. Make your war on poultry lice before you set the eggs—sprinkle the nest thoroughly with Dr. Hess Instant Louse Killer; this will free the mother hen from parasites and tend to keep her quiet and contented.

Dr. Hess Instant Louse Killer

Sprinkle your poultry with it occasionally, also the roosts; put it in the dust bath and the hens will do the rest. Also kills lice on horses and cattle, sheep ticks, certain bugs on cucumber, squash and melon vines, slugs on rose bushes, etc. Put up in sifting-top cans. Your dealer will refund your money if it doesn't do what is claimed.

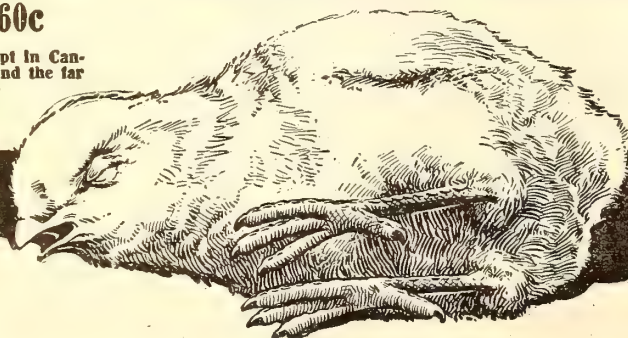

If not at your dealer's, write

BEST RESULTS WITH THE SITTING HEN.

Once During Each Twenty-four Hours the Broody Hen Should be Given an Opportunity to Eat, Drink, Dust, Exercise, Relieve and Rest Herself From the Strain of Long Sitting.—Second Prize Article American Poultry Journal Monthly Contest.

By OTTO E. HACKMAN, Fort Wayne, Ind.

THE NATURAL method of incubation still seems to be the only method of hatching chicks on many poultry farms today. On large poultry plants, as well as on city lots, the hen is depended upon to get out the season's crop of chicks. Those poultry keepers who have given time and thought to the subject of natural incubation, as a usual thing are rewarded with satisfactory results, while others seemingly are never able to do well in handling a broody hen.

Really, a great deal depends upon the individual who sets the hen, and more upon the way the hen is set than many care to believe. That there is a right and a wrong way to set a hen is not often taken into consideration by unthinking poultry keepers. Any "old way", or place, regardless of the hen's comfort or convenience is not conducive to good results in hatching.

For best results the sitting hen should be removed from the distraction and activity of the laying and breeding pens and all other conditions should be made as favorable for her period of quiet as possible. Have the nests for hatching in a quiet secluded place with a suitable yard for exercise attached. The nest boxes should be of medium size, American varieties requiring a nest about fifteen inches square and the same number of inches high. The front of the nest, however, should not be of the same height as the sides and the back. The front should be open, excepting a space five inches high at the bottom of the nest, where a board of that height is nailed across the front for the purpose of keeping the nest and its contents intact. The top of the nest should be covered, tho it is not advisable to have it nailed down. A great many times it will be found convenient to lift the hen from the nest thru the top of the nest, for sometimes in removing her from the front opening eggs are pulled out with her and broken. The top may be hinged, hooked down, or weighted to hold it in place.

If the broody is trustworthy the front may remain open for the hen to leave and enter at will, but in case she is not to be trusted, this same method may be employed at certain intervals during the day, taking care not to leave the front open for any great length of time. The hen should never be allowed to leave the nest or enter it by means of the top opening, except when removed by the poultryman, because of her liability to break the eggs by jumping down upon them.

After selecting the location and the nest for the broody, cover the bottom of the nest with several thicknesses of paper to prevent drafts from entering thru cracks in bottom of nest. Then cut a piece of sod just a little larger than the inside dimensions of the nest box, and place in the bottom of the nest with the grass side down. The corners and outer edges of the sod should be filled

DANGEROUS COMPANIONS FOR HEALTHY CHICKS

When White Diarrhea attacks one of your little chicks, watch out for trouble, because white diarrhea is contagious, spreads rapidly and often carries off the whole hatch. At the first sign of it, disinfect the entire equipment, move the chicks to new ground, put

Conkey's WHITE DIARRHEA REMEDY

in the drinking water. Separate the sick chicks from the rest and treat them according to directions on the package.

Better still, put Conkey's White Diarrhea Remedy in the water before the disease appears, then you'll not worry later. Packages 25c and 50c.

CONKEY'S GAPE REMEDY effectively rids chicks of gape worms. Unless treated, the chicks will choke to death. Results guaranteed. 25c and 50c.

CONKEY'S ROUP REMEDY—Used and recommended by practical poultrymen. Always have it ready this uncertain weather. Put it in the drinking water. It prevents as well as conquers roup. 25c to \$1.00.

Ironclad Wins in the Two BIGGEST HATCHING Contests Ever Held

Why take chances with untried machines when for only \$10 we guarantee to deliver safely, all freight charges paid (East of Rockies), BOTH of these big prize winning machines fully equipped, set up ready for use?

Why not own an IRONCLAD—the incubator that has for two years in succession won the greatest hatching contest ever held? In the last contest conducted by Missouri Valley Farmer and Nebraska Farm Journal, 2,000 Machines were entered including practically every make, style and price. With 140-egg Ironclad—the same machine we offer with Brooder freight paid, for only \$10, Mrs. C. F. Merrick, Lockney, Texas, hatched 148 chicks from 148 eggs in the last contest.

140
EGG

Ironclads are not covered with cheap tin or other thin metal and painted like some do to cover up poor quality of material.

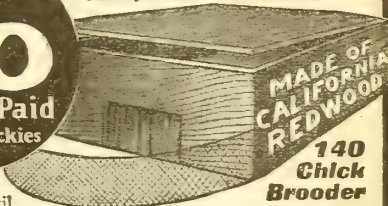

Ironclads are shipped in the Natural color—you can see exactly what you are getting. Don't class this big, all metal covered, dependable hatcher with cheaply constructed machines—and don't buy any incubator until you know what it is made of. Note these Ironclad specifications: Genuine California Redwood, triple walls, asbestos lining, galvanized iron covering, galvanized iron legs, large egg tray, extra deep chick nursery—hot water top heat, copper tanks and boiler, self regulator, Tyco's Thermometer, glass in door, set up complete ready for use and many other special advantages fully explained in Free Catalog. Write for it TODAY or order direct from this advertisement.

"Buckeye" The Standard

"The Best Incubator Made"

The System That

**HATCHES MORE CHICKS
AND
HATCHES BETTER CHICKS**

Than any other incubator regardless of size, price or method.

Recognized by the largest breeders and the largest poultry supply dealers as the safest and surest incubator ever built. Every machine a guaranteed success.

It's the Best Incubator Made

● Not the cheapest incubator but the best.

It's the incubator that is built UP to a standard and not DOWN to a price. That's why the "Buckeye" is sold by more reliable dealers than all the others combined—that's why so many of the large, successful breeders will use no other. The "Buckeye" is sold by more than two thousand of the largest poultry supply dealers and there are over 400,000 in successful operation! Let us send you a list of some of the big breeders who use the "Buckeye" and their reasons for using it. Let us send you the names of the largest dealers and their reasons for selling it. Let us tell you about the wonderful success of the "Buckeye" system and why so many have tried to imitate it. The "Buckeye" is made in seven sizes—60 eggs to 600 eggs.

600 Eggs	-	-	\$50.00
200 Eggs	-	-	17.50

The Standard Colony brooder is the most practical brooding device ever invented. It will do anything and everything that any other brooder will do and do it better. It is infinitely more satisfactory than brooders selling at twice the price. We are so positive that it can not fail that we will permit you to try one for thirty days and

Write Your Own Money-Back Guarantee

Sold and guaranteed by dealers everywhere at \$15.00. Insist on the "Standard" and beware of imitations. Write us for a "Standard" Catalog and we will tell you how to grow three chickens where one grew before.

under with fine straw or other nesting material, to give the nest a slightly concave shape. This slight hollow in the centre will have a tendency to keep the eggs together and prevent their rolling out and becoming chilled. The hollow should not be so deep, however, that the eggs will bunch up in the centre. Have it in such shape that the eggs will stay together nicely and at the same time may be shifted around easily. Fill in with some soft material that packs down well.

A good hatch often depends upon the number of eggs placed in the nest. Fifteen eggs are many times put under a hen, but I find that unless the hen is very large and the weather warm, that this is too many. If the hen cannot properly cover the eggs, those on the outer edge are constantly shifted about, all the eggs will be on the outer edge at some time during the hatch, and the entire hatch may be thus endangered. Some may think that because they have extra large hens, fifteen eggs will not be too many, but it is never advisable to use very large hens for sitting purposes, since they are almost invariably more or less awkward and clumsy on the nest. A medium sized hen, if in good flesh and of good disposition, always gives the best results in hatching and rearing chicks.

When the weather is cold, it is well to limit the number of eggs to eleven, but as the season advances and the weather becomes milder, the sitter may be given thirteen eggs with safety. During the hot summer months a hen may properly incubate fifteen eggs, for at that time there will be no need of keeping them covered closely. Should any eggs become broken during the hatch, be sure to wash those soiled with tepid water immediately.

Early in the season it is advisable to set the broodies inside a building. The floor should be of earth if possible and it is well to loosen up the earth a bit that the hens may be able to dust themselves when off duty. This aids greatly in keeping down lice, which in turn is quite essential in keeping broodies contented. Before being placed on the nest and at least once before the hatch comes off, the hen should be well dusted with a good louse powder.

Give the broodies good wholesome grains. Soft food is not advisable during the sitting period. Any good grain is relished, but whole corn is preferable, as it aids most in maintaining bodily heat. Green food should be supplied and fresh water should be before the sitting hen at all times. Once during each twenty-four hours the broody hen should be given an opportunity to eat, drink, dust, exercise, relieve and rest herself from the strain of sitting for three weeks, (and sometimes six or more weeks), in practically one position. Give the sitting hen a chance and she will show what she can do.

Recent Inventions for Poultrymen

By Lester L. Sargent, Patent Attorney, Washington, D.C.

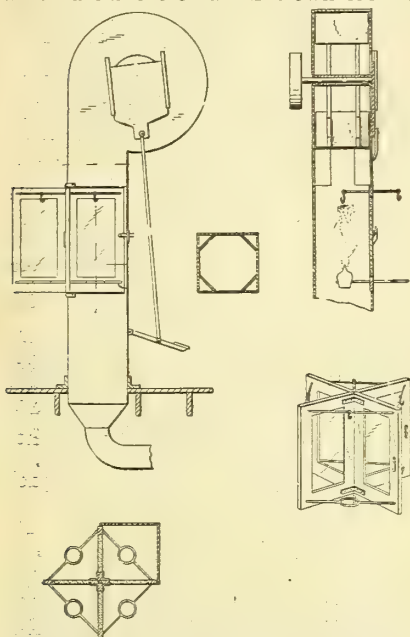

AN UNUSUAL poultry invention has recently been patented by William Short, of Denison, Iowa. It is a machine for defeathering chickens. The fowl—four of them—are hung between the leaves of a rotatable carrier device which is X-shaped in cross section. One-fourth of this rotatable carrier is positioned within a vertical air conduit thru which a current of air is blown from a

feathered the other fowls may be mounted in the carrier. The patent is 1,171,669.

A poultry trough or feeder that is inaccessible to rats or mice has been devised by Harry Slater, Indiana, Pa. It is cylindrical, with a curved door that can be slid over the open upper portion, when desired. The trough has partitions to separate the different kinds of feed. The patent is 1,172,913.

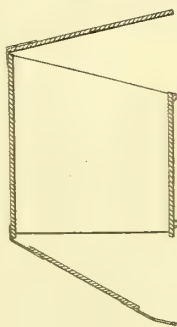

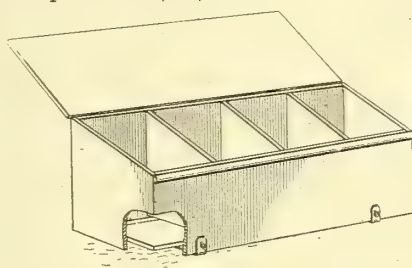

A nest with a cover that can be raised and a bottom that can be lowered has been patented by William A. Kuntz and Lambert M. Christopherson, Wolsey, S. D. This construction makes the nest easy to clean and provides a nest that may be closed at night to prevent setting hens from occupying the nest. The patent is No. 1,173,813.

Harve O. Sherrick, of Toledo, O., has invented a trap nest having a pivoted spring wire arranged to release the normally open door and allow it to close by gravity when the hen enters. The hen must be removed and the nest reset by hand. The patent is No. 1,172,638.

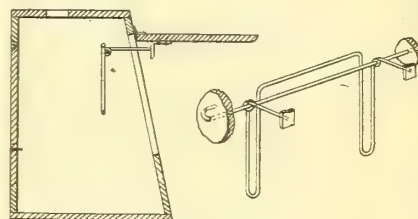

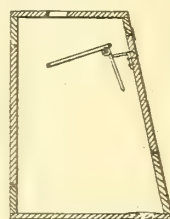

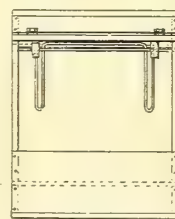

A machine for dressing chickens. Patented February 15, 1916, by W. Short, Denison, Iowa. No. 1,171,669.

rotary fan above. The conduit terminates at its lower end in the pipe thru which the feathers are blown by the air current from the fan. This is a much more satisfactory disposition of the feathers than to have them flying around the building. The device greatly expedites the dressing of fowls. The condition of the fowl can be observed thru the transparent panes in the wings of the rotatable carrier. No time is lost as while one of the fowls is being de-

Nest. Patented February 29, 1916, by W. A. Kuntz and L. M. Christopherson, Wolsey, S. D. No. 1,173,813.

Hen's nest. Patented February 22, 1916, by H. O. Sherrick, Toledo, O. No. 1,172,638.

Ponies Given Away

I AM the Pony King of America. I have given away 364 Ponies to Children. Now, I am going to give away **more Ponies**—some of the finest Shetland Ponies I could pick. I want every family that reads this paper to stand an equal chance. If you are a Boy or Girl, send in your name. If you are the Father or Mother of a Boy or Girl, send in your child's name. I will enter the name in my Big Free-for-all Pony Club, and send you a copy of my Pony picture and Story Book. Every child in the country should have one of these books.

Children—Write your name and address below, cut it out and mail it to me. You will surely get the Pony Book and maybe get a real Pony besides.

Parents—Don't miss this chance to get this to read it. Besides, your child may get one of the Ponies.

Hatch Chicks The Modern Way

Hatch 'em by electricity

This energizing force enables you to hatch chicks with but a fraction of the labor and risk involved in operating other machines.

The control of heat, moisture and ventilation is absolutely dependable. No guessing, no watching, no filling of lamps and trimming of wicks. The operation is perfect and insures a strong, vigorous chick from every hatchable egg.

Lo-Glo Electric Incubators

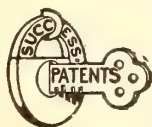

Make the hatching of chicks a real pleasure. These perfect machines are all metal, fire-proof, odorless, sweet and sanitary. Handsomely finished and may be operated in any room, store or office. Many users place them in the parlor or dining room. They're simple, practical and efficient. Sizes from 50 to 400 eggs.

Successful, no worry, hatching insured by doing it electrically. Fully explained in our booklet.

Lo-Glo Hovers successfully carry on the splendid development of chicks started in the right way by our incubators. Sizes 50 chicks and up. Write for free booklet.

Lo-Glo Electric Incubator Co., Inc.

Patent Your Ideas

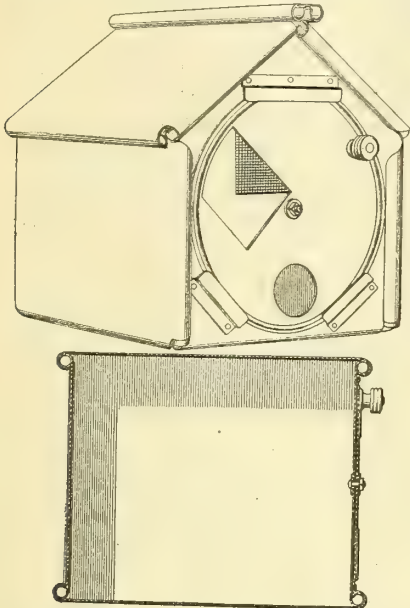

Inventions bring fortunes when protected by good patents. New ideas in great demand. I will get a valuable patent for you and help you make money from it. Ask about my free advice.

LESTER L. SARGENT
Cor. 9th and G Sts. Washington, D. C.

A hen's nest with an opening at the bottom of the upper nest portion designed to trap the eggs so that they will be out of reach of the hen as soon as laid has been devised by John J. Splitek, of Faith, S. D. The patent is No. 1,172,494.

A poultry coop that can be readily collapsed and which has an opening that releases the chicken while retaining the

Collapsible poultry coop. Patented February 29, 1916, by I. C. McDaniel, Kansas, O. No. 1,173,823.

hen in the coop is the invention of Ira C. McDaniel, of Kansas, O. The patent number is 1,173,823. The device involves no startling new features.

Brood Hens With Chicks.

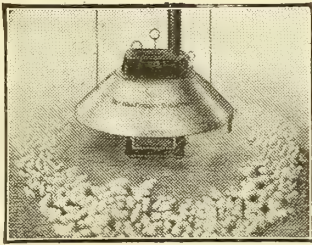

BROOD coops should be so made that the mother hen can be comfortably confined, while the chicks have a good sized run or abundant grass range. If necessary to allow the chicks only a small run, they should be removed to new ground frequently.

Give the mother hen her regular rations and water supply where she can get at them easily. Feed the chick food and other dainties for the youngsters just out of reach of the old hen. This will help to save expensive food and, if feeding boards or litter boxes are used, it will prevent chick foods being scattered around on the ground to waste and spoil. Feed liberally, but do not leave food around to sour and poison your chicks.

Provide shelter from sun and storms. Harden the chicks by giving them an opportunity to run to the weather, but be sure that they have shelter where they can get to it in a hurry.

Do not have brood coops too close together. Brood hens are liable to kill chicks not their own, if such stray within reach. Clean the coops and runs regularly and keep them clean.

The WORLD'S GREATEST BROODERS

Famous for High-Grade Construction and Efficiency

The Hill Colony Brooder - \$30.00
The Magic Brooder - 15.00

Both fitted with top and bottom draught regulation. These brooders are the great life savers of the Chick World. They are used on many of the State Agricultural Farms throughout this country. Our brooders will positively hold the fire; never leak gas; maintain an even temperature and require attention only twice a day. If you wish to succeed you must have brooders which will do the work. We will cheerfully refund the money after 30 days' trial if our brooders do not do all we claim. Write today for free booklet describing "The Turn-Point in a Poultryman's Career." You will find it intensely interesting. Agents

S. C. WHITE LEGHORNS FILL THE BILL.

A Large Per Cent of the Big Egg Farms Are Stocked With Leghorns. But No Matter What Object He Has in View, the Producer Must Ever Keep in Mind That a Steady Growth, From the Time the Chick is Hatched Until Matured, is Necessary for the Development of a Good Specimen.

By MRS. F. M. KELLEY, Mt. Carmel, Ill.

THE S. C. W. LEGHORN needs no introduction, for they have long been famous as prolific producers of large white shelled, uniform and fine flavored eggs, that always find a ready market at highest prices.

No doubt other breeds will make as

good layers as the S. C. W. Leghorn if they are bred to lay, but Leghorns have more than a half century start over the others.

Given proper housing and care they are the hardiest of fowls, thriving in any climate, a paying proposition to the back yard fancier, as well as the man with unlimited space. They are great foragers and will get most of their food if allowed to range, tho they stand confinement well, and we never have any trouble keeping them within a five-foot wire fence. We use open-front houses, covering opening with burlap in severe weather and never have frozen combs.

We can house and keep three Leghorns on same space and food, and get larger individual returns for each bird than two of the American or Asiatic varieties and that is quite an item in these days of high feed bills.

It requires less work to almost double

our profit than when raising the so-called general purpose fowl.

We have never had birds respond more quickly to kind and intelligent treatment; ours are the greatest of pets and seem to enjoy our being near them.

A large per cent of the Big Egg Farms of this country, England, Australia and New Zealand are stocked with S. C. W. Leghorns exclusively. Why? Because they fill the bill. No sentiment there, only a business proposition, and no man or corporation would keep a breed year after year, if he could get better results with some other. The birds are the machines that convert the raw product "food" into the finished product "eggs" and without an efficient, well balanced machine this cannot be accomplished at a profit.

Look up the egg contests and note which breed wins, not only in one year but three-year tests, thus demonstrating

**PREMIER
STRAIN**

BARRED PLYMOUTH ROCKS

bred and owned by O.B. ANDREWS CHATTANOOGA, TENN.

that the Leghorn has a longer sphere of usefulness than other breeds.

No wonder the demand for these thrifty little birds increases yearly. Thus there is always a ready sale for hatching eggs and well grown cockerels and a small advertisement in a good poultry magazine usually disposes of surplus stock. The beginner can enter the ranks from the first, and by giving his customers square treatment can build a foundation of future business. The Leghorns' eggs are strongly fertile and hatch strong, easily raised chicks if parent stock is of right kind. We use artificial hatching and brooding; the little fellows being so pert and saucy, quickly learn to take care of themselves. They have nice plump breasts and reach the broiler size more quickly than any other breed and are in demand also as squab broilers. Pullets reach maturity and the laying stage fully two months earlier than their heavier sisters. To get good chicks we must be sure of our breeding stock. Start with the best you can afford. Get your eggs or stock from a reliable breeder, then by selecting only your best for breeding purposes with an occasional purchase of new blood, steadily improve your flock. Remember, when buying stock, it's the breeding back of a bird that counts. It costs time, study and labor to produce choice birds. The man who has been trap-nesting for eggs, carefully mating and breeding each year only from his best, is entitled to better prices than another who is doing haphazard, hit or miss work.

Trap-nesting is a good way to improve your flock, either in fancy or egg production, for here we have positive proof of what each bird is worth, both as a layer and producer of show specimens. When we first began to breed S. C. W. Leghorns, we were told that the egg and show birds were two distinct types, tho we found some of our best layers among the ones conforming most closely to Standard requirements. We had been fortunate in our selection of a breeder. I think that in early years, some of the Leghorn breeders, anxious to perfect show specimens, neglected productiveness for shape, but I believe that day has passed, for our foremost fanciers of today are very particular in building up paying qualities with the fancy. To be successful in breeding, select your best laying females of Standard type. Cull closely, for it is far better to use two good birds than a dozen indifferent ones. Most beginners make the mistake of using all the flock, trusting to luck or chance to breed out defects later, but go slow. By breeding only your best at all times you will find a continuous improvement which would be an impossibility were the entire flock used. Select birds of good, vigorous constitution, hens preferred to pullets. Birds of long, rather deep bodies, with abundant room for digestive and productive organs, that eat heartily. The first out and last on roosts at night are usually heavy producers.

Never use a bird that has ever had any disease. Any bird once affected should be conspicuously marked so that it will never find its way into the breeding pen, for the foundation of a successful poultry plant is health and constitutional vigor. Remember the male is half the pen, and should be selected with greatest of care. We find it better to have a good bird, sound qualities in all sections, than one phenomenally good in one or two sections and poor in the rest. A good all around specimen insures a gen-

Reduced Prices May 1st

Beginning May 1st prices on all Pittsfield Day-old Chicks will be reduced each week, because of larger egg production and better hatches. Leghorns will be reduced ½ cent each; all others ¾ cent each. (Each week during balance of season.)

Read "A Revolution in Egg Production"—Ad on Page 655.

eral evenness of quality, much to be desired in a flock. We like to select as a male the son of a heavy layer. Well shaped, perfectly developed, bright of eye and alert of carriage,—a good description in a nutshell of what is essential in the male. Have him strong in sections in which the females are weakest.

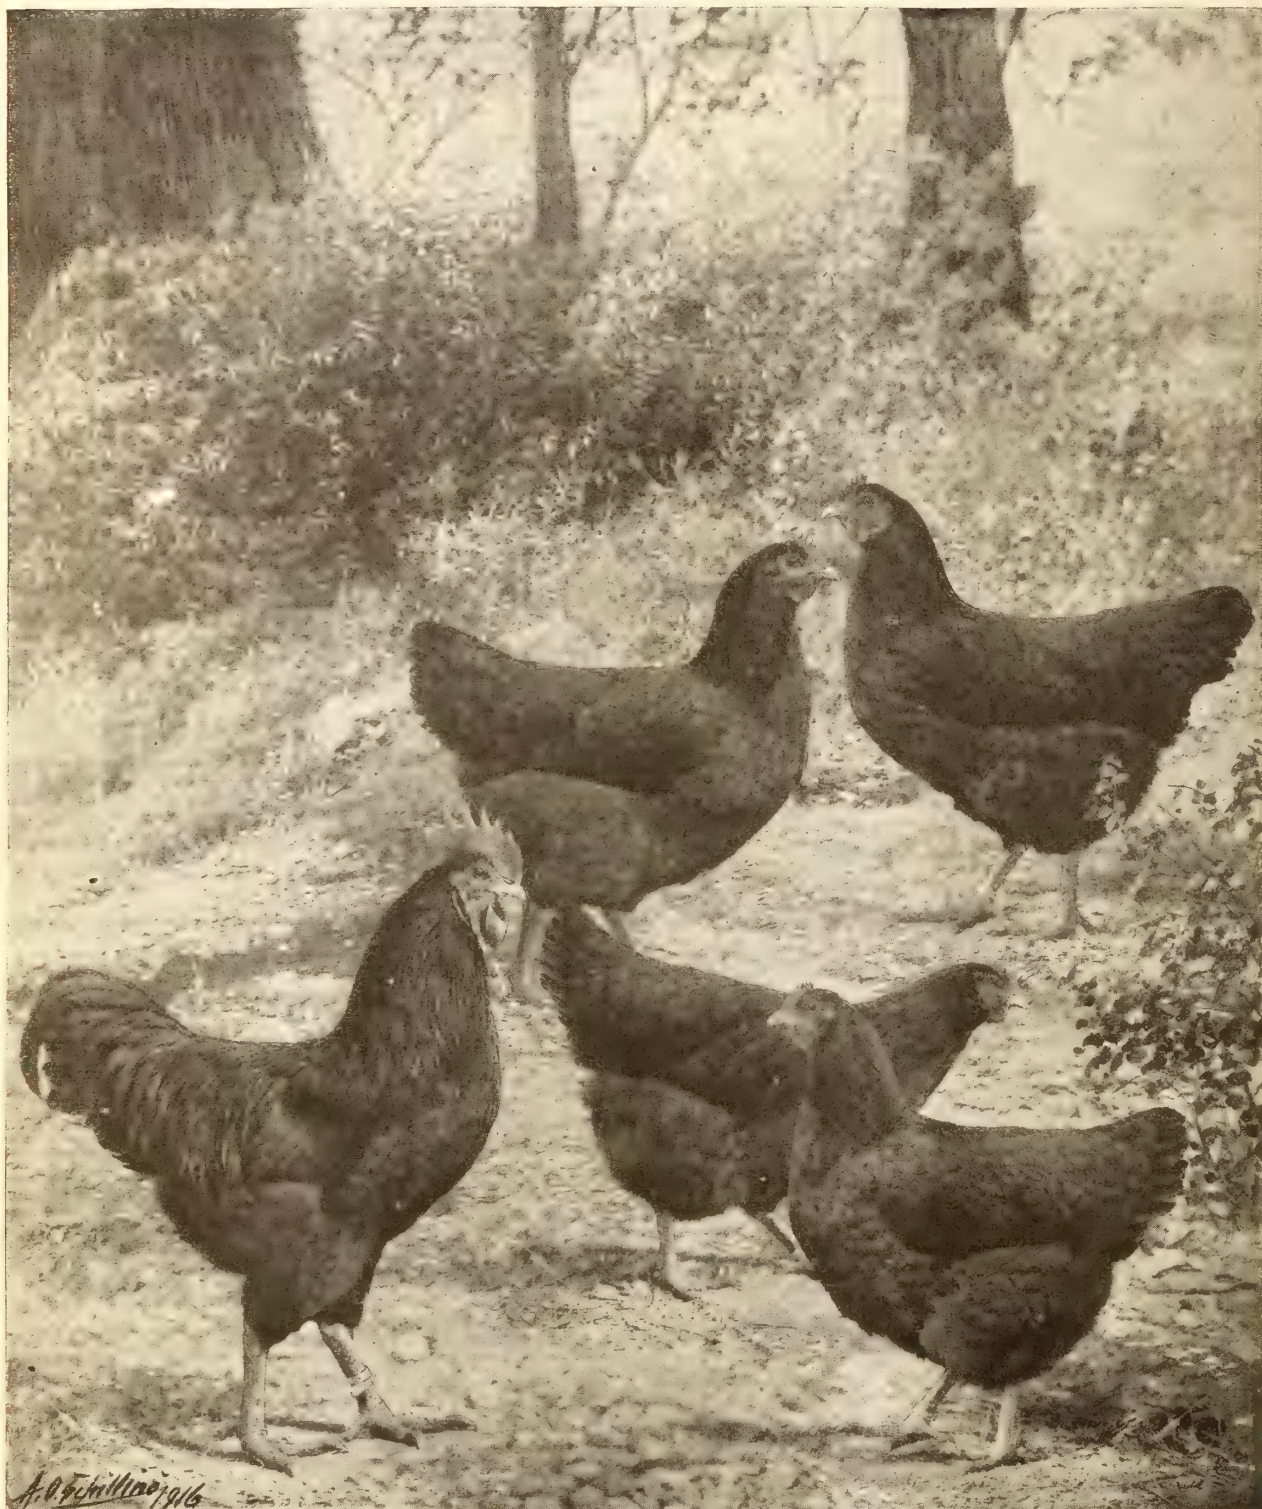

When attending the poultry shows note the large classes of S. C. W. Leghorns, usually the largest in the show room. This alone attests their popularity. Then turn the pages of this magazine and count the numbers of S. C. W.

Leghorn breeders. Doesn't that tell a tale?

After the chicks are hatched, a steady growth should be kept up. Any setback in the development of young chicks is sure to affect the perfection of the adult. Feed only wholesome grains and mashes and supply green food liberally thruout the days of the chick's development. It is true that adult fowls can manage to get along and lay a fair percentage of eggs with a very meagre supply of green stuffs, but I do not believe that a good

well developed pullet or cockerel has been produced without having green food in plenty during the growing period. See that fresh water is supplied the chicks at all times and if it is a possible thing, provide them with a good range.

In producing good specimens of any variety it is most essential that these things be taken into consideration, for no matter how fine the stock back of the chicks may be, if they are not given a chance to properly develop, their high bred ancestry will avail them naught.

Home and the Table

Good Things for Everybody

Helen F. Woods
Editor

The primal duty of Americans is never to forget that men are more than nations; that wisdom is more than glory, and virtue more than dominion of the sea. The greatness of a nation lies not in its bigness but in its justice, in the wisdom and virtue of its people, and in the prosperity of their individual affairs. The nation exists for its men, never the men for the nation.—David Starr Jordan.

* * *

THE following extract taken from the writings of Dr. Samuel Johnson, one of England's most distinguished writers of the eighteenth century is of particular interest to thinking people at the present time, and we take great pleasure in presenting it herewith for the benefit of our readers:

A BATTLE FIELD PICTURE.

As I was sitting within a hollow rock, watching my sheep that fed in the valley, I heard two vultures on the summit of a cliff, crying to each other. The voices of both were earnest and deliberate.

My curiosity got the better of me, and leaving my flock, I climbed slowly and silently from crag to crag, concealed among shrubs, till I found a cavity where I might sit and listen without giving disturbance.

I soon perceived that my labor would be well repaid, for an old vulture was sitting on a naked prominence with her young about her, whom she was instructing in the arts of a vulture's life; and this last lecture of hers was apparently a preparation for their final dismissal to the mountains and skies.

"My children," said the vulture, "you will need my instructing the less because you have had my practice before your eyes. You have seen me snatch from the farm the household fowl; you have seen me seize the leveret in the bush and the kid in the pasture; you know how to fix your talons, and how to balance your flight when you are laden with prey. But you remember the taste of a more delicious food. I have often feasted you with the flesh of man."

"Tell us," said the young vultures. "Where man may be found and how he may be known? His flesh is surely the natural food of a vulture. Why have you never brought a man in your talons to the nest?"

"He is too bulky," said the mother. "When we find a man we can only tear away his flesh and leave his bones upon the ground."

"Since man is big," said the young ones, "how do you kill him? You are afraid of the wolf and of the bear. By what power are vultures superior to man? Is man more defenseless than sheep?"

"We have not the strength of man," returned the mother. "And the vulture would seldom feed upon his flesh had not Nature, that devoted him to our nourishment, infused into him a strange ferocity which I have never observed in any other being that lives upon earth."

"Two herds of men," she continued,

"will often meet, shake the earth with noise and fill the air with fire. When you hear noise and see fire, with flashes along the ground, hasten to the place with your swiftest wing, for men are surely destroying one another. You will

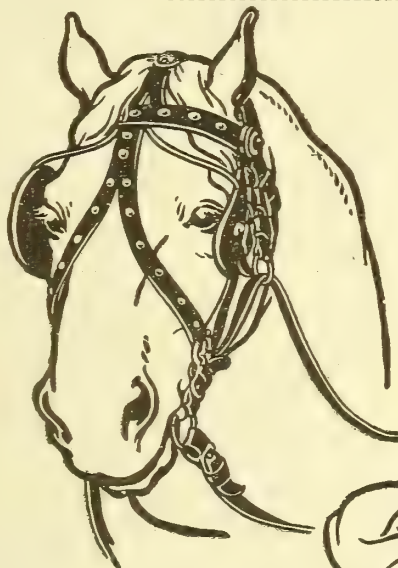

"But when men have killed their prey," said a young vulture, "why do they not eat it? When the wolf has killed a sheep he suffers not the vulture to touch it till he himself is satisfied. Is not man a kind of wolf?"

One of the many "Woods Open Air" houses used to house S. C. Buff Orpingtons at Sunset Poultry Yards, C. E. Siegel, Proprietor, 70 David Ave., Olneyville, R. I.

then find the ground smoking with blood and covered with carcasses, of which many are mangled, for the convenience of the vulture."

"Man," said the mother, "is the only animal who kills what he does not devour, and this quality makes him a benefactor to our species."

Good harness deserves good care; keep the trimmings clean and bright with

Old Dutch

Queen Incubators Built to Hatch Without Trouble

The Queen is built for results—under any and all conditions. We make the assertion that it will produce, year in and year out, better hatches of stronger chicks, with less attention, than any other machine on the market—at any price.

Most any machine will hatch under ideal conditions, but if you are in the poultry business, you can't always have ideal conditions, and you must be protected against the unexpected, such as a sudden drop in temperature. The Queen Regulator will take care of a sudden change of seventy degrees.

Richard Wayne, Gary, Ind., writes: "I have been in the poultry business and used both hot water and hot air machines. I have made a very thorough comparison of 12 different machines, and the Queen is the most thoroughly constructed of all."

Mrs. C. C. Blake, Pocatello, Ida., just starting in the poultry business, writes: "An old poultryman told me I had made a wise choice when I selected the Queen. He has 14 different makes of machines at his large poultry plant, both hot water and hot air. He finds hot water machines far superior to the hot air, and the best hot water machine is the Queen."

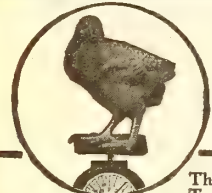

Self-Supporting Egg Tray and Deep Nursery

The Queen is not a cheap machine, but it is cheap for the quality. You can sleep when you have a Queen, as it never sleeps on the job.

FREE
BOOK

"If men kill our prey and lay it in our way," said the young one, "what need shall we have of laboring for ourselves?"

"Because," replied the mother, "man will sometimes remain for a long time quiet in his den. The old vultures will tell you when you are to watch his motions. When you see men in great numbers moving close together like a flock of storks, you may conclude that they are hunting, and that you will soon revel in human blood."

"But still," said the young one, "I would gladly know the reason of this mutual slaughter. I would never kill what I could not eat."

"My child," said the mother, "this is a question which I cannot answer, tho I am reckoned the most subtle bird of the mountain. When I was young I used frequently to visit the eyrie of an old vulture who dwelt upon the Carpathian rocks. He had made many observations; he knew the places that afforded prey round his habitations, as far in every direction as the strongest wing can fly between the rising and the setting sun; and he had fed year after year on the flesh of men."

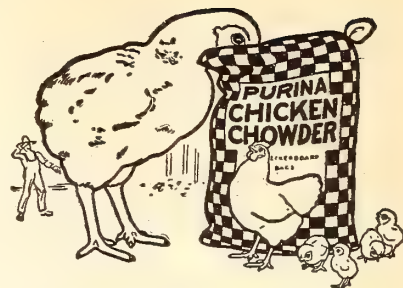

"His opinion was that men had only the appearance of animal life, being really vegetables with a power of motion; and that as the boughs of an oak are dashed together by the storm that swine may fatten on the fallen acorns, so men, by some unaccountable power, are driven one against another till they lose their motion, that vultures may be fed."

"Others think they have observed something of plan and policy among these caterers of ours; and those that hover more closely around them pretend that there is in every herd one that gives directions to the rest, and seems to be more eminently delighted with carnage. What it is that entitles him to such pre-eminence we know not. He is seldom the highest or the swiftest; but such are his eagerness and diligence in providing and preparing food for us that we think the leader of such human herds is entitled to our warmest gratitude, and should be styled the friend of the vultures."

There are a great many people in the world who believe that if they limited themselves to telling the truth, and nothing but the truth, they would stand no chance of being heard. Chiefly for this reason prevarication was invented. Another reason for its coming into common usage is the result of an effort to escape the execution of dire threatenings of unprincipled authorities.

Prevarication will almost without fail attract attention while mere truthful commonplace recitals call forth no applause. In order to get and keep an audience with parents many a child has found it quite necessary to tell a "whopper." The habit grows with time until many adults throught a lifetime are unable to break it.

Fear has been known to make even brave men lie. Why we should hope to inculcate the habit of telling the truth in our children by "scare" methods is difficult to determine. Yet in many families this method is in use today. If a child cannot be lead to tell the truth by other means than that of frightening him, better let him lie for awhile until he is able to see the futility of telling untruths. But in the meantime encourage him to tell the truth by showing an

Chicken Chowder Makes Chesty Chix

Something more than grain feed is necessary to properly mature a chick. Purina Chicken Chowder is a scientific combination of the necessary ingredients, such as linseed meal, granulated meat, alfalfa flour, bran, etc. Use with Purina Chick Feed for quick results. Chicks reach the laying period earlier, are stronger and less subject to disease.

Purina Poultry Feeds are sold only in checker-board bags by leading dealers.

CHAS. L. STILES, Columbus, Ohio

interest in his truthful recitals of the most ordinary happenings.

It would seem that falsifying should not be necessary to attract the attention of a parent to his child's recital of that which, to the child at least is of absorbing interest—but such is frequently the case.

Not long ago we had occasion to witness the following happening:

On a very busy morning Auntie had her bright little six-year-old nephew in charge, and having given him various playthings, hoped to devote an hour undisturbed to straightening out some accounts. The first ten minutes passed without interruption, but at the end of that time a brilliant idea entered the head of the youthful charge relating to something which he had seen at the circus and which he desired above all things in the world to impart to his aunt.

"I cannot listen to you now, dear. You will have to wait awhile." Silence lasting seven minutes.

"Auntie, I only wanted to tell you about an elephant—"

"My dear, you must not tell Auntie about that now. I could not be interested in that as my mind is on this important work."

Silence lasting three minutes.

"Auntie, how long do you have to keep your mind on that?"

"I must keep at this until it is finished, unless something very important should come up to call me from it. Now do be a good boy."

Silence lasting full nine minutes.

"Auntie, you better listen to *this*, for I'm goin' a tell a lie."

"A what?"

"A lie! It's goin' a be a whopper too. You better listen to it."

And the outcome of the matter was that Auntie put up her accounts and prepared to listen and incidentally to discuss the ethics of telling lies.

"It's all right to tell a lie, Auntie, if you tell first that you're a goin' to tell one," stoutly affirmed the six-year-old. "But I know a boy, and a big boy too, who lives in our block, who told one once and never said it was a lie!"

Which fact Auntie did not attempt to dispute.

* * *

The following recipes were recommended by Mr. and Mrs. Thomas Rigg, Iowa Falls, Iowa, clipped from *Gleanings in Bee Culture*.

HONEY FRITTERS.

One cup sour milk with soda, or sweet milk and baking powder; 2 eggs, $\frac{1}{2}$ cup of honey, extracted; one scant tablespoonful of lard; one scant teaspoonful of salt; flour for stiff batter; fry in deep fat, dipping with teaspoon. Serve with extracted honey, slightly warm.

HONEY TARTS.

Make rich pie crust; cut out the center of two rounds; cut with biscuit cutter; place one, without cutting, on the bottom; bake light brown; fill with the following: One cup honey, extracted; $\frac{1}{2}$ cup of butter; one whole egg; extract of lemon, or juice of one. Fill just before using, and sprinkle with nuts or whipped cream. This is fine for lunch.

HONEY SHORTCAKE.

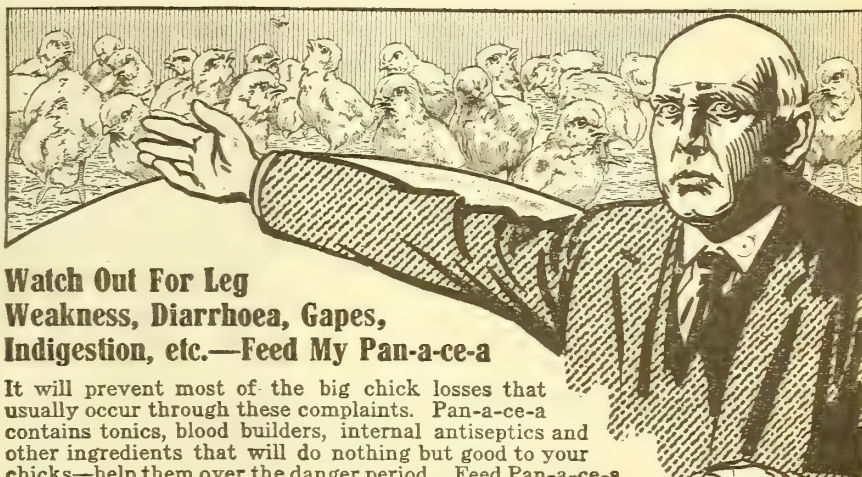

One quart flour; 2 teaspoonfuls baking powder; $\frac{1}{4}$ teaspoonful of soda; heap-

ing tablespoonful of lard; a little butter. Mix soft with sour milk. Bake in a square cake tin. Split and fill with the following: One pint of cream, whipped with a little powdered sugar; one cup honey; white of egg; add a little lemon juice; whip lightly and spread on the cake, spreading first the honey whip, then cream, heaping the cream on top; after first spreading the honey whip, nuts may also be used if liked, and you can omit the lemon, or use with fruit. Tart fruit is best.

FILLING FOR CAKE.

The following is good for cake filling, and makes nice sandwiches, or may be used as sauce for pudding. It is also fine by leaving out lemon and egg for hot cakes, waffles, or toast softened with little milk or cream.

One heaping tablespoonful of butter; one teaspoonful of lemon juice; white of one egg; one cup honey extracted. Beat the egg very light; add butter; add honey; beat again; then lemon last. Beat hard as you add each ingredient.

Watch Out For Leg Weakness, Diarrhoea, Gapes, Indigestion, etc.—Feed My Pan-a-ce-a

It will prevent most of the big chick losses that usually occur through these complaints. Pan-a-ce-a contains tonics, blood builders, internal antiseptics and other ingredients that will do nothing but good to your chicks—help them over the danger period. Feed Pan-a-ce-a now—read this guarantee: So sure am I that

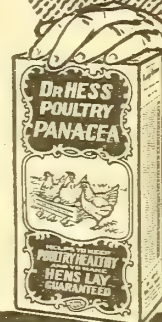

Dr. Hess Poultry Pan-a-ce-a

A Tonic—Not a Stimulant

will help your chicks grow—help them safely to maturity—help to make your poultry healthy and your hens lay—that I have told my dealer in your town to supply you with enough for your flock, and if it doesn't do as I claim, return the empty package and get your money back. COLUMBIAN PLYMOUTH ROCKS.

A Few Facts from First Hand Information.

By LOUIS PAUL GRAHAM.

WITHIN the last few years, this variety, which at best is a new one, being only a trifle over 10 years old, has rapidly forged to the front among the American breeds, both in egg production, early maturity and ex-

laying maturity. Some as early as five months and a few days old, and it is noteworthy that these pullets attained full size. In most breeds, not excepting the Leghorns, it is generally understood that a precocious early laying pullet is usually deficient in size and stamina and the personal experiences of the writer with several breeds bears this out, excepting in the instance of the Columbian Plymouth Rocks. As a case in point: A pullet hatched on August 10th laid her first

COLUMBIA QUEEN.

A Columbian Rock hen with a trap-nested record of 286 eggs in one year.

cellent table qualities at all ages.

The consensus of opinion seems to be that this variety has proven to possess more good qualities than any of its other Plymouth Rock cousins, and as a profitable and handsome utility fowl is running very close to the famous White Wyandottes.

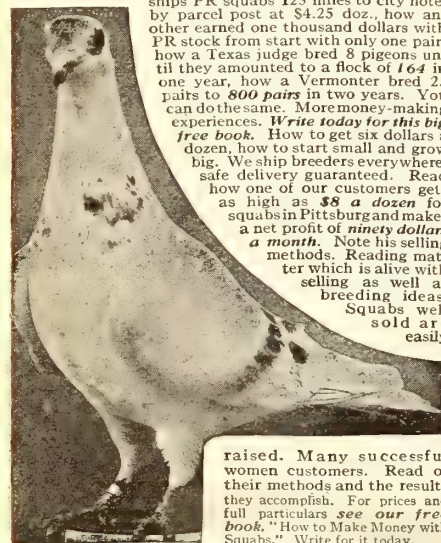

Many instances are noted of early

egg the following January 15th and this pullet maintained a high average egg production for the year following; she also attained full size, weighing 8½ pounds the following fall. Her average fertility for that first season was 87%, and what is best, the fertile eggs hatched.
